

# Cross feeds update

Included muDBelle $<0.98$ , eDBelle $<0.98$  in pi+ cuts

Training and testing on the different signal sample

19/11/2024

# Introduction

- Trained the BDT on 1.0 M B  $\rightarrow$   $K\tau(\pi)\ell$  sample.
- Tested the BDT on 5.0 M B  $\rightarrow$   $K\tau\ell$  sample.
- Still a lot of things to implement (from technical point of view).

# Basic distributions

# Basic distributions cont.

# BDT distribution for signal

Bdt>0.10
