

HF jets analysis

18.11.2019 ALICE@IFJ meeting

Sebastian Bysiak

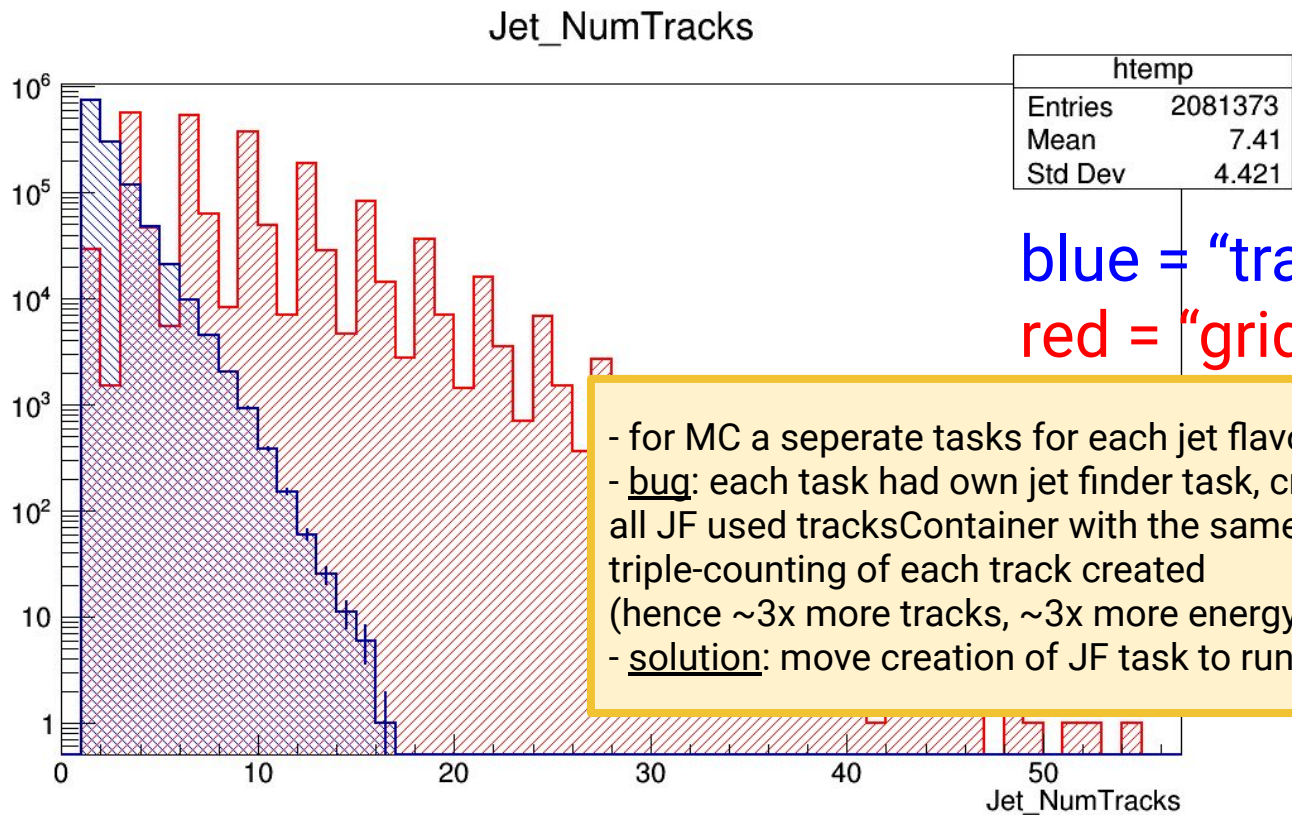

Outline

1. What was done
2. Issues and questions
3. Plans for next week

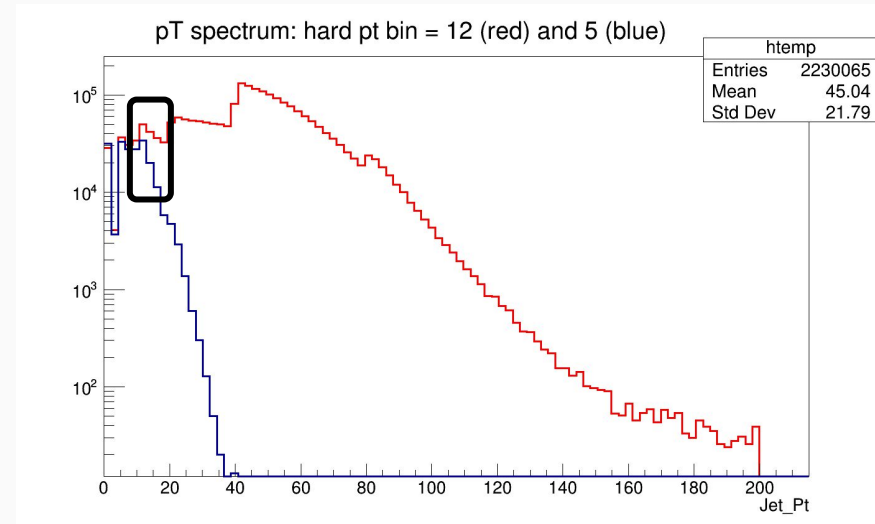

- 1. What was done**
2. Issues and questions
3. Plans for next week

Blocker from last week solved!

What is the MC I should compare to?

- MC simulated in hard pT bins
- for each hard pT bin we obtain whole spectrum of reconstructed jets' pT, starting from low values and actually not ending around hard pT bin end
(bin 5: 16-21 GeV, bin 12: 85-99 GeV)

- Q: If jets generated in different hard pT bins are distinguishable?
- *Same differences may appear due to different pT spectrum shape in considered jet pT bin*

jet reco. pT

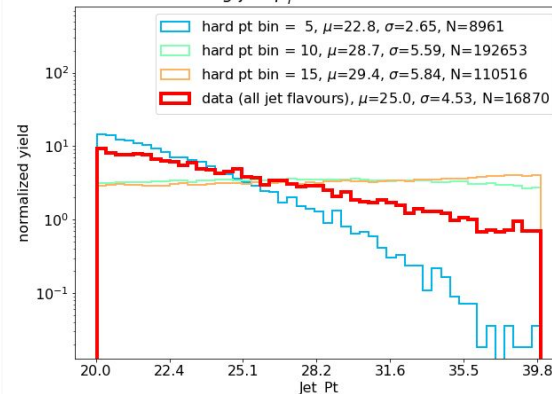

udsg jets $p_T^{jet, reco} = 5-10$ GeV

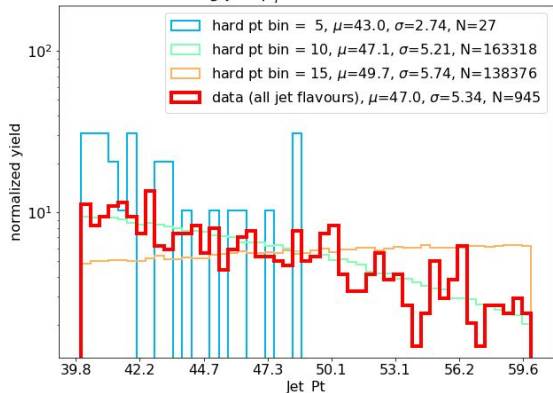

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

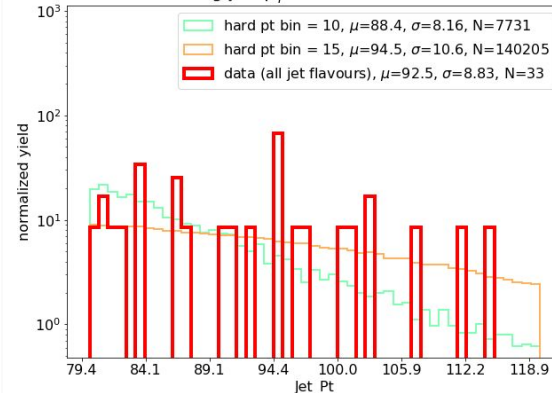

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-100$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

properties of events (in which jets were found)

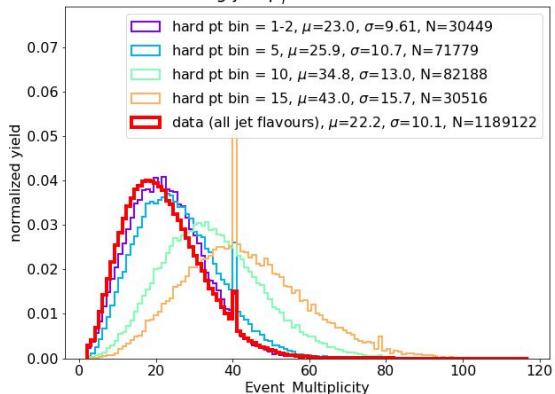

event multiplicity

relatively large diff. between ptbins
softer ptbins consistent with data

udsg jets $p_T^{jet, reco} = 5-10$ GeV

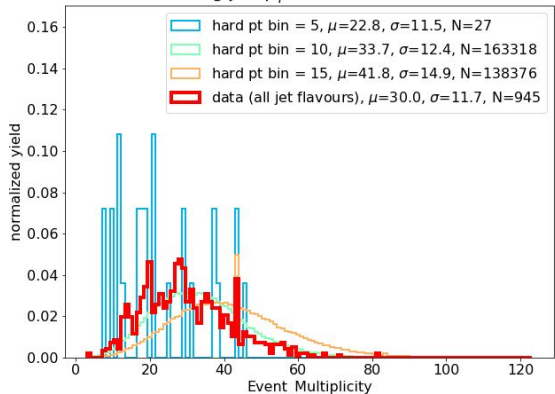

udsg jets $p_T^{jet, reco} = 10-20$ GeV

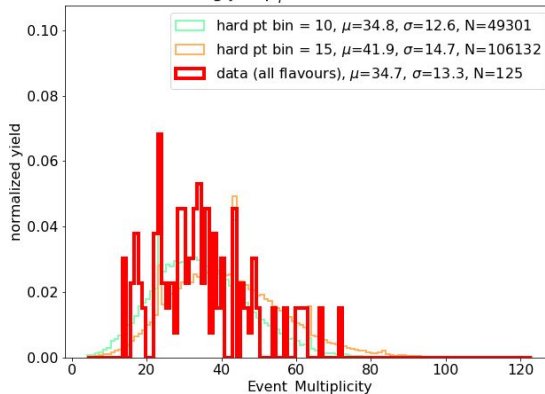

udsg jets $p_T^{jet, reco} = 20-40$ GeV

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-80$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

event vertex X

all MC ptbins consistent with the data

udsg jets $p_T^{jet, reco} = 5-10$ GeV

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

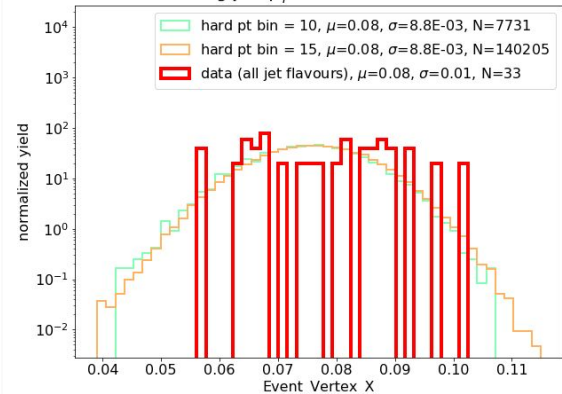

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-80$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

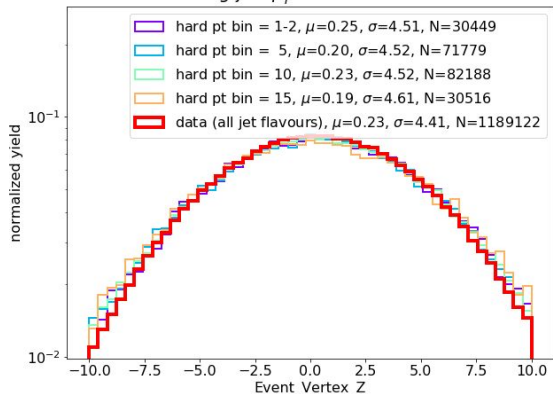

event vertex Z

all MC ptbins consistent with the data

udsg jets $p_T^{jet, reco} = 5-10$ GeV

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-80$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

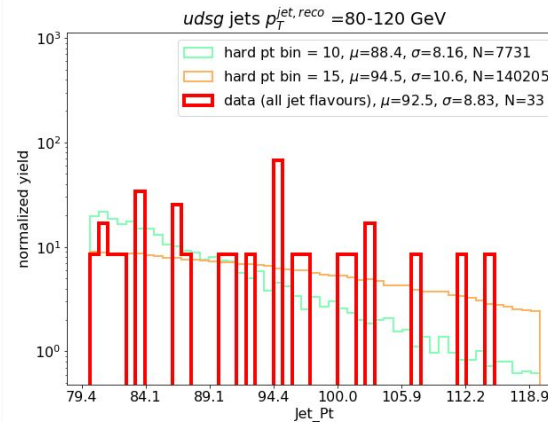

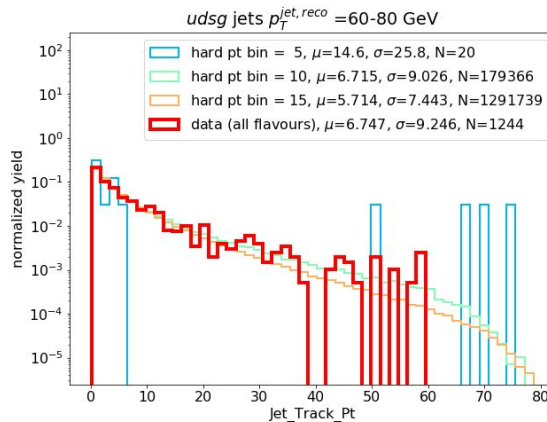

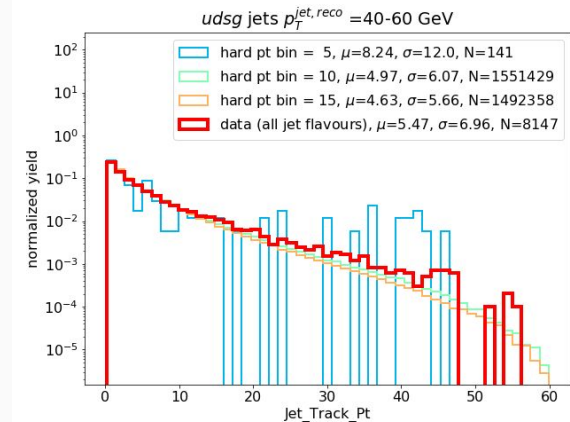

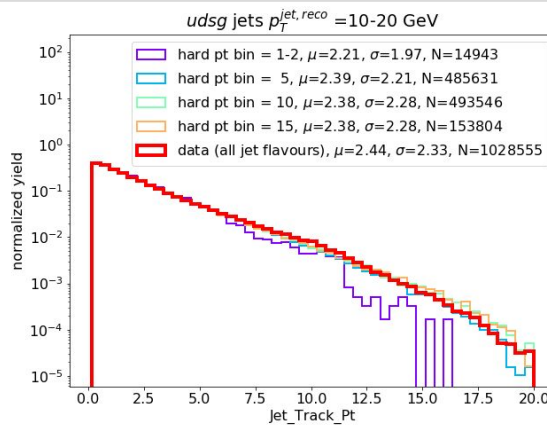

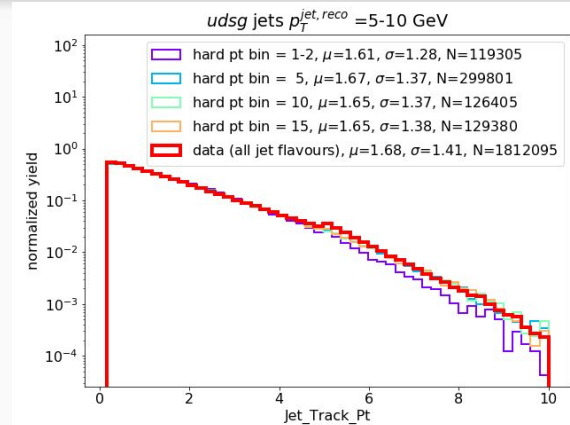

properties of tracks (belonging to jets)

track's pT

all MC ptbins similar and consistent with the data

track's IPd

all ptbins similar but much ($> \text{factor } 2$)
wider distributions than in data - PRO8L3M as it's one
of most important variables

usdg jets $p_T^{\text{jet, reco}} = 5-10 \text{ GeV}$

usdg jets $p_T^{\text{jet, reco}} = 10-20 \text{ GeV}$

usdg jets $p_T^{\text{jet, reco}} = 20-40 \text{ GeV}$

usdg jets $p_T^{\text{jet, reco}} = 40-60 \text{ GeV}$

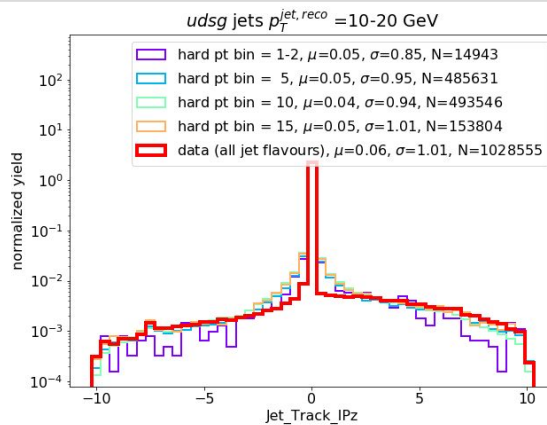

usdg jets $p_T^{\text{jet, reco}} = 60-80 \text{ GeV}$

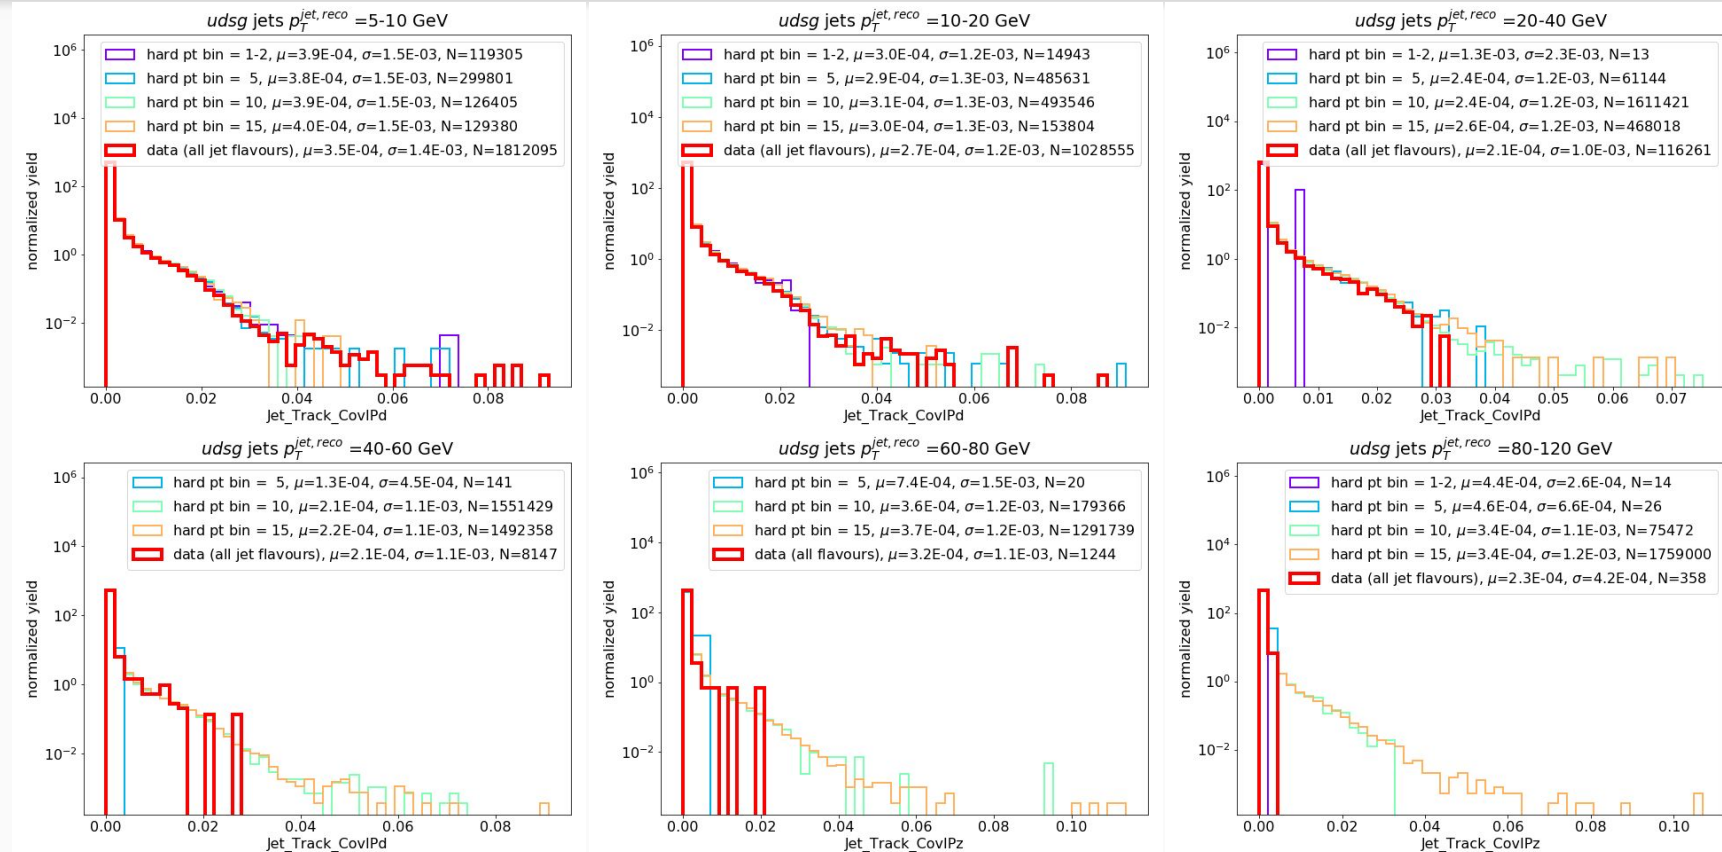

usdg jets $p_T^{\text{jet, reco}} = 80-120 \text{ GeV}$

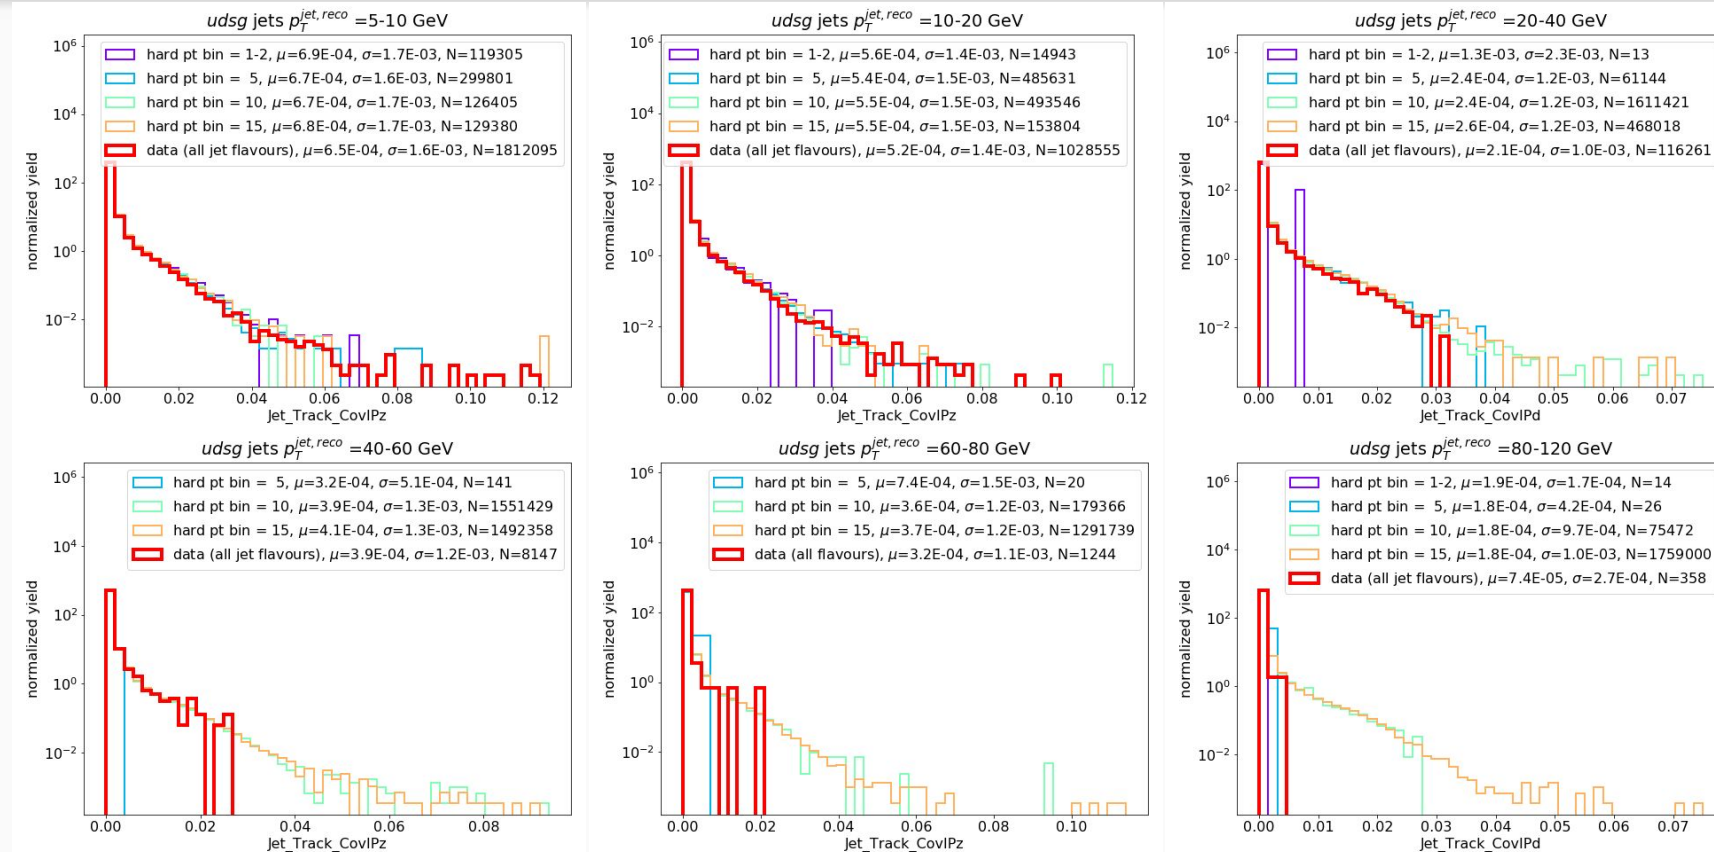

track's IPd sigma

all ptbins similar and consistent with the data

track's IPz sigma

all ptbins similar and consistent with the data

properties of jets

jet reco. pT

large diff. between ptbins, data has slope similar to one,
specific ptbin depending on reco. pT range

udsg jets $p_T^{jet, reco} = 5-10$ GeV

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-100$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

jet multiplicity

softer ptbins consistent with the data
some diff. between ptbins

udsg jets $p_T^{jet, reco} = 5-10$ GeV

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-80$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

jet area

softer ptbins consistent with the data,
significant diff. at low jet area

udsg jets $p_T^{jet, reco} = 5-10$ GeV

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-100$ GeV

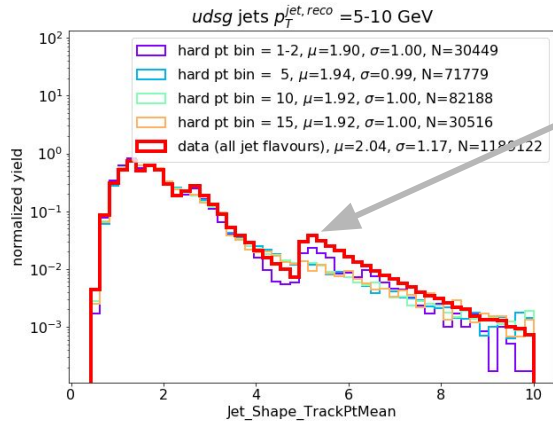

udsg jets $p_T^{jet, reco} = 80-120$ GeV

Jet trackMeanPt

reasonable consistency

- holes due to 1-track jets
- min. pT of hardest track(?)

jet momentum dispersion

data slightly shifted towards higher values, softer ptbins closer

udsg jets $p_T^{jet, reco} = 5-10$ GeV

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-80$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

jet angularity

data slightly shifted towards lower values, harder ptbins closer

udsg jets $p_T^{jet, reco} = 5-10$ GeV

udsg jets $p_T^{jet, reco} = 10-20$ GeV

udsg jets $p_T^{jet, reco} = 20-40$ GeV

udsg jets $p_T^{jet, reco} = 40-60$ GeV

udsg jets $p_T^{jet, reco} = 60-80$ GeV

udsg jets $p_T^{jet, reco} = 80-120$ GeV

1. What was done
- 2. Issues and questions**
3. Plans for next week

Issues and questions

- How various hard p_T bins should be merged?
based on cross section dependence of p_T process?
One value per hard p_T bin?

1. What was done
2. Issues and questions
- 3. Plans for next week**

Plans for next week

- QA: plot $N_{\text{jets}}/N_{\text{events}}$ run wise (data & MC)
- investigation of differences data - MC mainly for IPd and IPz
 - do tails come from secondaries? if checking origin process is impossible then check production vertex vs IPd/z
 - plot: IP in bins of track p_T
- at least 1 track with $p_T > 5\text{GeV}$ -- used only in data?
- plot: Jet_Area vs Jet_NumTracks -- low area jets are the 1-track-jets?

BACKUP & MC--MC comparison

```
lower_edges=( 5 7 9 12 16 21 28 36 45 57 | 70 85 99 115 132 150 169 190 212 235)
higher_edges=( 7 9 12 16 21 28 36 45 57 70 | 85 99 115 132 150 169 190 212 235 -1)
```

momentum dispersion:
$$p_T D = \frac{\sqrt{\sum_{i \in jet} p_{T,i}^2}}{\sum_{i \in jet} p_{T,i}}$$

angularity:
