

CMS synergies with the EIC, plus femtoscopy

Wednesday 24 September 2025 09:25 (25 minutes)

In this talk we review CMS results on photoproduction (coherent and incoherent) of vector mesons and open charm in ultra-peripheral collisions, on double pomeron scattering, as well as on exclusive photon fusion in pp. At the end of the talk, we also discuss femtoscopy and its relevance at EIC.
