

Measurement of the $D^0 \rightarrow \phi\eta$, $D^0 \rightarrow \omega\eta$ and $D^0 \rightarrow K^*\eta$ Branching Fractions

Friday 17 July 2009 16:45 (15 minutes)

We present updates on the searches for three $D^0 \rightarrow V\eta$ decays, where the D^0 comes from the decay $D^{*+} \rightarrow D^0\pi^+$ and V is a ϕ , ω or K^* vector meson. These results use a 467fb^{-1} data sample collected with the SLAC-BABAR detector at SLAC.
