

Linked Open Data and Its Potential for CREDO

Friday, 5 October 2018 12:00 (20 minutes)

Linked Open Data (LOD) is a network of open and reusable information resources. It contains e.g. encyclopedic, geographical, bibliographic, and government data, but more importantly scientists from various domains already share their data in this way, especially life sciences, medicine, and linguistics. This talk will give an introduction to LOD and open a discussion how to use the potential of LOD within the CREDO project.

Presenter: Dr HOMOLA, Martin

Session Classification: Collaboration Meeting
