

Adam Kisiel

Joint Institute for Nuclear Research

Warsaw University of Technology

for the MPD Collaboration

The MPD Experiment and  
the NICA complex:  
Status and physics goals

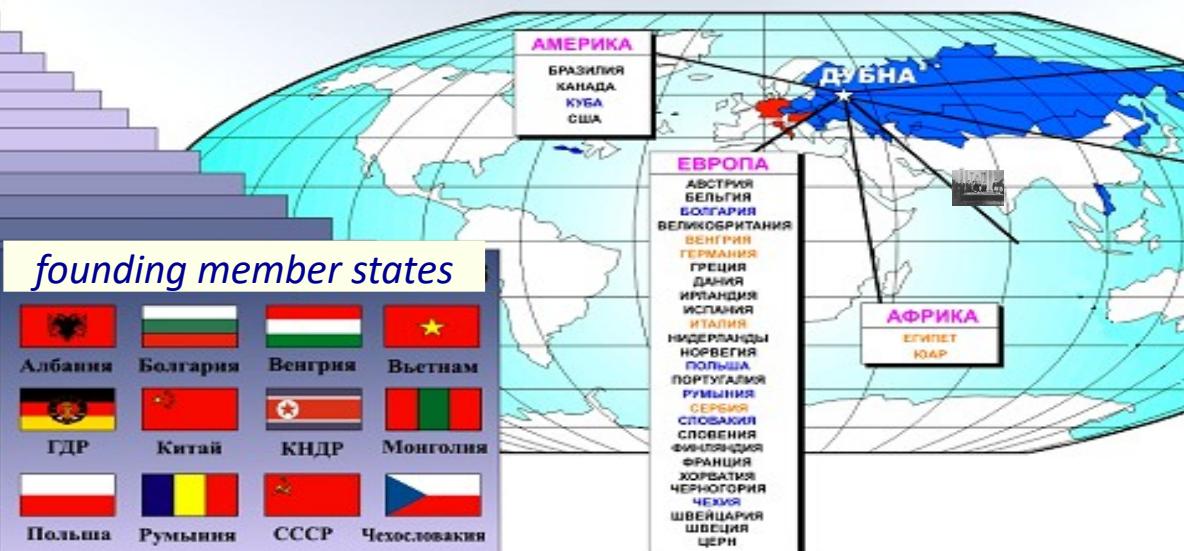

# The Host Institute

**Joint Institute for Nuclear Research (JINR) –  
International Intergovernmental Organization established through the  
Convention of March 26, 1956 by 11 founding States  
and registered with the United Nations on 1 February 1957**

*Governed by the  
Committee of Plenipotentiaries  
representing governments  
of 18 countries*

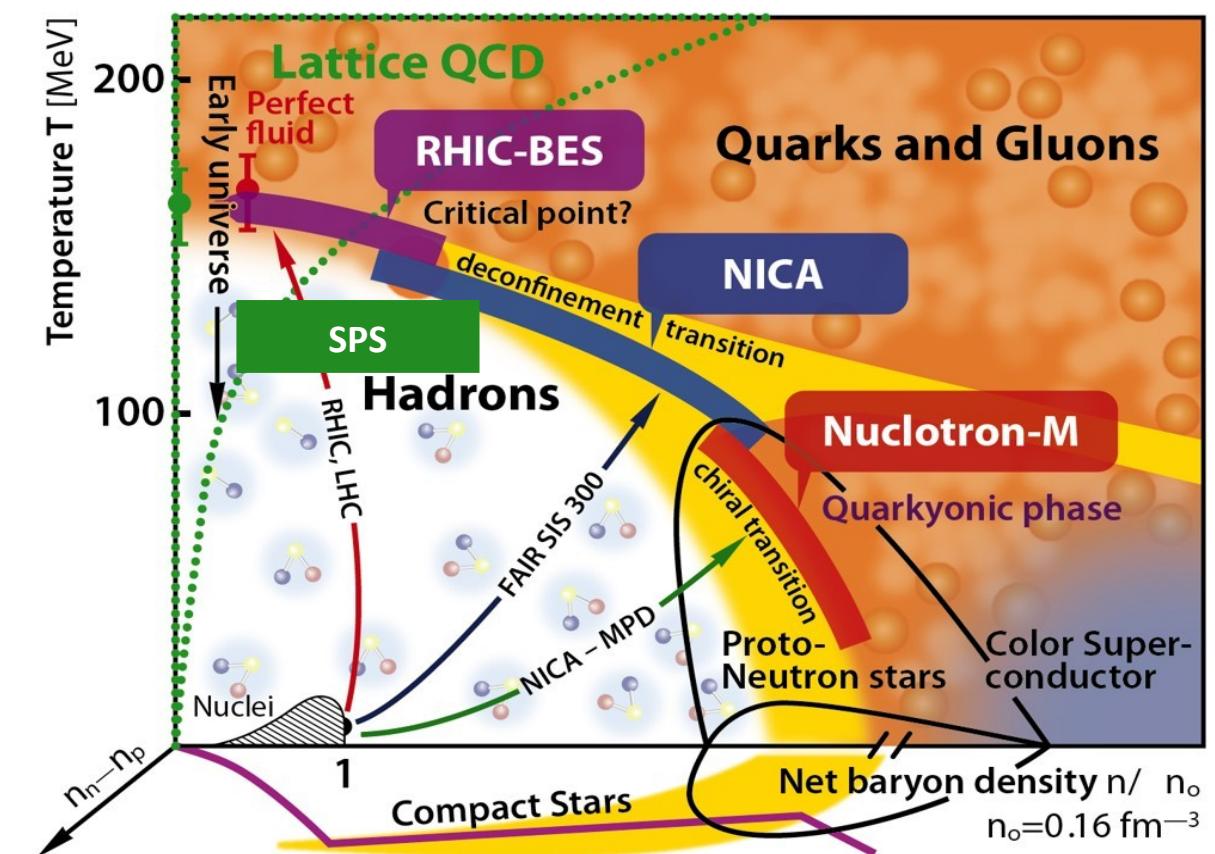

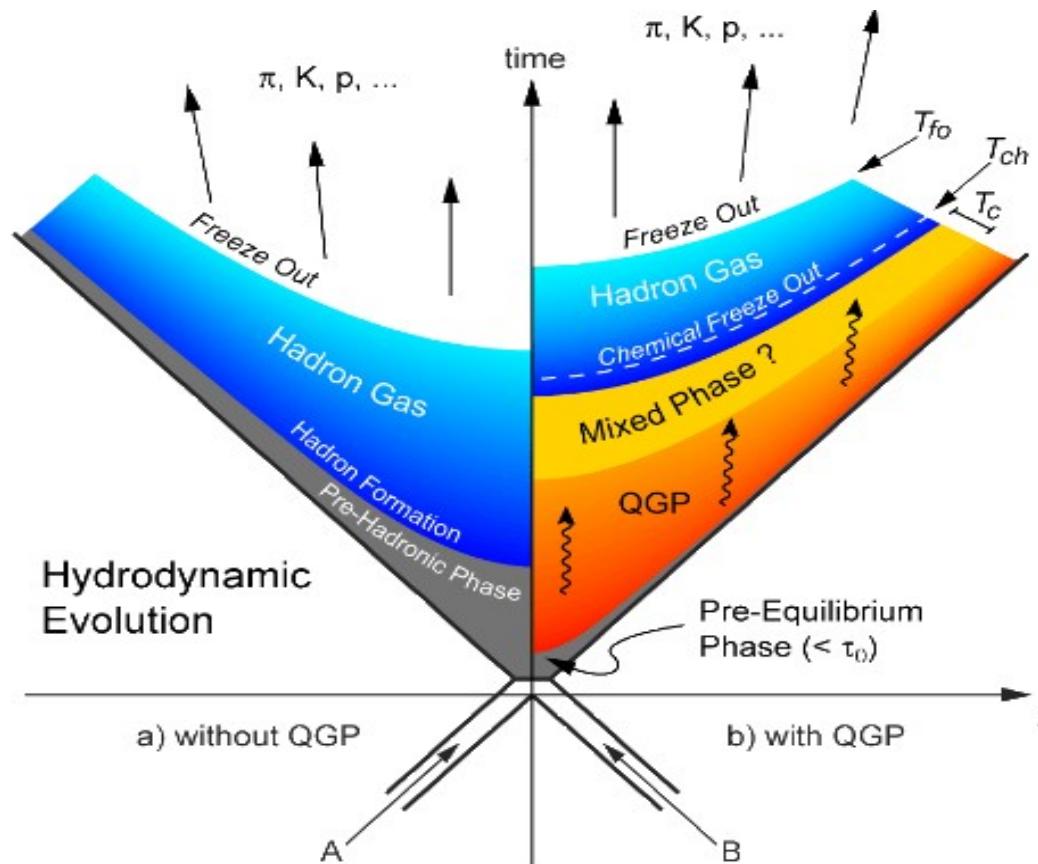

March 26, 1956

# A „Phase Transition” in HIC

- Heavy-ion collisions described in the language of thermodynamics (temperature, “phase transitions”, “chemical potential”, etc.)
- Limited exploration of the region of QCD phase-space at large densities
- Main objective: determination of Equation of State of QCD matter

# Asymptotic freedom of quarks

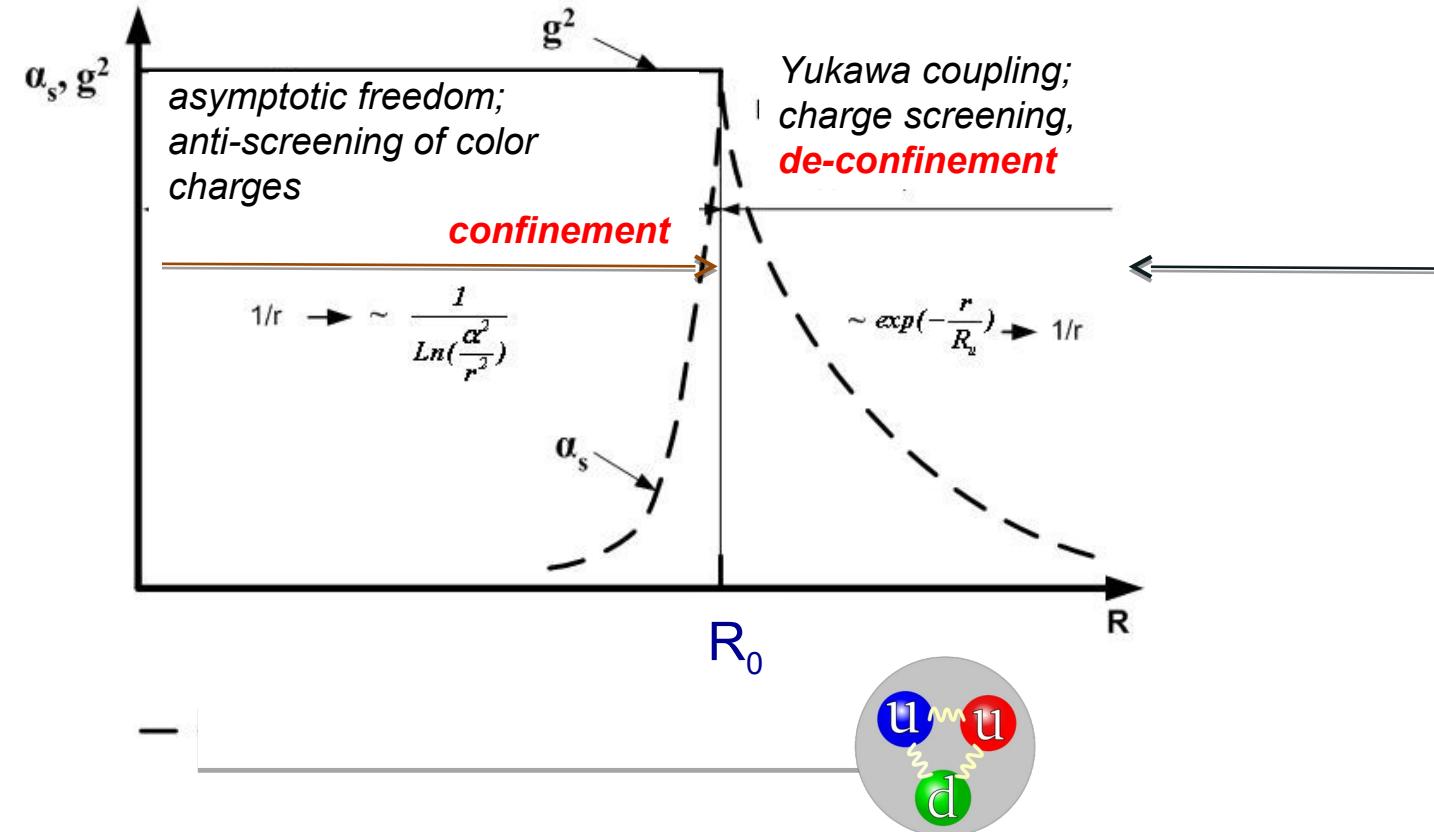

D.J.Gross, H.D.Politzer, F.Wilczek

The regime of “asymptotic freedom” is reached in hard scattering processes at sufficiently high energies,

however, this regime could be available already at rather low energies

in **super dense nuclear matter**  
(the distance between particles  $\sim 1/T$ )

typical size  $R_0 \sim 1 \text{ fm} = 10^{-15} \text{ m}$

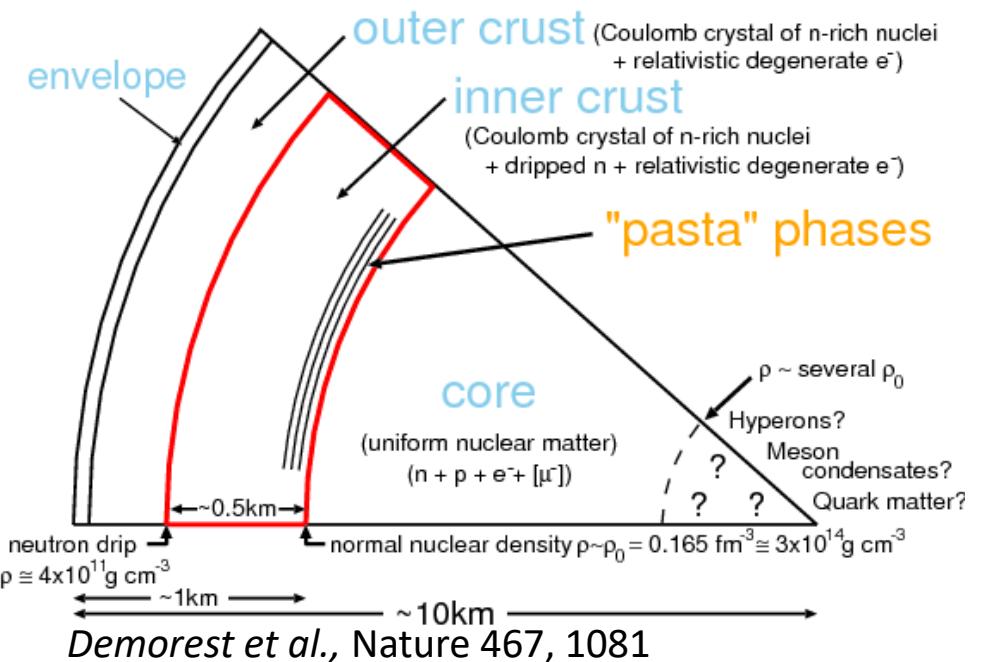

The super dense nuclear matter  
could be obtained in  
heavy ion collisions

# Access neutron star matter in laboratory

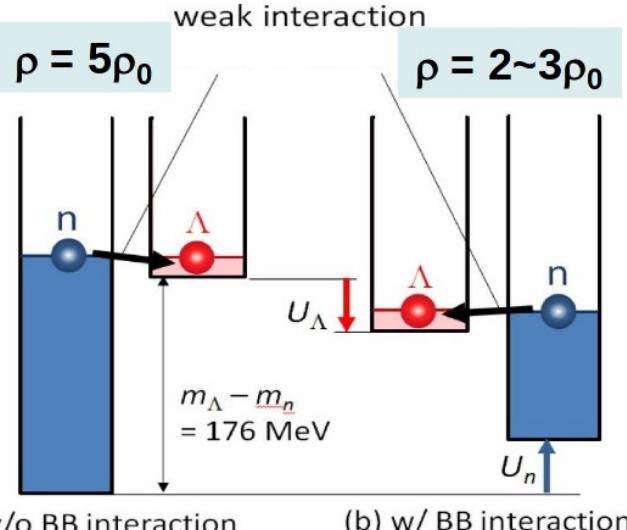

*core of neutron stars reaches density several times nuclear density*

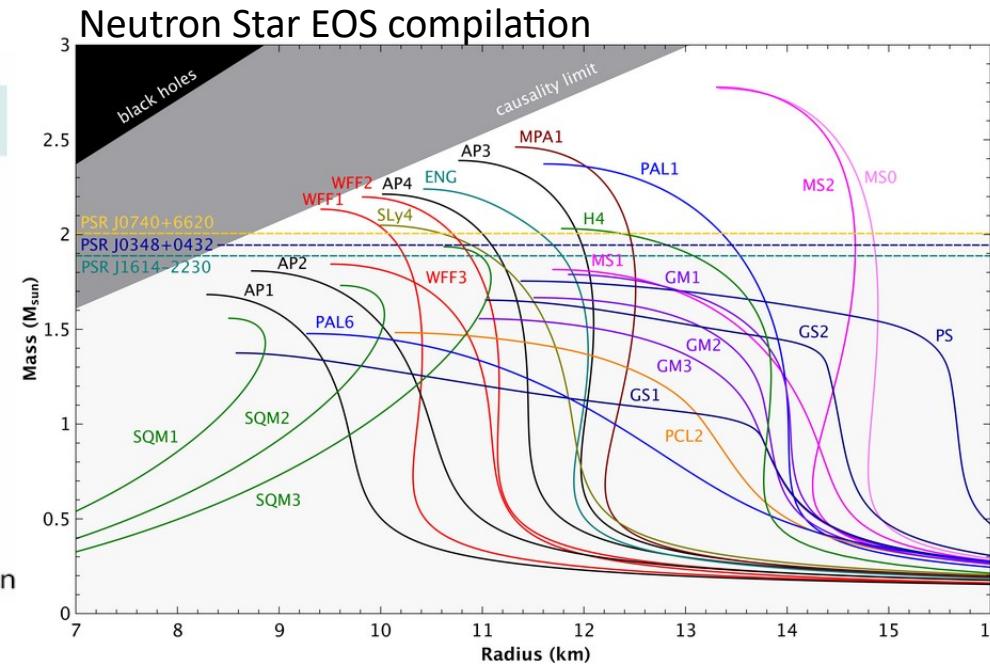

*appearance of strangeness changes Equation-of-State, depends on strangeness-nucleon interaction*

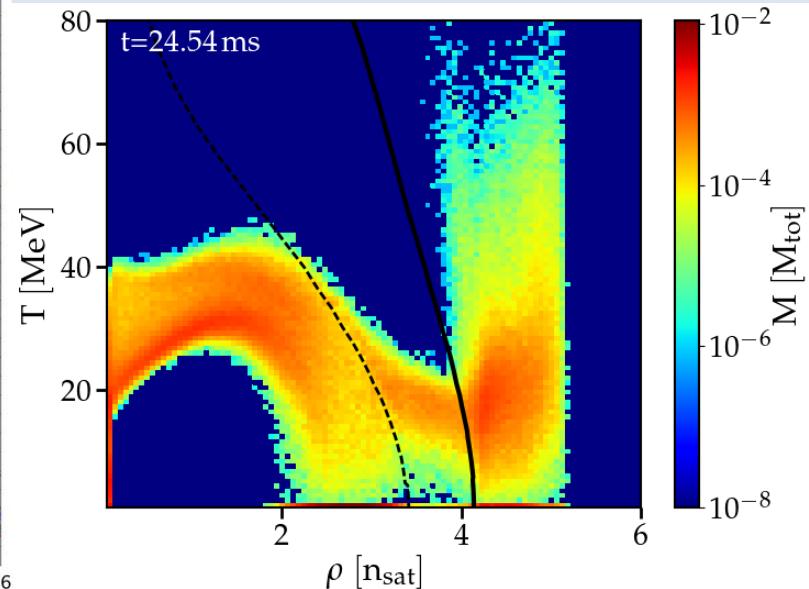

Credit: LIGO Collaboration

H. Tamura, Hadron 2017

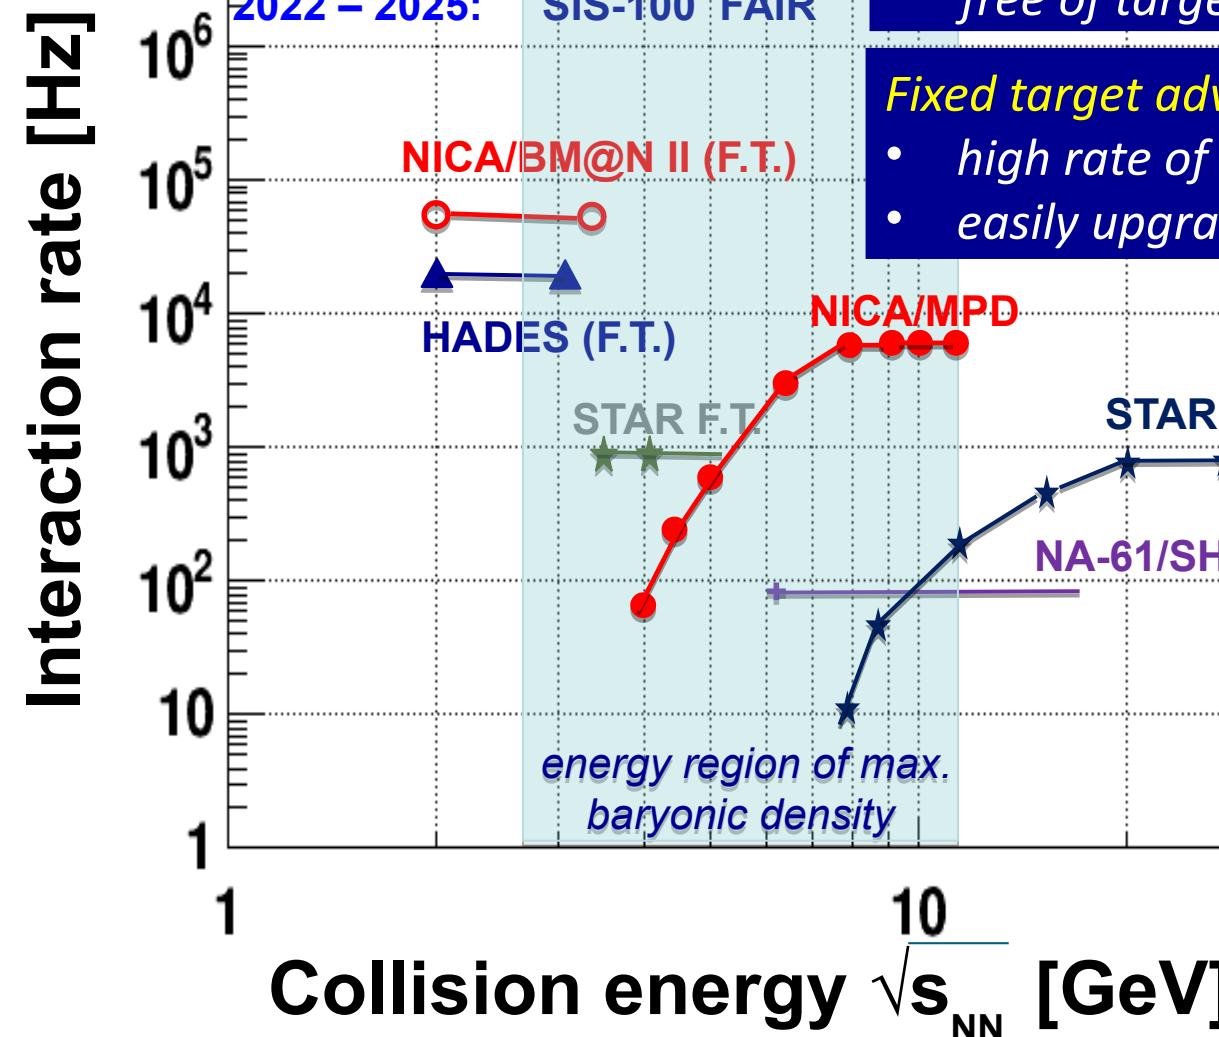

*mergers populate NICA phase space*

Blacker et al., Phys. Rev. D 102, 123023

# NICA: Unique and complementary

*Collider advantage:*

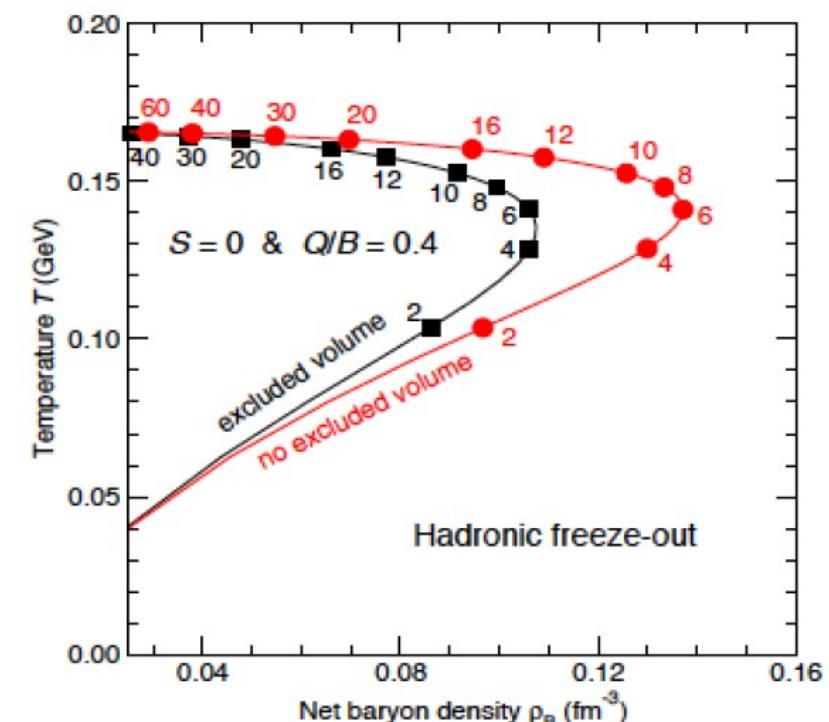

- coverage of max. phase space
- minimally biased acceptance
- free of target parasitic effects

*Fixed target advantage:*

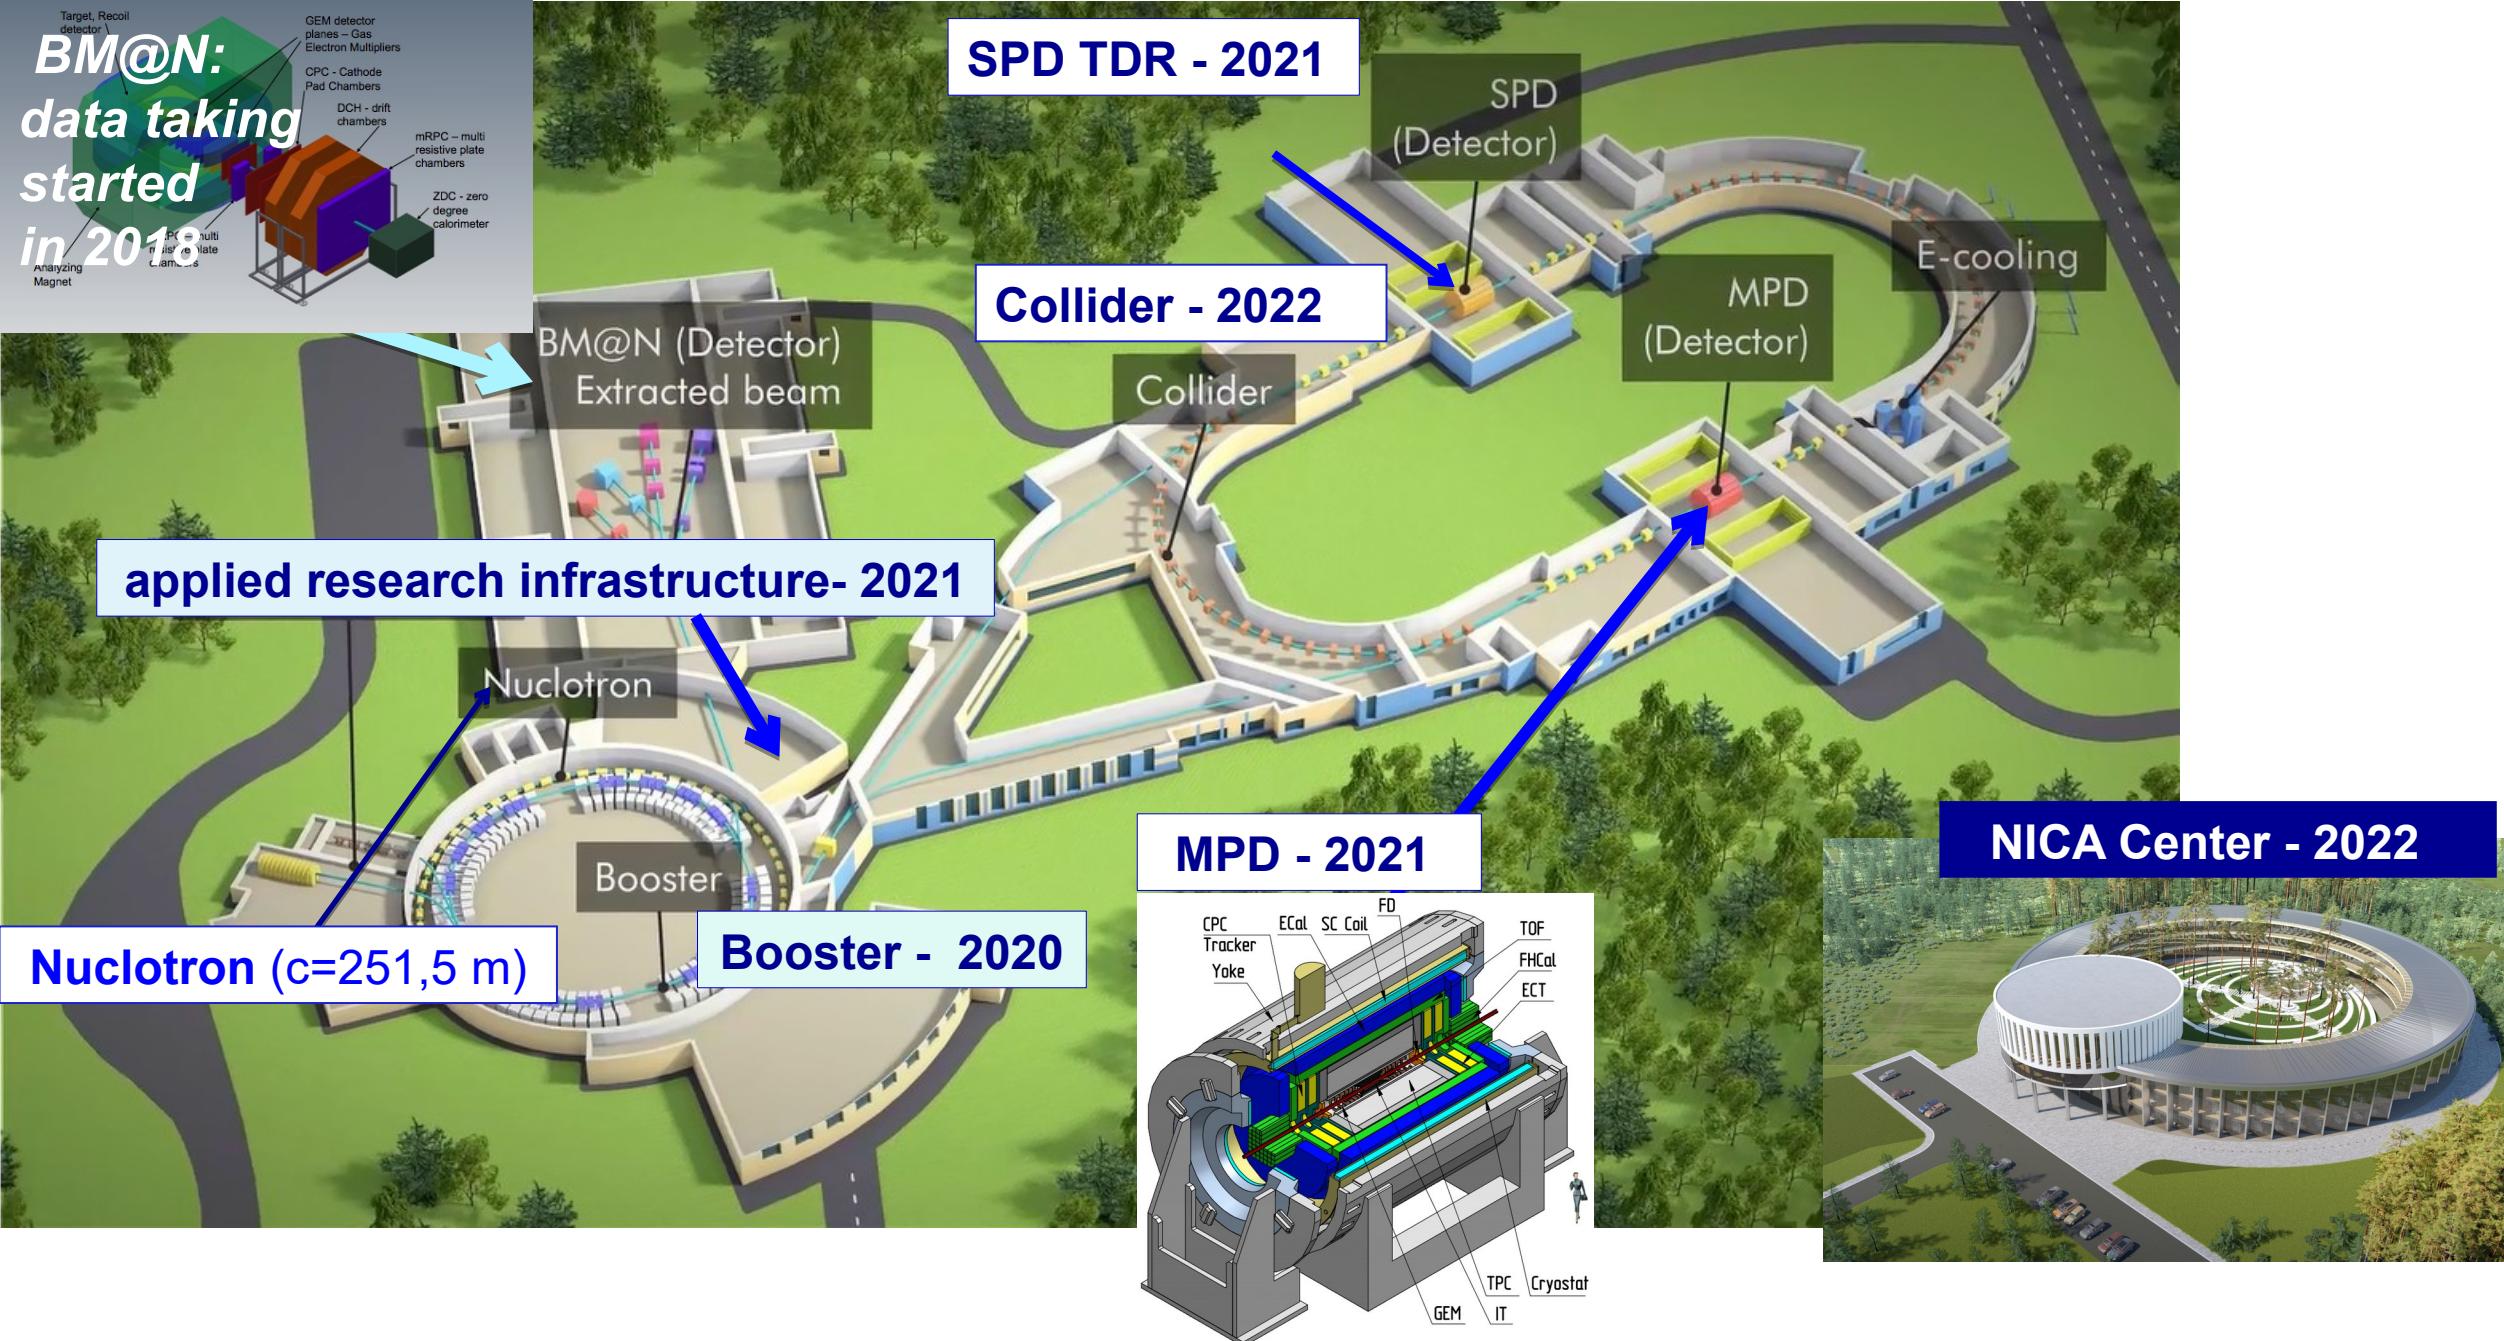

- high rate of interactions
- easily upgradeable

In NICA Collider energy range maximum possible net-baryon density is reached

Highest baryon density at freeze-out for  $s^{1/2} \sim 6$  GeV, slightly lowering with ex. volume

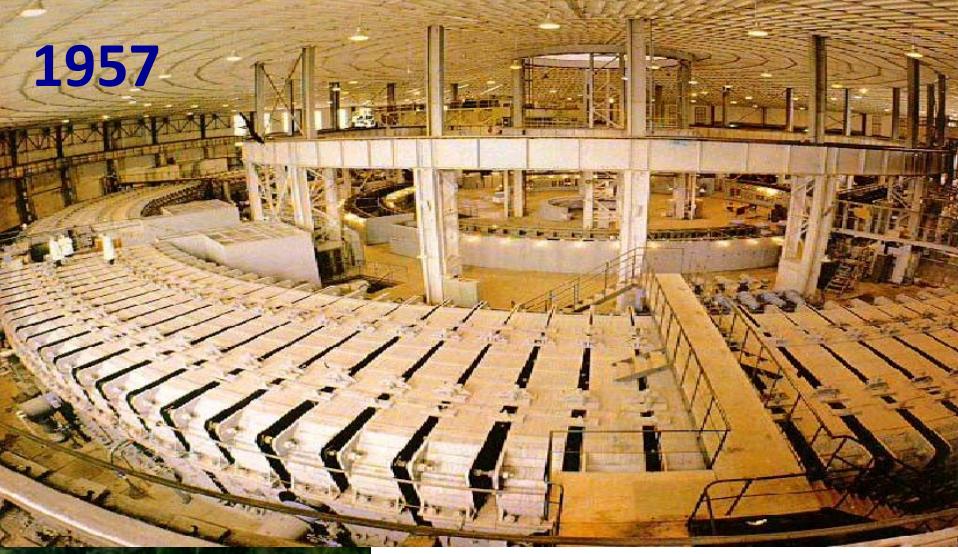

# NICA Accelerator Complex in Dubna

# History of NICA Accelerator Complex

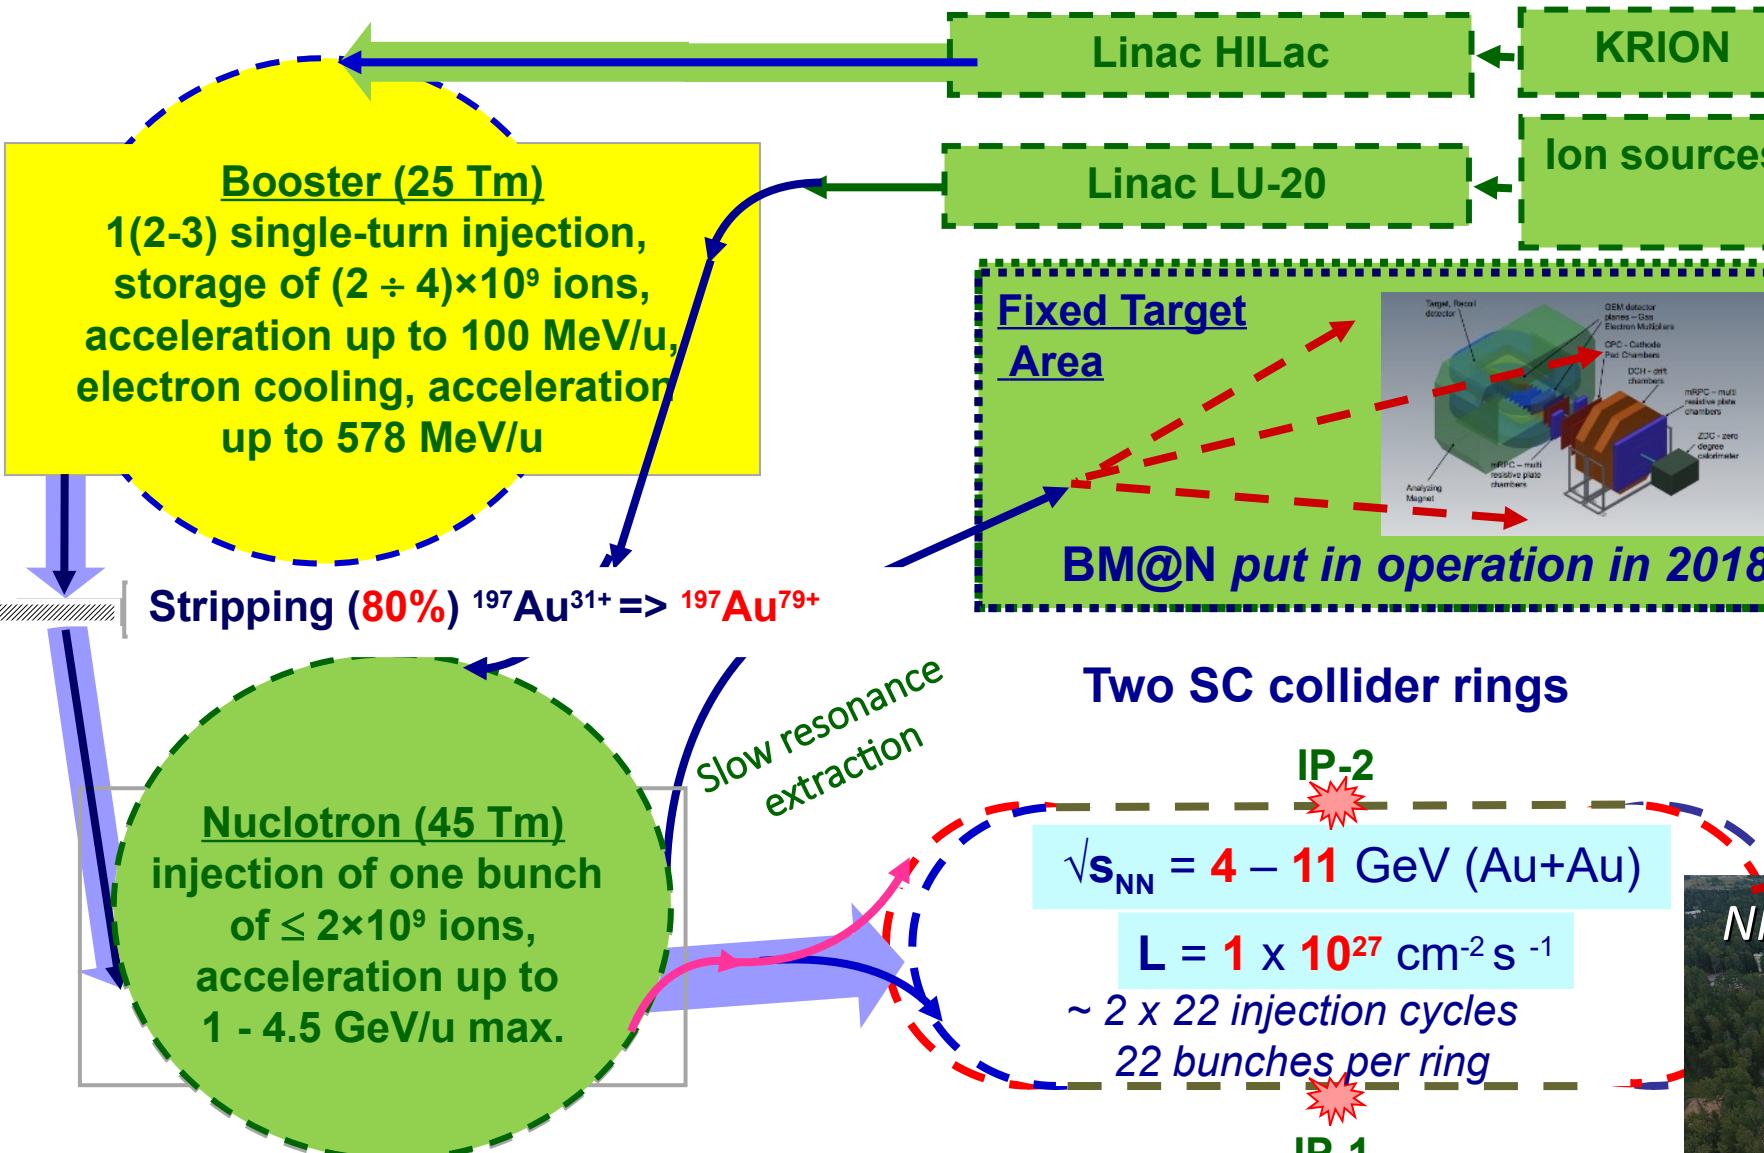

**Synchrophasotron –10 GeV proton synchrotron (1957)**  
*pioneering research in RNP since '70-ties;*

*Veksler and Baldin Laboratory  
of High Energy Physics*

**SC synchrotron- Nuclotron (1993) based on**  
*superconducting fast cycling magnets developed at LHE JINR*

# Status of the Accelerator Complex

work in progress

early commissioning

commissioned / existing

Recent video from NICA: <https://youtu.be/mfOLT9XZOj0>

# NICA construction live

# Main parameters of accelerator complex

## Nuclotron

Parameter	SC synchrotron
particles	$\uparrow p$ , $\uparrow d$ , nuclei (Au, Bi, ...)
max. kinetic energy, GeV/u	10.71 ( $\uparrow p$ ); 5.35 ( $\uparrow d$ ) <b>3.8 (Au)</b>
max. mag. rigidity, Tm	38.5
circumference, m	251.52
vacuum, Torr	$10^{-9}$
intensity, Au /pulse	$1 \cdot 10^9$

## Booster

	value
ion species	A/Z $\leq 3$
max. energy, MeV/u	<b>600</b>
magnetic rigidity, T m	1.6 – 25.0
circumference, m	210.96
vacuum, Torr	$10^{-11}$
intensity, Au /p	$1.5 \cdot 10^9$

## The Collider

### Design parameters, Stage II

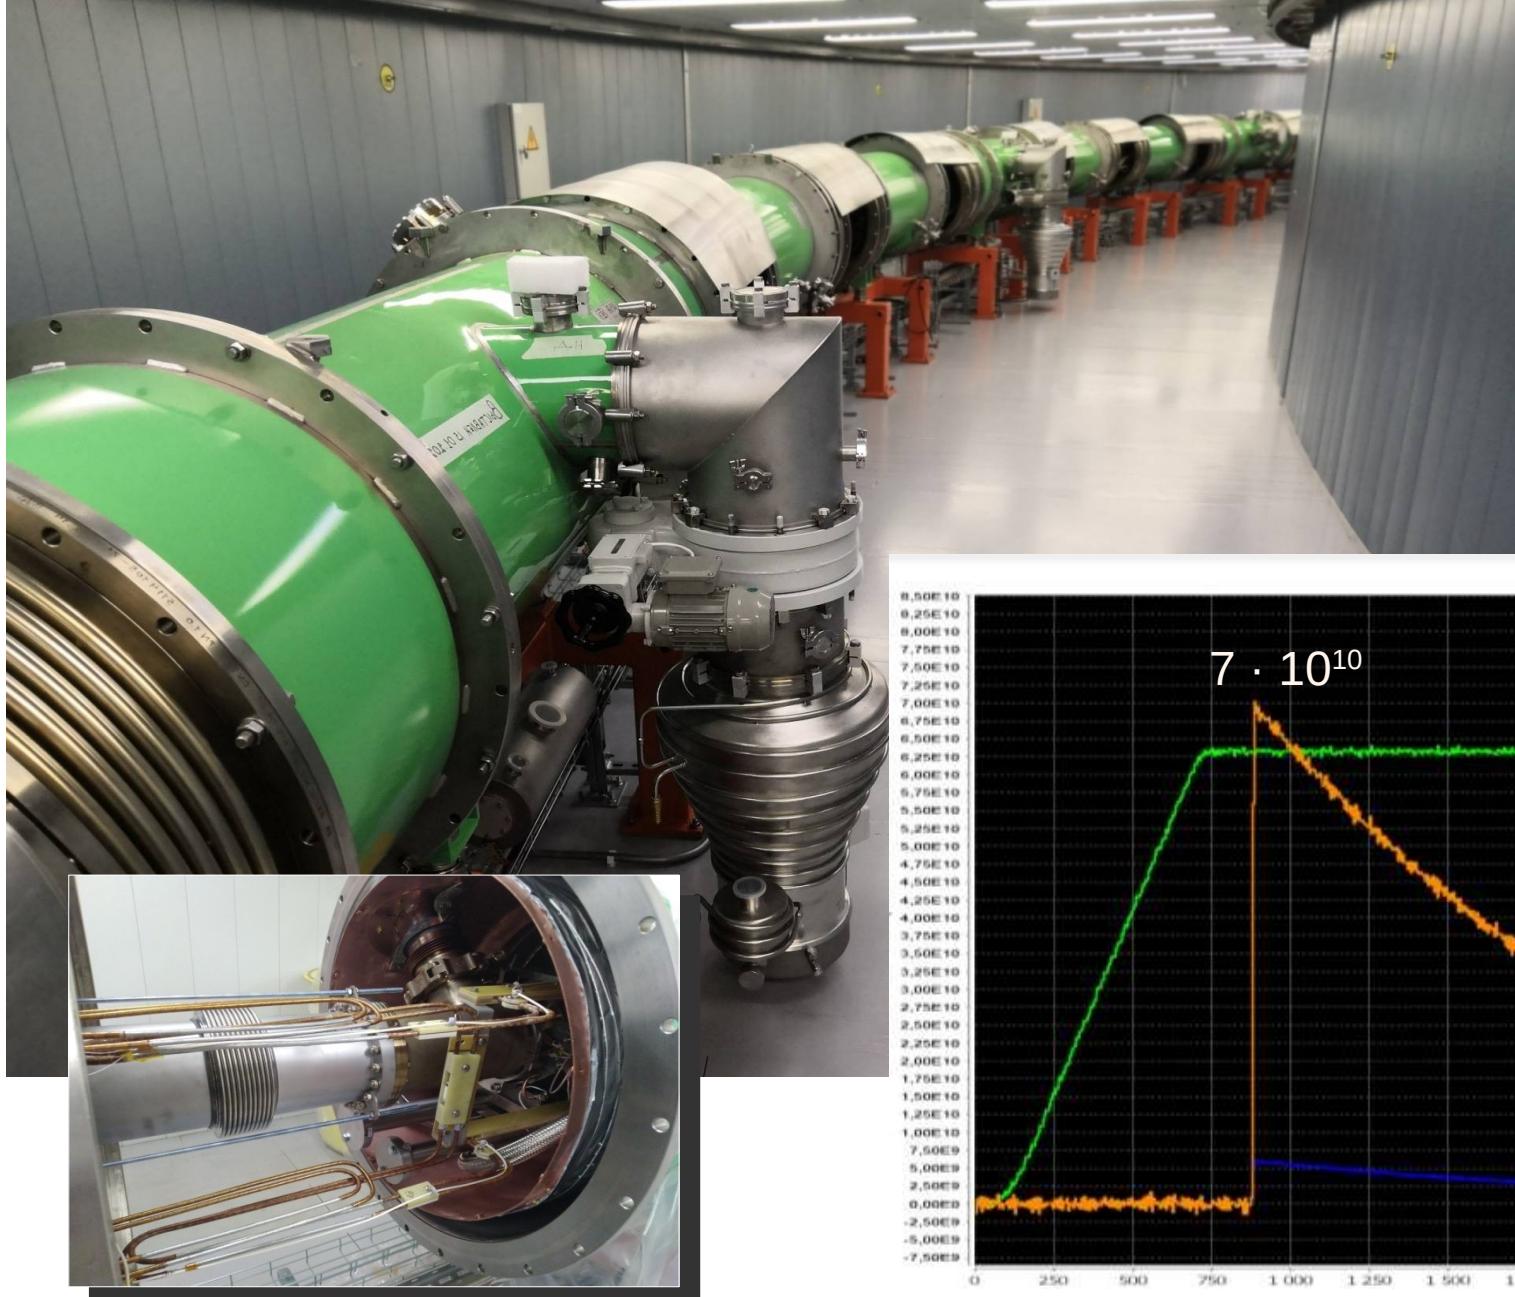

**45 T\*m, 11 GeV/u for Au<sup>79+</sup>**

<i>Ring circumference, m</i>	<b>503,04</b>
<i>Number of bunches</i>	<b>22</b>
<i>r.m.s. bunch length, m</i>	<b>0,6</b>
$\beta, m$	<b>0,35</b>
<i>Energy in c.m., Gev/u</i>	<b>4-11</b>
<i>r.m.s. <math>\Delta p/p</math>, 10<sup>-3</sup></i>	<b>1,6</b>
<i>IBS growth time, s</i>	<b>1800</b>
<i>Luminosity, cm<sup>-2</sup> s<sup>-1</sup></i>	<b>1x10<sup>27</sup></b>

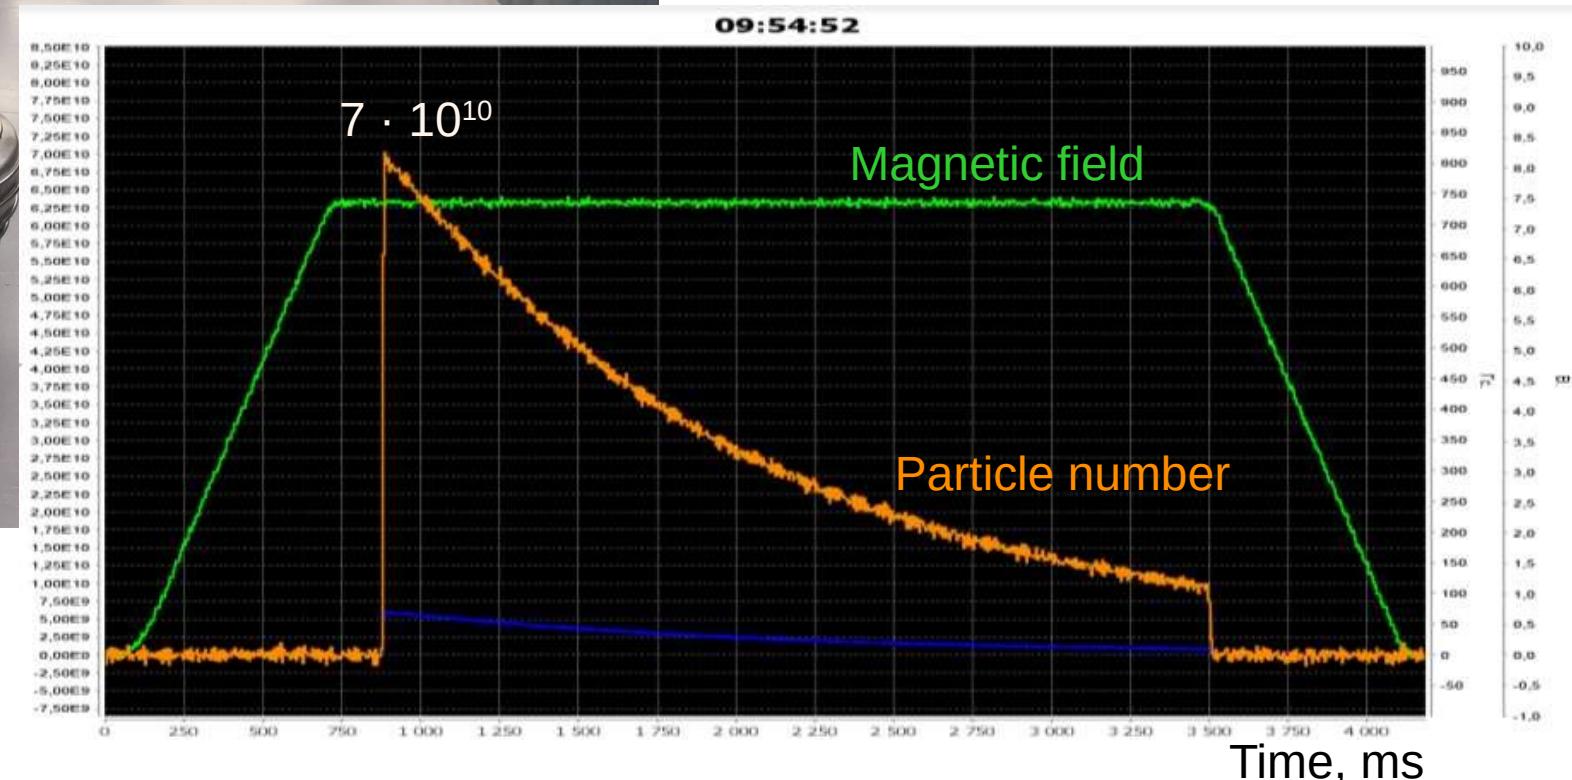

### Stage I:

- *without ECS*
- *reduced number of RF*
- *reduced luminosity*

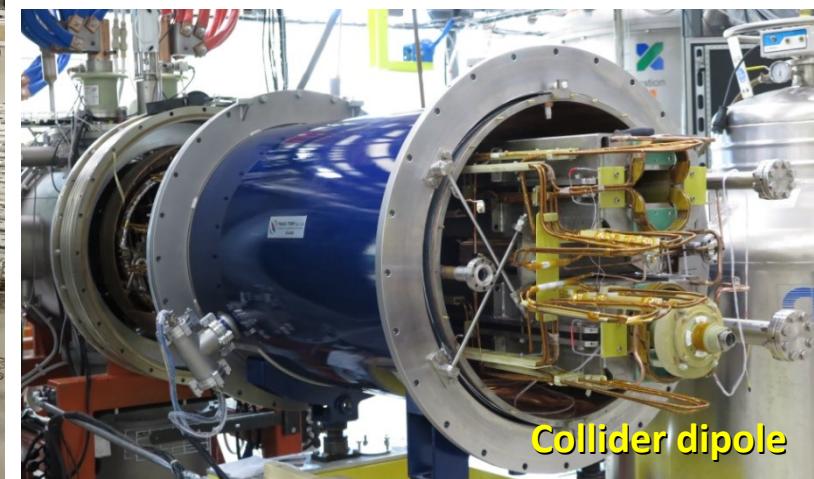

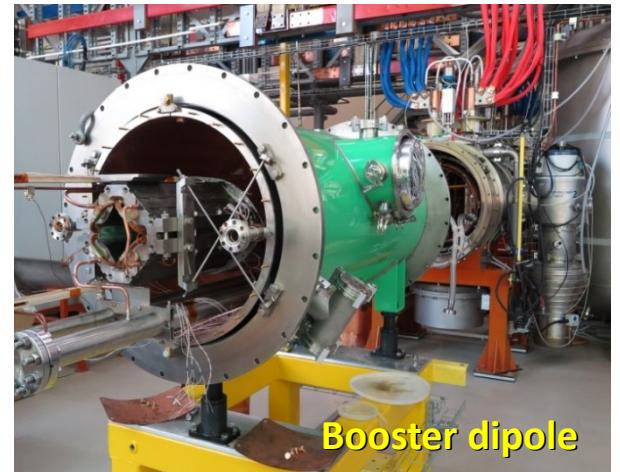

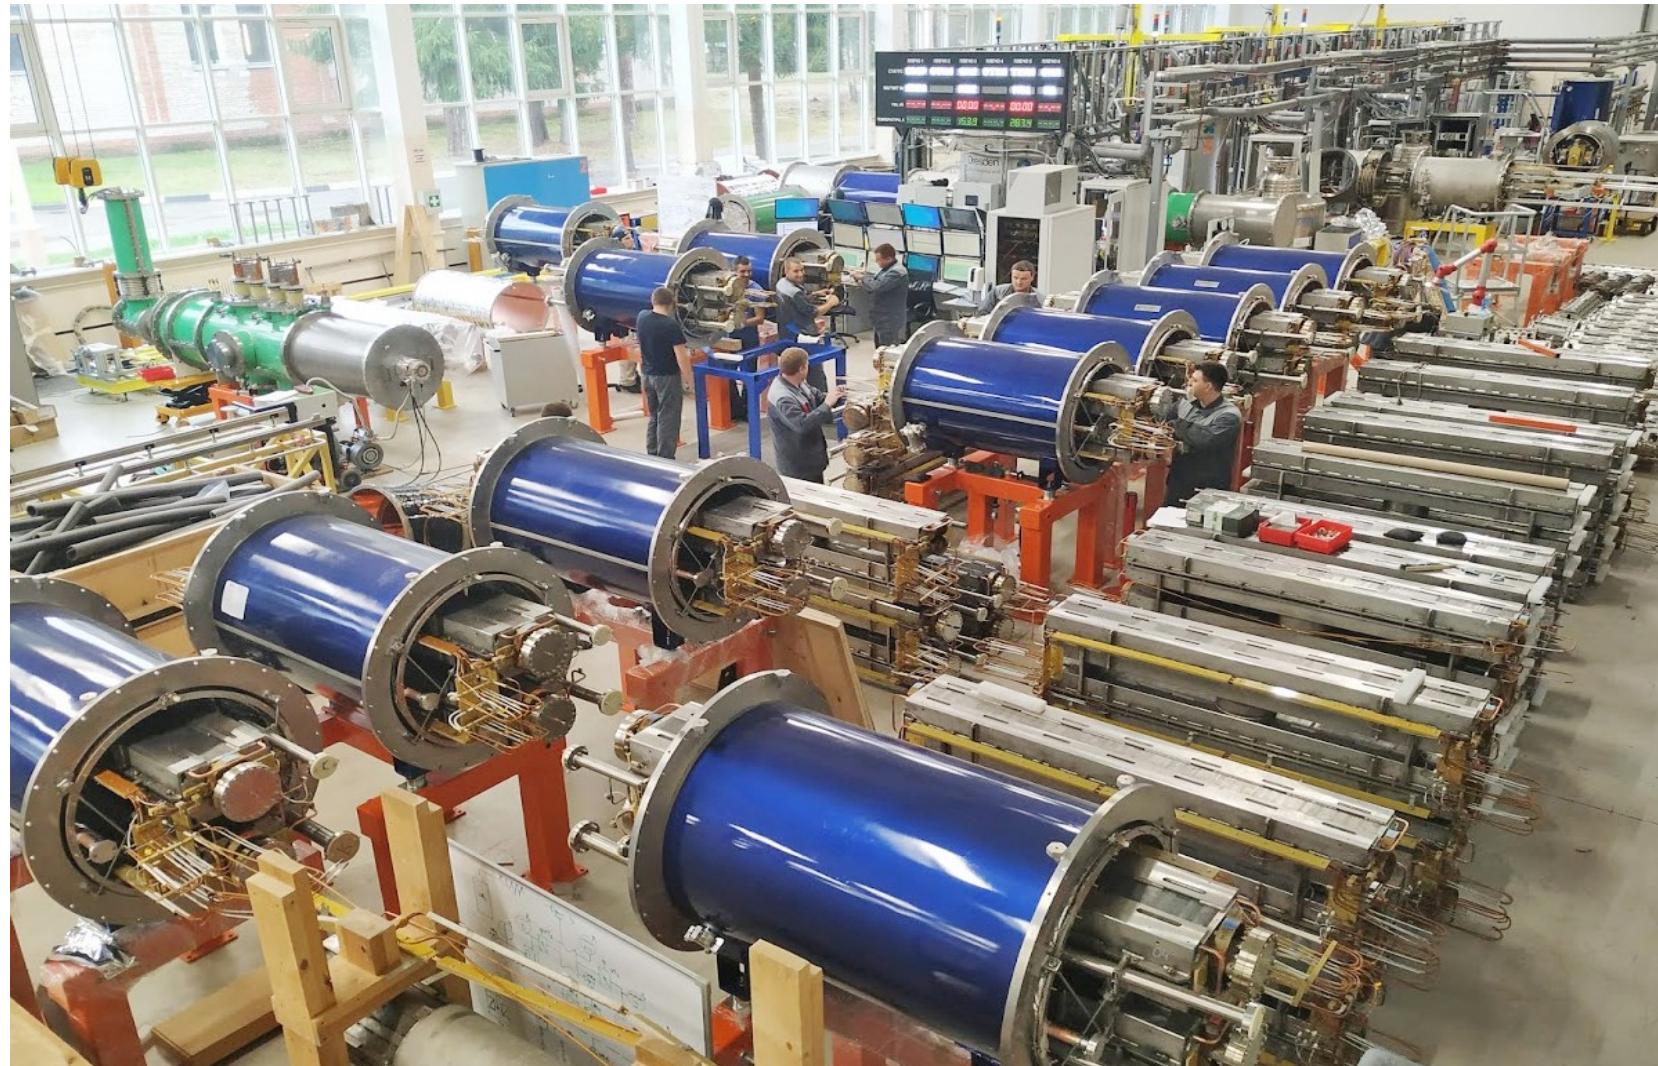

# Booster operational

- ✓ Booster fully assembled in the tunnel
- ✓ First circulating beam He<sup>+</sup> on 19 Dec 2020
- ✓ Commissioning and test ongoing for beam diagnostics, beam acceleration, electron cooling, power supply, magnets, cryogenics

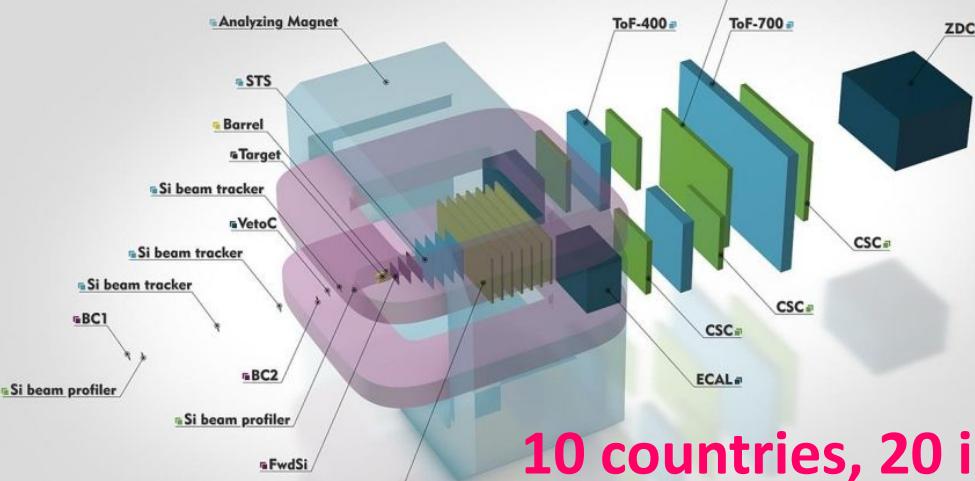

# JINR Magnet Factory

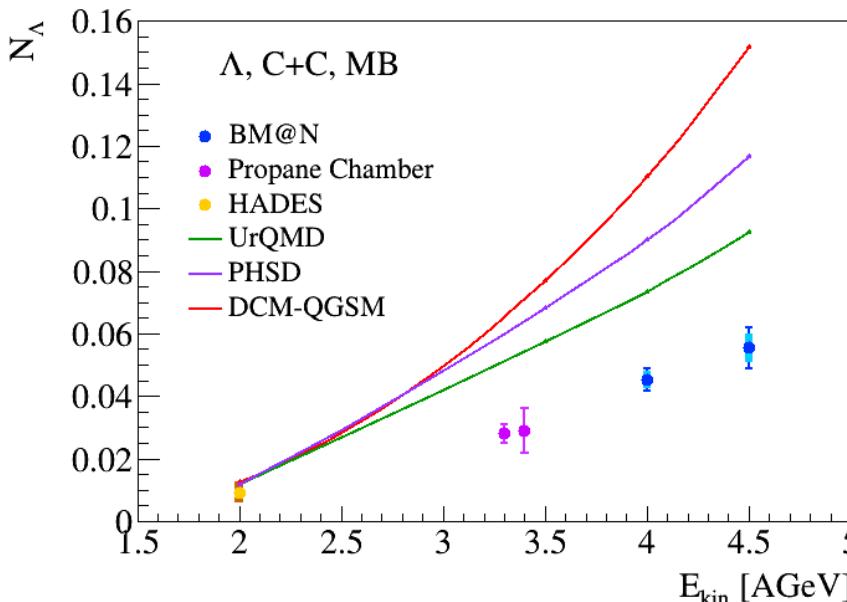

# First physics from BM@N at NICA

## Baryonic Matter @ Nuclotron (BM@N)

10 countries, 20 institutions  
(incl. WUT), 246 participants

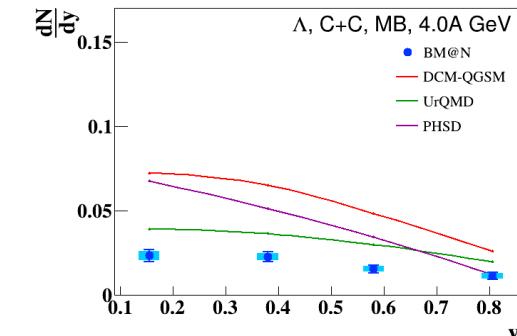

### $\Lambda$ yield in min bias C+C interactions

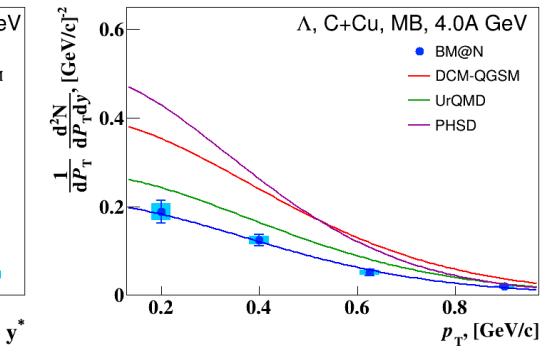

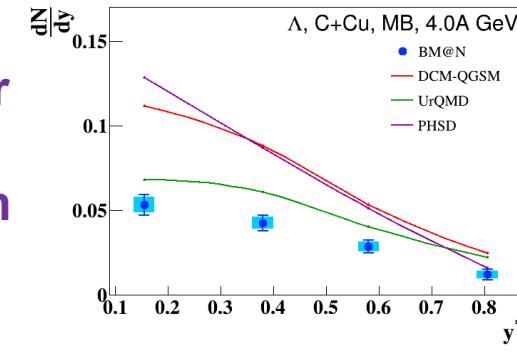

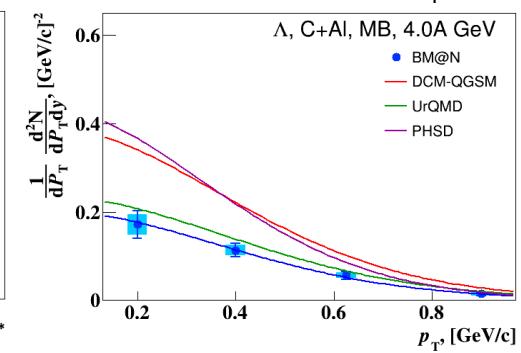

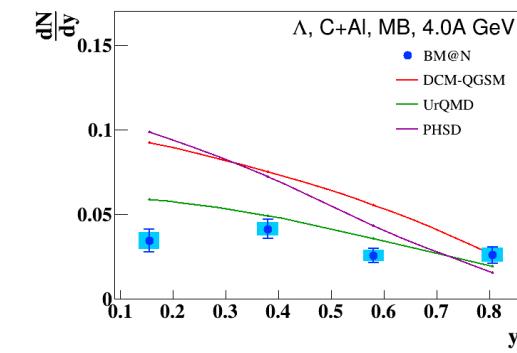

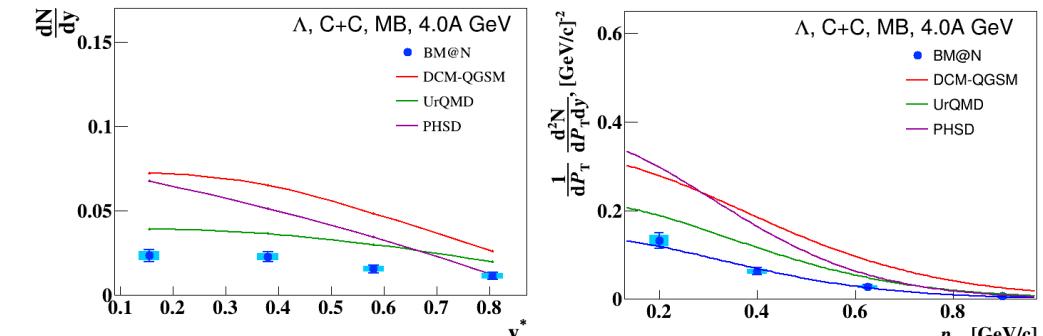

Analyses of experimental data in Ar, Kr beams and SRC data in carbon beam are in progress

## BM@N: $\Lambda$ hyperon yield in 4 AGeV Carbon-nucleus interactions

$\Lambda$  yield as a function of rapidity in c.m.s.

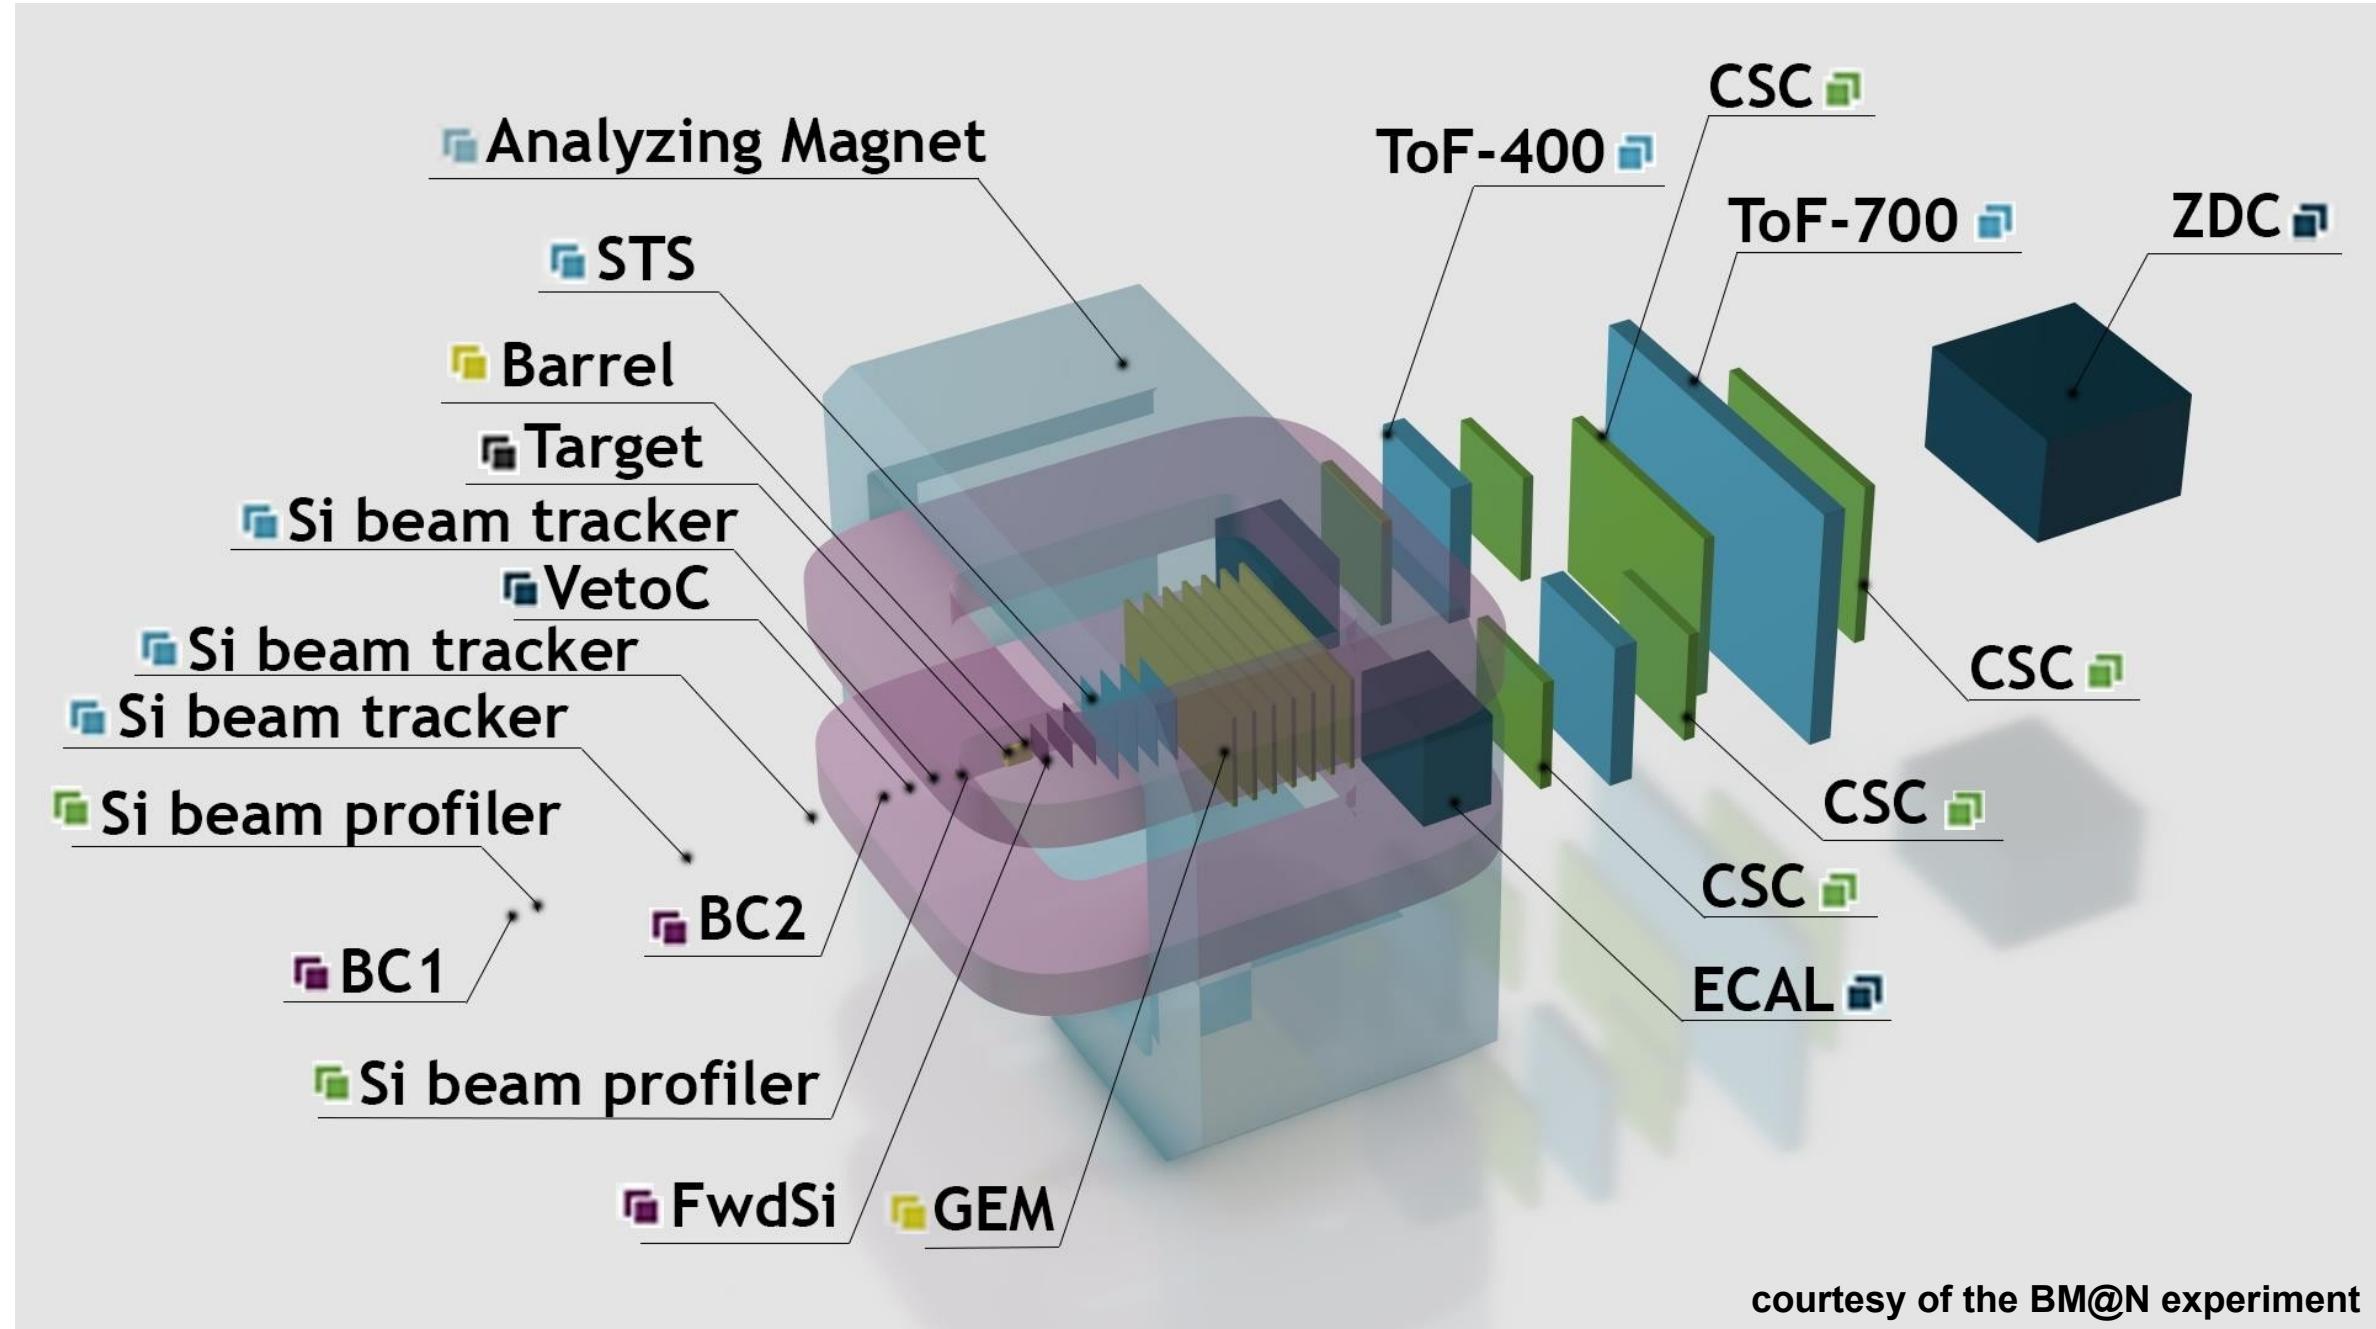

$\Lambda$  yield as a function of transverse momentum

# MPD - stage I and II

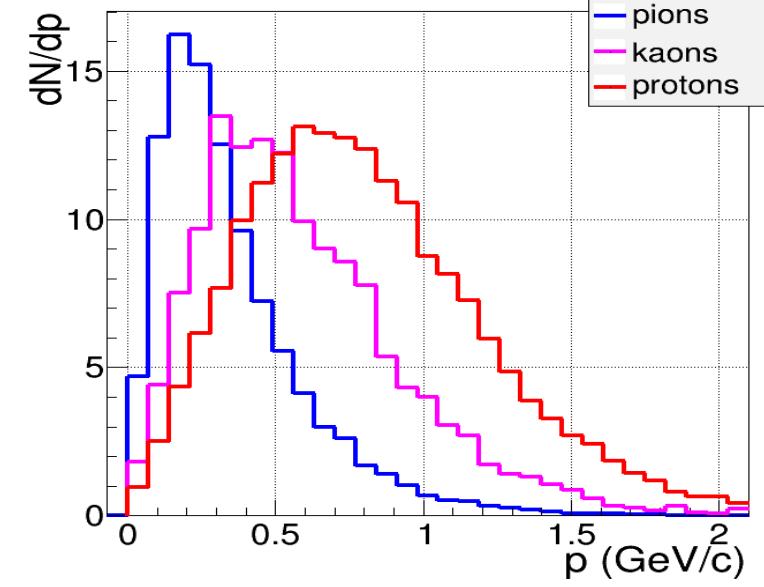

Momentum resolution with TPC

Adam Kisiel, JINR/WUT

Particle identification  
Seminarium Oddziału II IFJ, 15 Feb 2021

Momentum dist. of secondary particles

# MPD Civil Construction status

- MPD Hall ready for limited scope of equipment installation, remaining works still ongoing

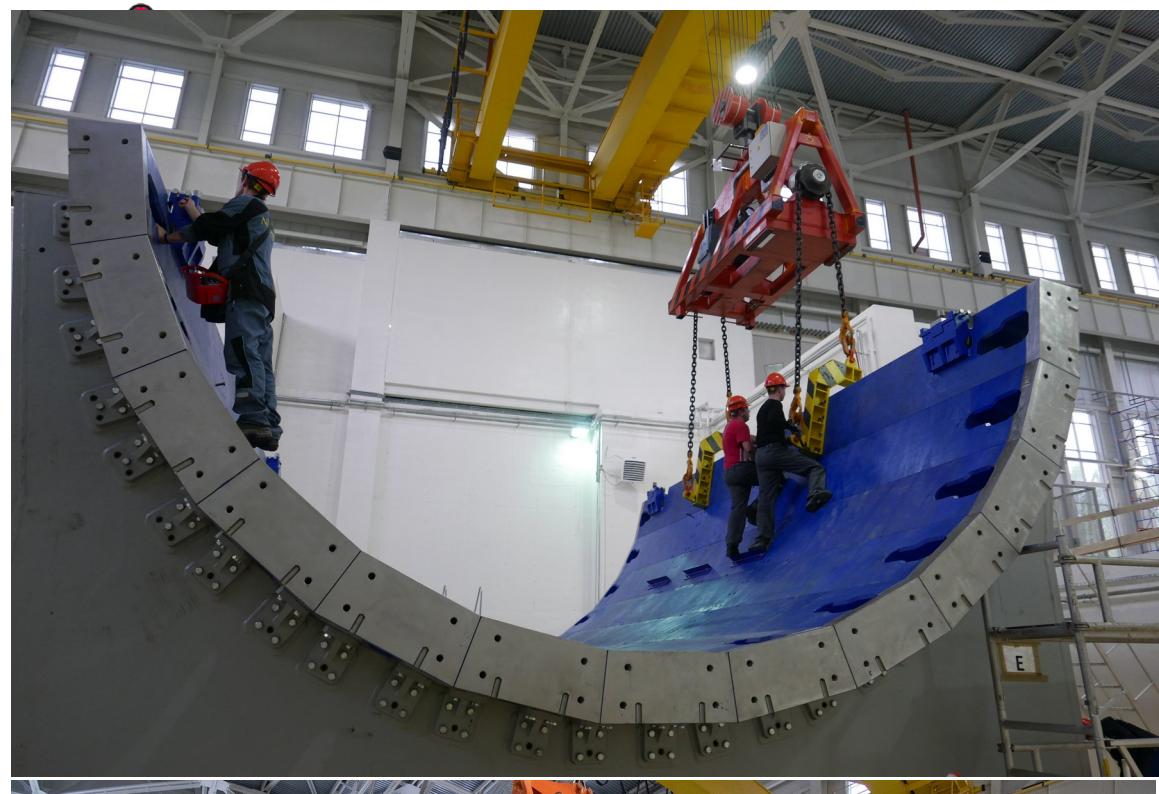

Exterior of the MPD Hall Building  
and high voltage connection housing

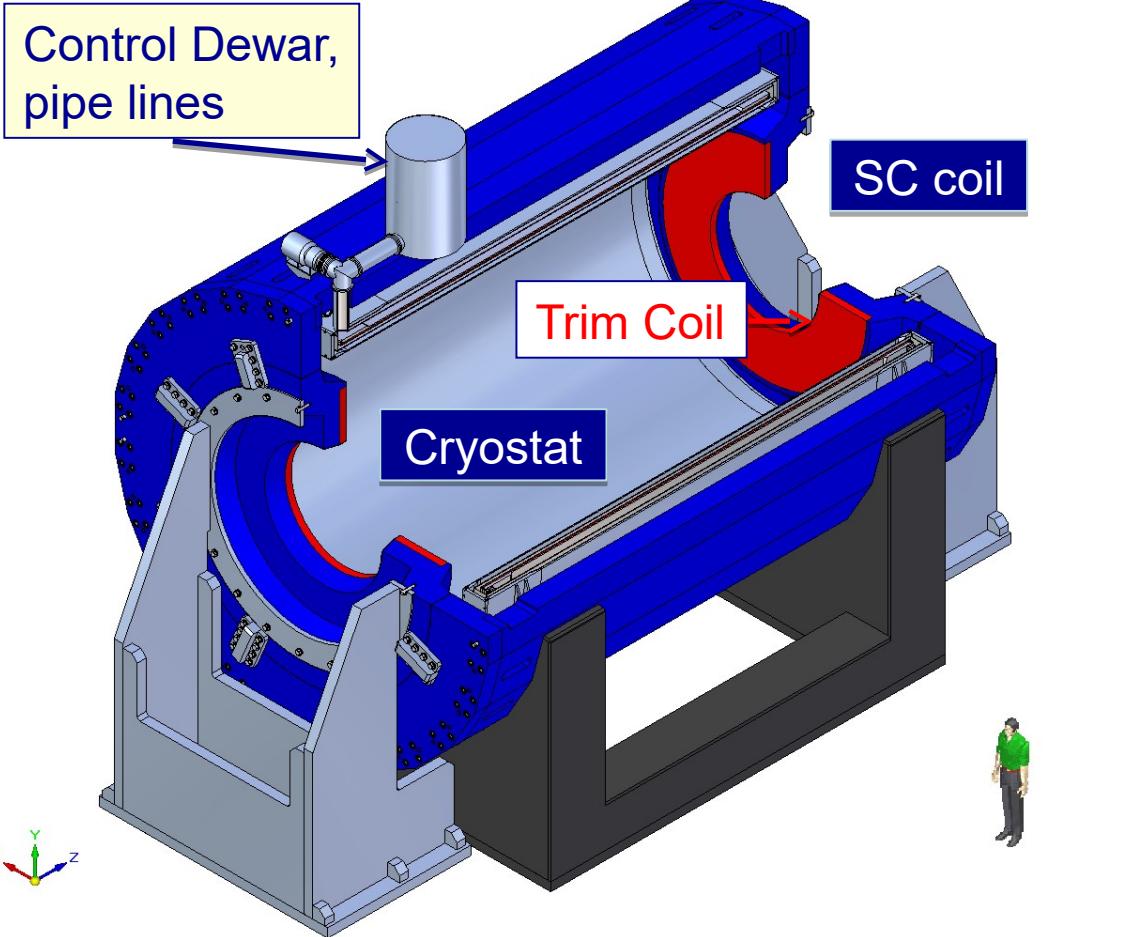

# Magnet Yoke assembly

- Assembly of the magnet yoke – start with 13 modules (out of 28) installed with average 200 µm precision, full yoke done in Dec 2021
- Next step: assembly with solenoid in presence of manufacturer team
- Critical assembly path commenced

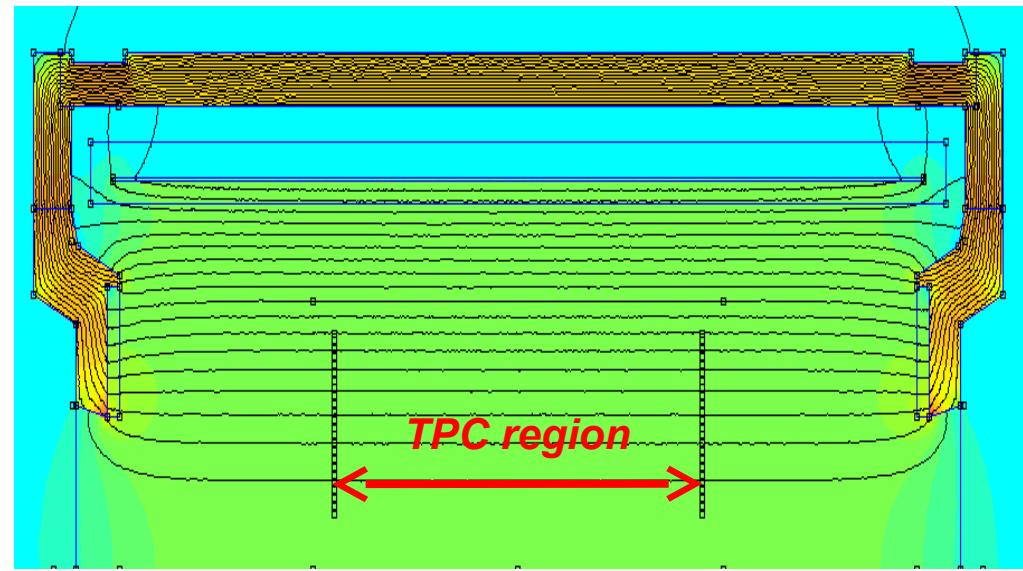

# MPD Superconducting Solenoid

$B_0 = 0.5 \text{ T}$

rated current: **1790 A**, stored energy: **14.6 MJ**

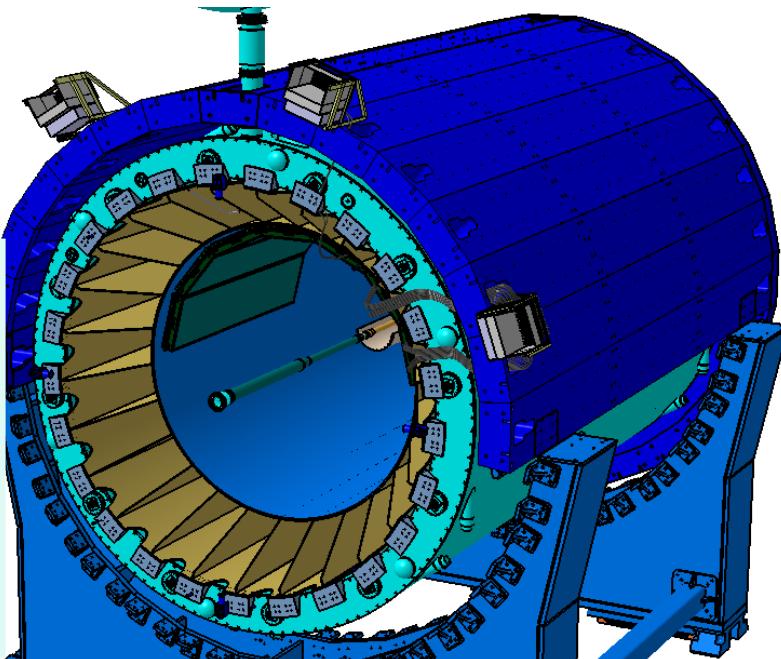

high level ( $\sim 3 \times 10^{-4}$ )  
of magnetic field  
homogeneity

HM Vitkovice,  
Czech Republic:  
fabrication of  
yoke & supports

ASG superconductors, Genova  
**general responsibility:**  
Cold Mass + Cryostat, Trim Coils  
Vacuum System, Control System

The Central Research  
Institute for Special  
Machinery, Khotkovo:  
Carbon Fiber support  
structure for all MPD  
subsystems

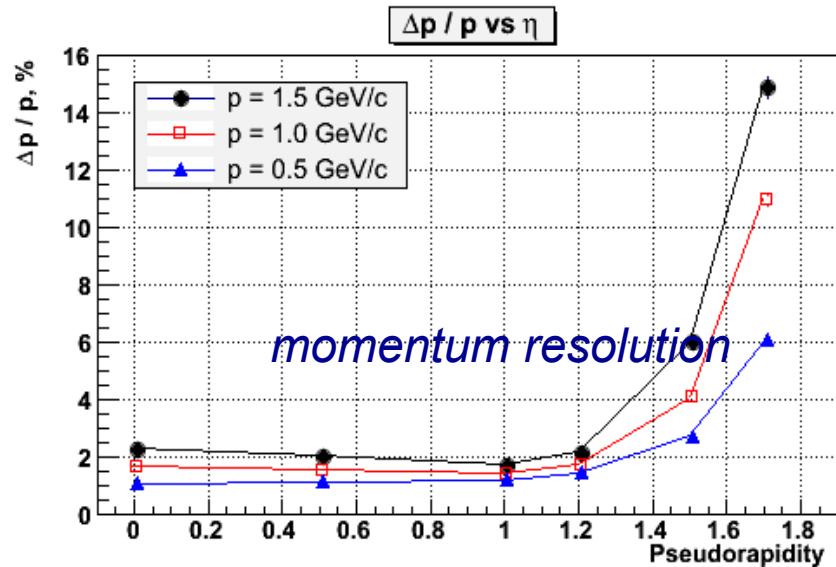

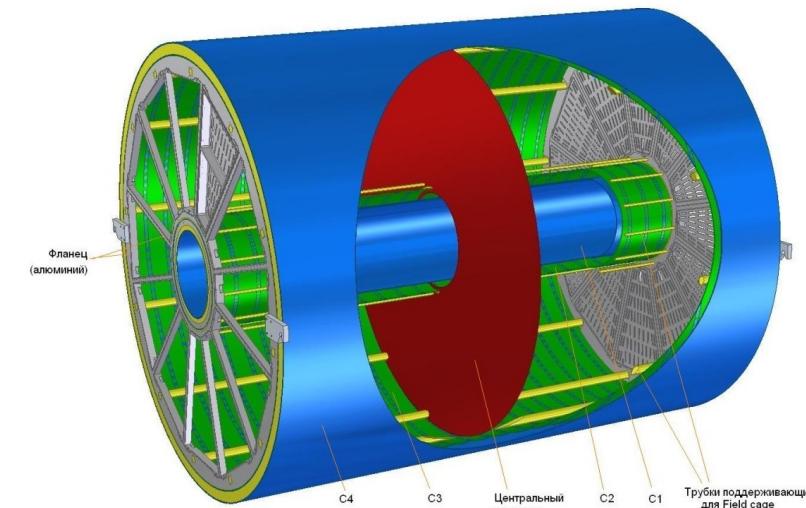

# Solenoid in MPD Hall

- On 6-th of November the MPD Solenoid delivered to MPD Hall

# NICA Time Projection Chamber (TPC): main tracker

Корпус TPC/MPD

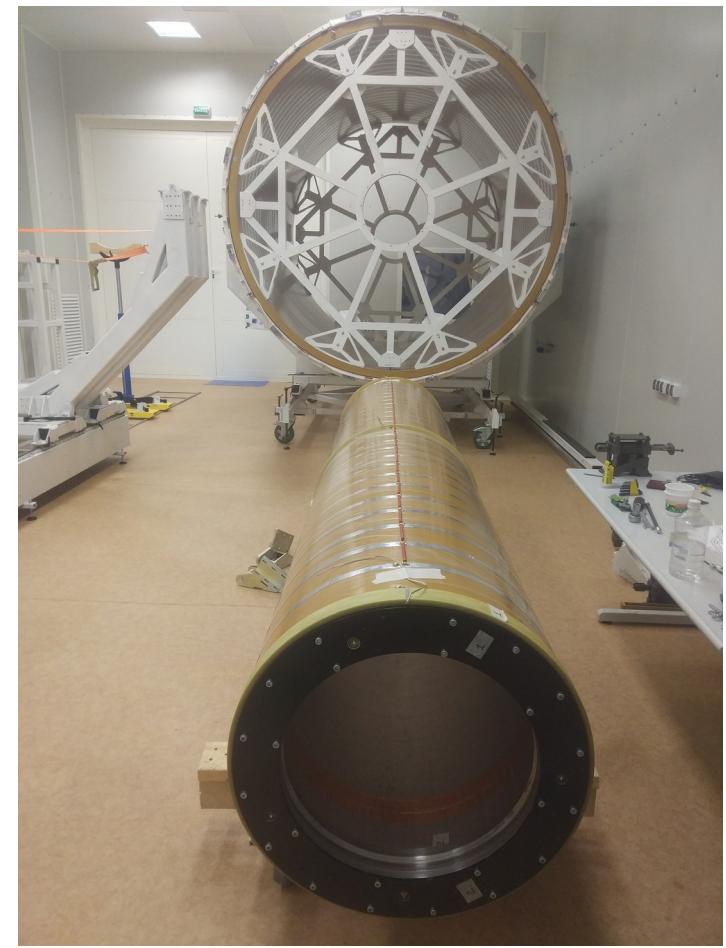

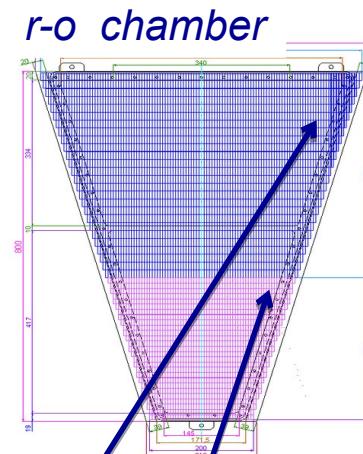

FE electronics: **FEC64SAM** –  
dual SAMPA card (**ALICE** technology)

length	340 см
outer Radii	140 см
inner Radii	27 см
gas	90%Ar+10%CH <sub>4</sub>
drift velocity	5.45 см / $\mu\text{s}$ ;
drift time	< 30 $\mu\text{s}$ ;
# R-O chamb.	12 + 12
# pads/ chan.	95 232
max rate	< 7kGz ( $L = 10^{27}$ )

### pad structure:

- rows – 53
- large pads 5×18 mm<sup>2</sup>
- small pads 5×12 mm<sup>2</sup>

21 (out of 24+2) Read-Out Chambers (ROCs)  
are ready and tested (production at JINR)

113 Electronics sets (8%) produced

Two sites (Moscow, Minsk) tested for  
electronics production

C1-C2 and C3-C4 cylinders assembled  
TPC flange under finalization

Mass production staff: 4 physicists, 4 technicians, 2 electronics engineers

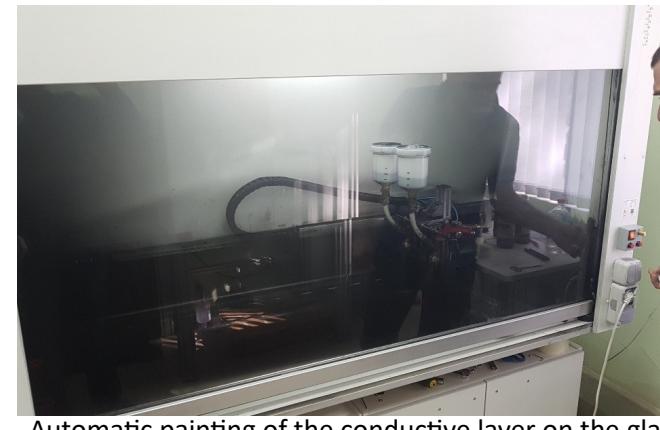

Productivity: ~ 1 detector per day (1 module/2 weeks)

# MPD Time-of-Flight

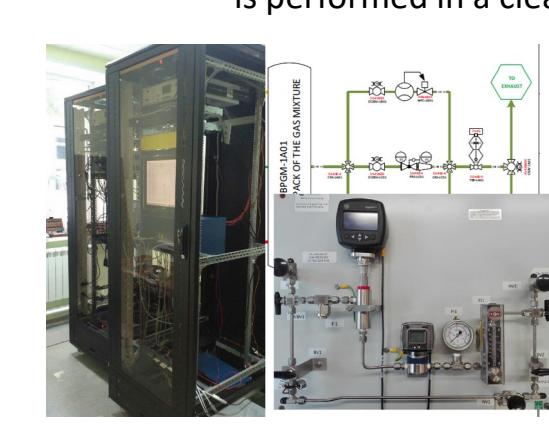

All procedure of detector assembling and optical control  
is performed in a clean rooms ISO class 6-7.

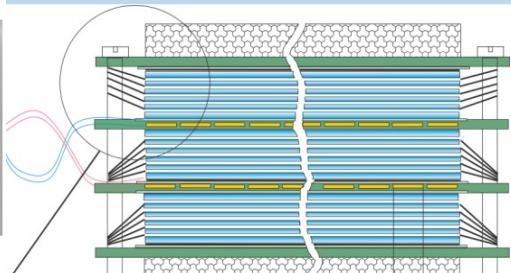

Glass cleaning with ultrasonic wave & deionized water

Automatic painting of the conductive layer on the glass

Dimensions of sensitive area  
600 x300 mm<sup>2</sup>

Single detector time resolution: 50ps

MRPC assembling

Soldering HV connector and readout pins

	Number of detectors	Number of readout strips	Sensitive area, m <sup>2</sup>	Number of FEE cards	Number of FEE channels
MRPC	1	24	0.192	2	48
Module	10	240	1.848	20	480
Barrel	280	6720	51.8	560	<b>13440</b> (1680 chips)

Purchasing of all detector materials completed  
So far 40% of all MRPCs are assembled  
Assembled half sectors of TOF are under Cosmics tests  
Investigation of solutions for detector integration and technical installations

# Electromagnetic Calorimeter (ECAL)

❖ Pb+Sc “Shashlyk”

read-out: *WLS fibers + MAPD*

$L \sim 35 \text{ cm} (\sim 14 X_0)$

❖ Segmentation ( $4 \times 4 \text{ cm}^2$ )

$\sigma(E)$  better than 5% @ 1 GeV

time resolution  $\sim 500 \text{ ps}$

**Barrel ECAL = 38400 ECAL towers (2x25 half-sectors x 6x8 modules/half-sector x 16 towers/module)**

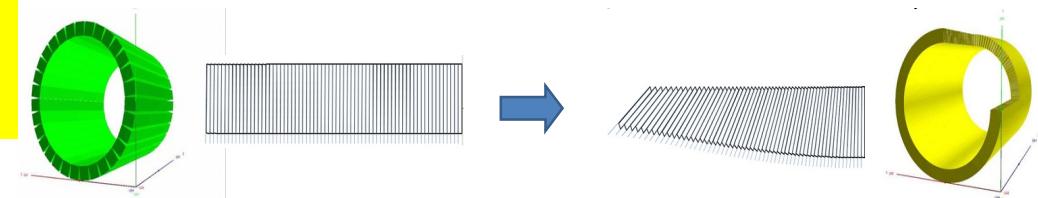

So far  $\sim 300$  modules (16 towers each) = 3 sectors are produced

Another 3 sectors are planned to be completed by May 2021

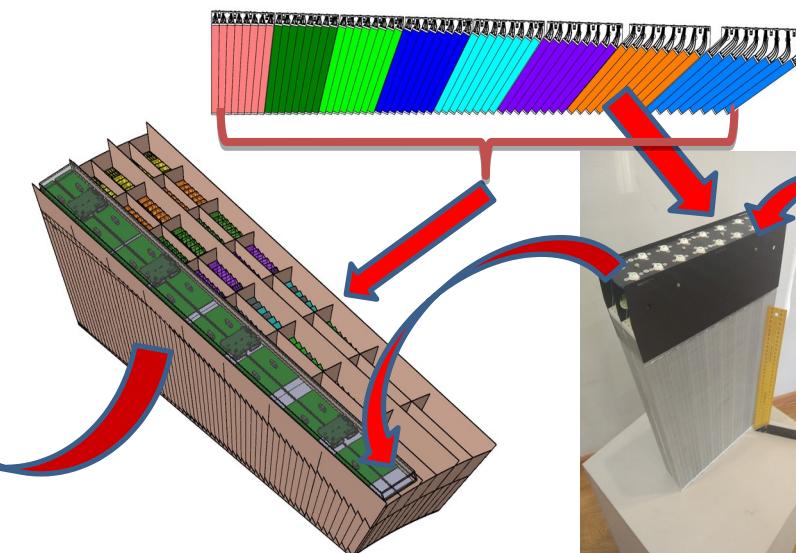

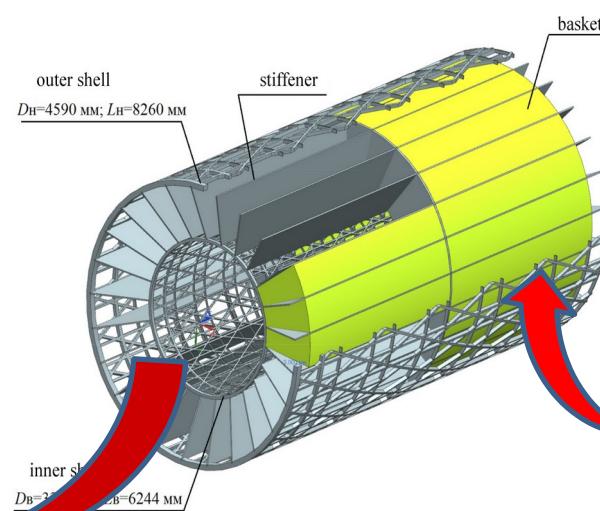

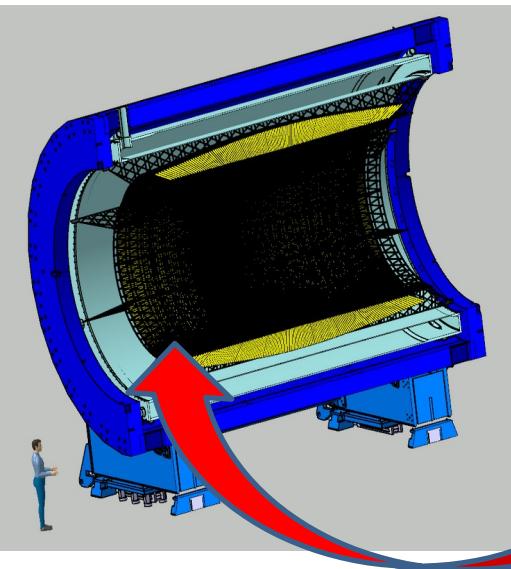

Chinese collaborators will produce 8 sectors by the end of 2021

25% of all modules are produced by JINR (production area in Protvino)

75% produced in China, currently funding is secured for approx. 25%

Projective geometry

Sectors in dedicated Containers

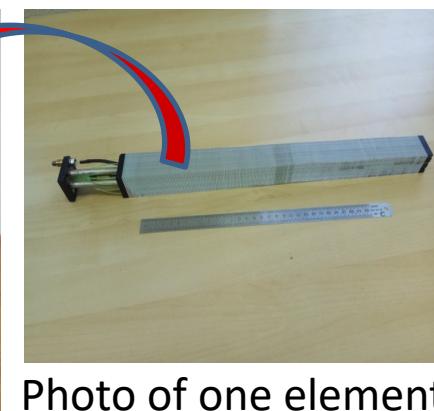

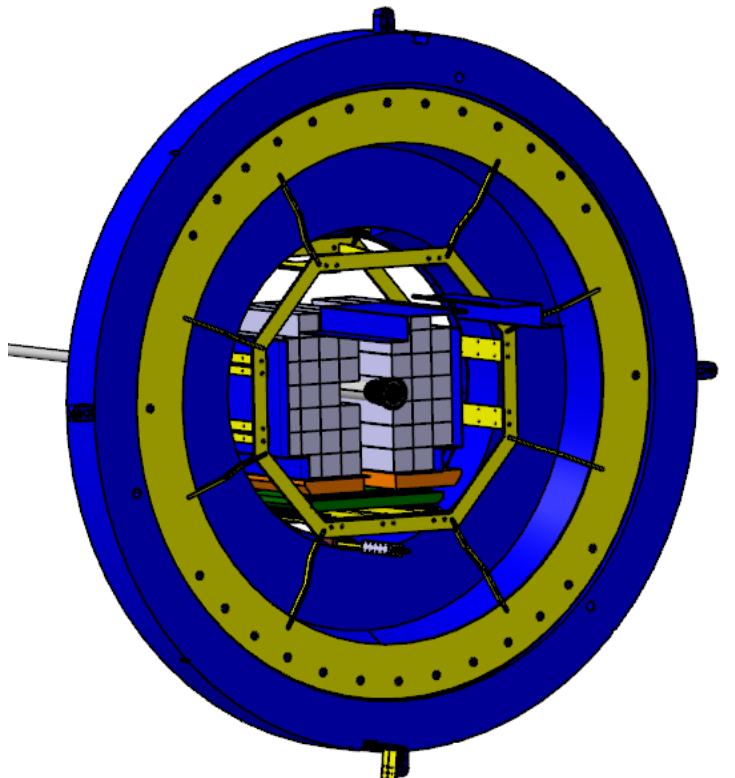

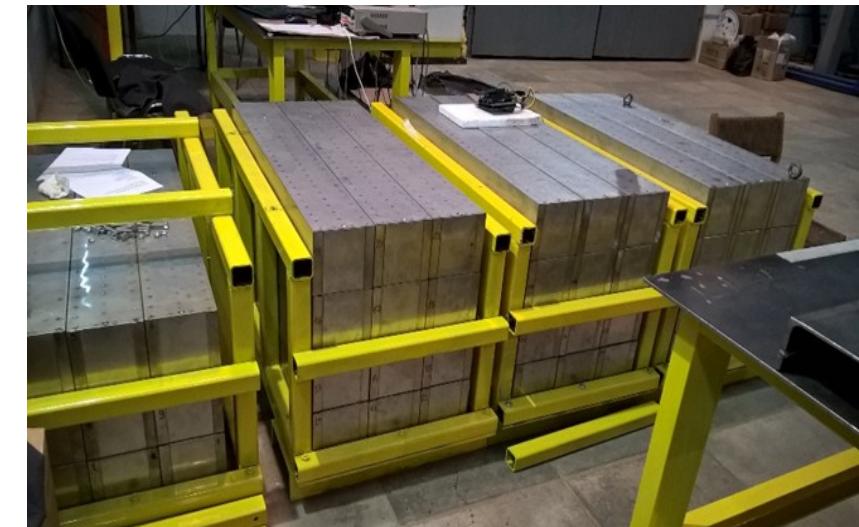

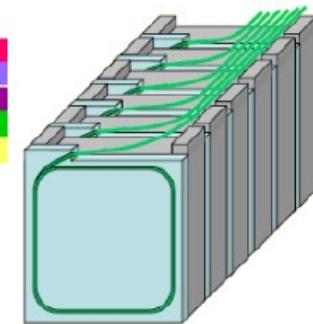

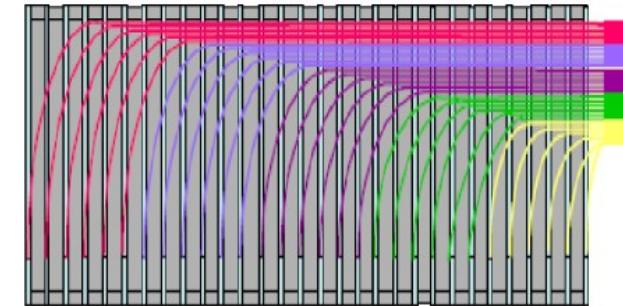

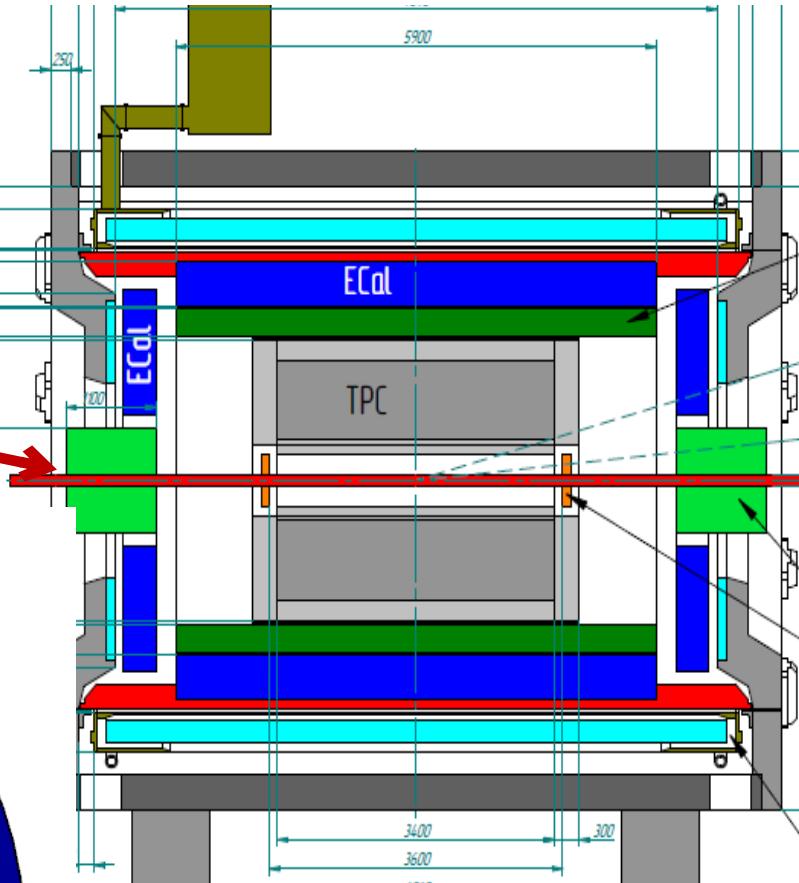

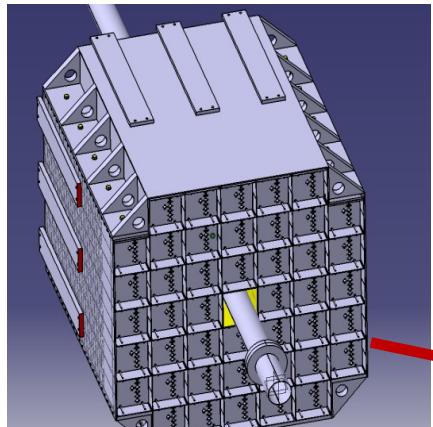

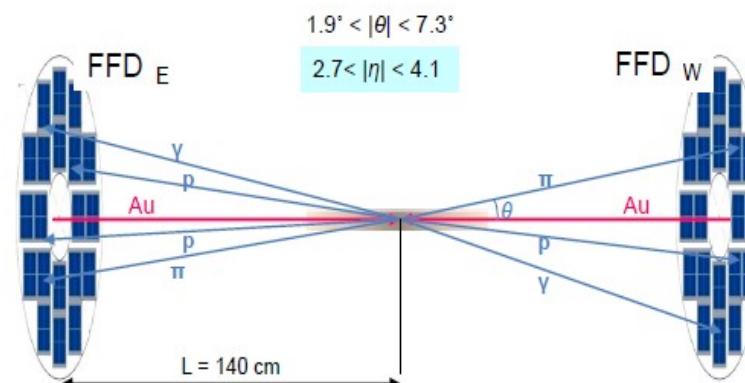

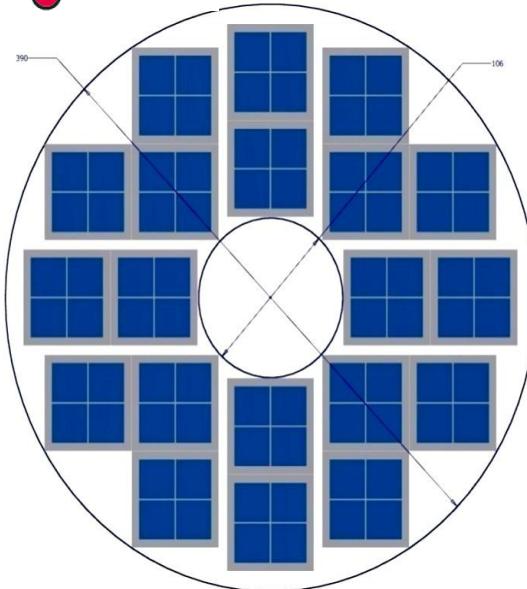

Photo of one element

# Forward Hadron Calorimeter (FHCAL)

- Two-arms at ~3.2 m from the interaction point.
- Each arm consists of 44 individual modules.
- Module size  $150 \times 150 \times 1100 \text{cm}^3$  (42 layers)
- Pb(16mm)+Scint.(4mm) sandwich
- 7 longitudinal sections
- 6 WLS-fiber/MAPD per section
- 7 MAPDs/module

# FFD - Fast Trigger L<sub>0</sub> for MPD

FFD provides information on

- interaction rate ( luminosity adjustment )
- bunch crossing region position

The FFD sub-detector consists of  
20 modules based on  
Planacon multianode MCP-PMTs  
80 independent channels

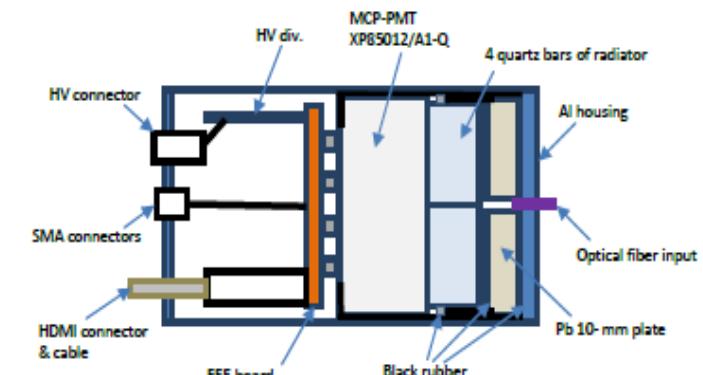

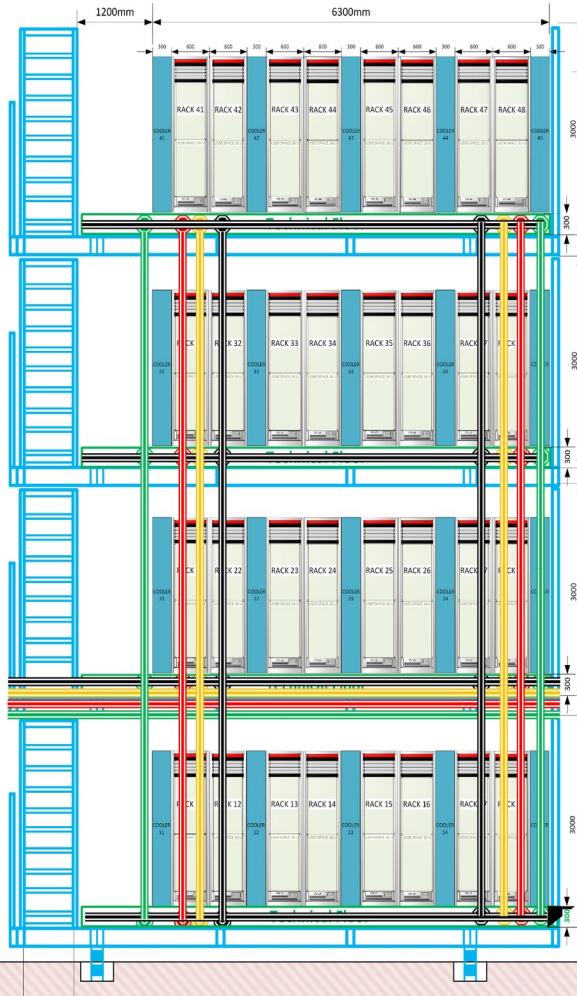

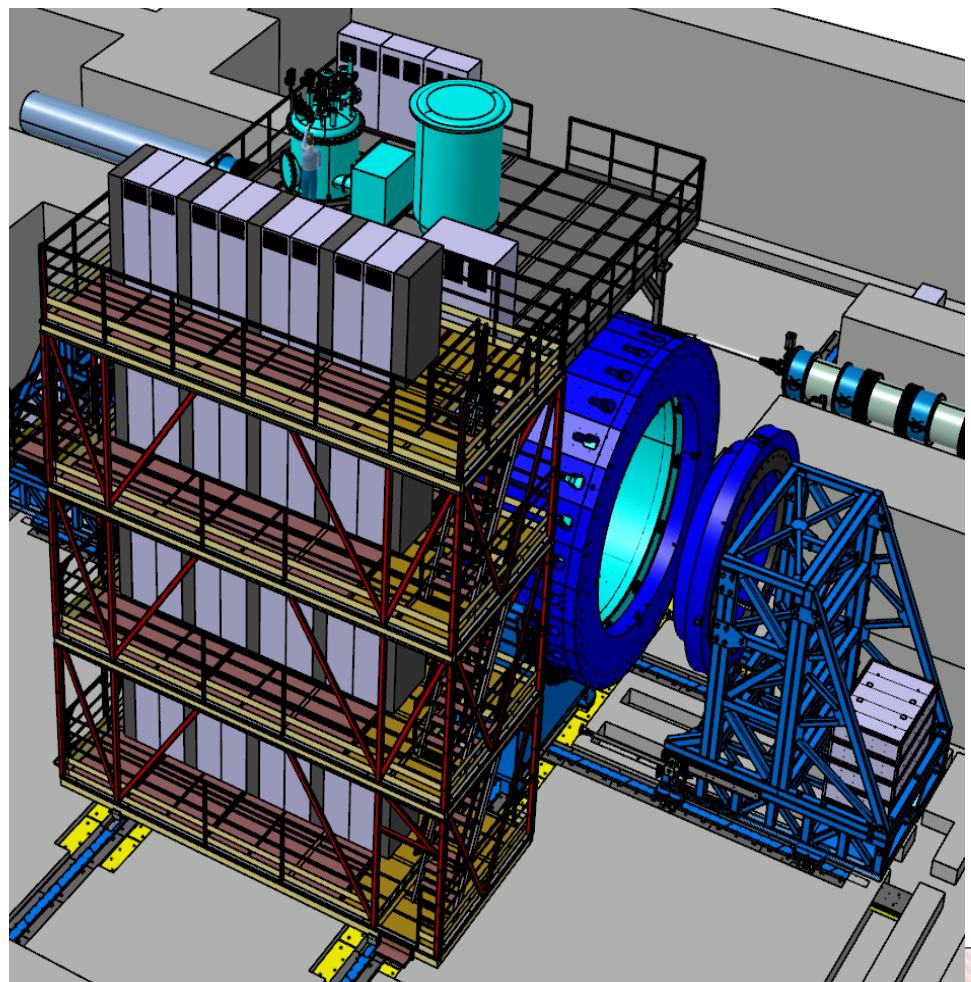

Fig. 4-1. A scheme of the FFD module.

**15 mm quartz radiator**  
**10 mm Lead converter**

MPD trigger group is created on the basis of FFD team  
Beside FFD we consider the signals from FHCAL to be implemented into trigger L0  
The FHCAL team have produced trigger electronics.  
Monte Carlo studies will be used to optimize the properties of the L0 trigger

# MPD Electronics Platform

- Electronics platform has 4 levels with 8 racks on each level
- Each Rack provides cooling, fire safety and radiation control system
- Cable ducts connect detectors inside of MPD and Electronics Platform
- The mechanical part of the Platform is ready

The design of the MPD Electronics Platform is a major contribution of the Polish groups to MPD  
M. Peryt (WUT) – leader of the „Engineering Support” Sector of VBLHEP

# MPD Cosmic Ray Detector (MCORD)

NCBJ, Świerk - WUT, Warsaw (Poland) 18 scientists+12 engineers

Project leader: M. Bielewicz (NCBJ)

As soon as possible - start tests of MPD subsystems before Collider operation

Cosmic Ray Detector required for Commissioning and tests of the MPD.

The signals from MCORD will be used for TPC and TOF tests after their installation.

We'll need the elements of MCORD (scintillation panels with readout electronics) in March 2021

## CDR for MCORD under evaluation of the MPD DAC

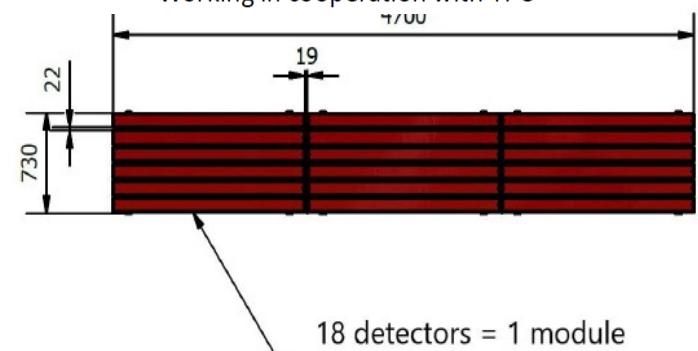

Cosmic Ray Detector consists of plastic scintillators with SiPM (Phototubes) light converters

- a) Trigger (for testing or calibration)
  - testing before completion of MPD (testing of TOF, ECAL modules and TPC)
  - calibration before experimental session
- b) Veto (normal mode - track and time window recognition)  
Mainly for TPC and eCAL

Additionally

- c) Astrophysics (muon shower and bundles)
  - unique for horizontal events

Working in cooperation with TPC

## 5. MCORD Detector

### SCINTILLATORS

Number of scintillators:	660 pcs
Dimensions of scintillators:	95x25x1500 [mm]
Dimensions of detector:	100x30x1554 [mm]
Scintillators are placed in the rectangle profile	10x30x2.5 [mm]
Weight of detector:	6.5 kg
Material of scintillators casing:	Aluminum alloy

### MODULES

Number of detector in one module:	18
Number of Modules:	28
Dimensions of module:	730x90x4700 [mm]
Weight of one module:	150 kg

### SiPM/MMPC

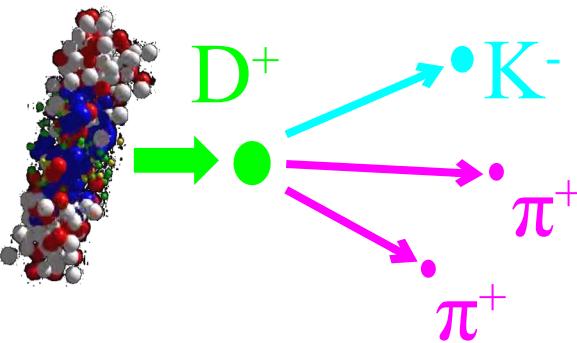

Number of SiPMs (Channels)	1320
Number of SiPMs (with two fibers)	2640

### RESOLUTION

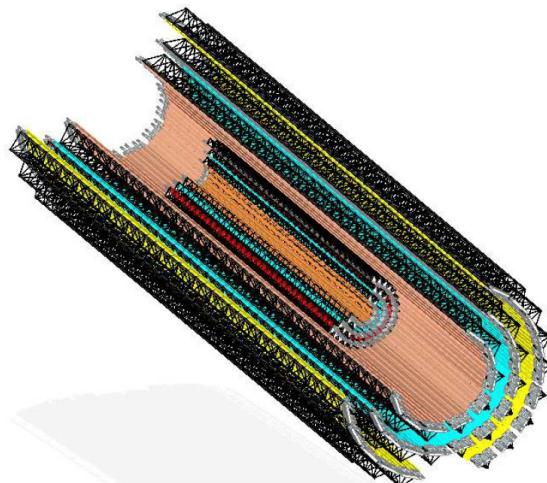

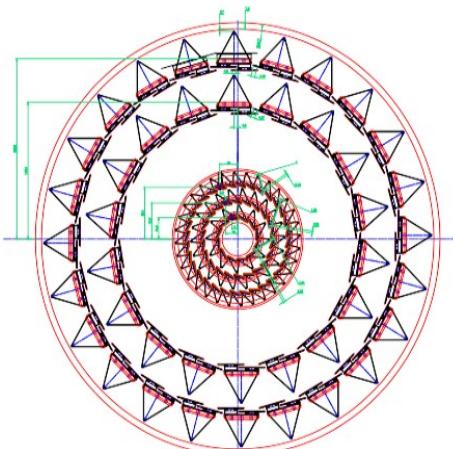

Position resolution: In X axis – up to 5 cm, In Y axis – 5-10 cm	
Time Resolution – about 300-500 ps	
Number of events (particles):	about 100-150 per sec per m <sup>2</sup>
Calculated Coincidence factor:	about 98%

# Inner Tracker System (ITS): precise tracking

Consortium includes JINR, NICA (BM@N & MPD) , FAIR, Russian, Polish and Ukrainian Institutes + CCNU Central China Normal Univ., IMP- Institute of Modern Physics, USTC – Hefei

Protocol # 134 between CERN and JINR states the legal terms for transaction of CERN developed novel technology and the know-how for building the MPD-ITS on the basis of Monolithic Active Pixel Sensors (*the MAPS*) ALPIDE, signed in 2018. This document laid a clear road towards the MPD ITS.

MPD ITS based on ALICE type staves

# Milestones of MPD assembling in 2020-2022

## Year 2020

1. July 15<sup>th</sup> - MPD Hall and pit are ready to store and unpack Yoke parts
2. August - The first 13 plates of Magnet Yoke are assembled for alignment checks
3. Sept 15<sup>th</sup> - Oct 1<sup>st</sup> - Solenoid is ready for transportation from ASG (Italy)
4. November 6<sup>th</sup> - Solenoid arrived in Dubna
5. Nov-Dec - Assembling of Magnet Yoke at JINR

## Year 2021

6. Jan- Sep - Preparation for switching on the Solenoid (Cryogenics, Power Supply et cet.)
7. Oct - Nov - Magnetic Field measurement
8. Dec - Installation of Support Frame

## Year 2022

9. Jan- Jun - Installation of TOF, TPC, Electronics Platform, Cabling
10. Jul - Installation of beam pipe, FHCAL, Cosmic Ray test system
11. Jul-Dec - Cosmic Ray tests
12. December - Commissioning

## • Year 2023

13. March - Run on the beam

# MPD Physics Programme

G. Feofilov, A. Ivashkin

## Global observables

- Total event multiplicity
- Total event energy
- Centrality determination
- Total cross-section measurement
- Event plane measurement at all rapidities
- Spectator measurement

V. Kolesnikov, Xianglei Zhu

## Spectra of light flavor and hypernuclei

- Light flavor spectra
- Hyperons and hypernuclei
- Total particle yields and yield ratios
- Kinematic and chemical properties of the event
- Mapping QCD Phase Diag.

K. Mikhailov, A. Taranenko

## Correlations and Fluctuations

- Collective flow for hadrons
- Vorticity,  $\Lambda$  polarization
- E-by-E fluctuation of multiplicity, momentum and conserved quantities
- Femtoscopy
- Forward-Backward corr.
- Jet-like correlations

V. Riabov, Chi Yang

## Electromagnetic probes

- Electromagnetic calorimeter meas.
- Photons in ECAL and central barrel
- Low mass dilepton spectra in-medium modification of resonances and intermediate mass region

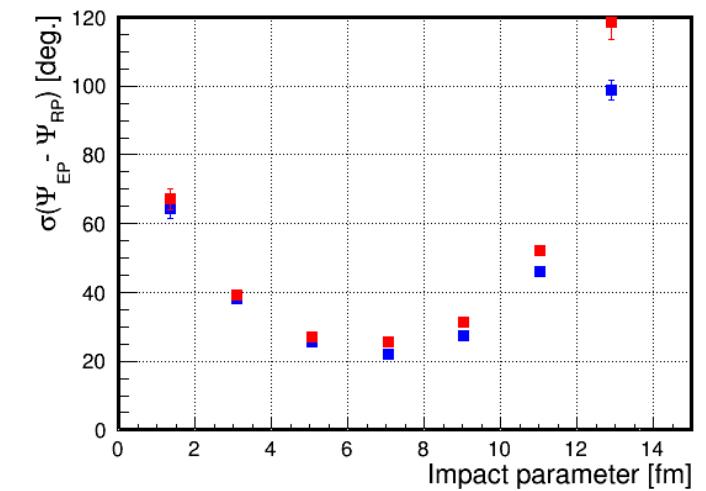

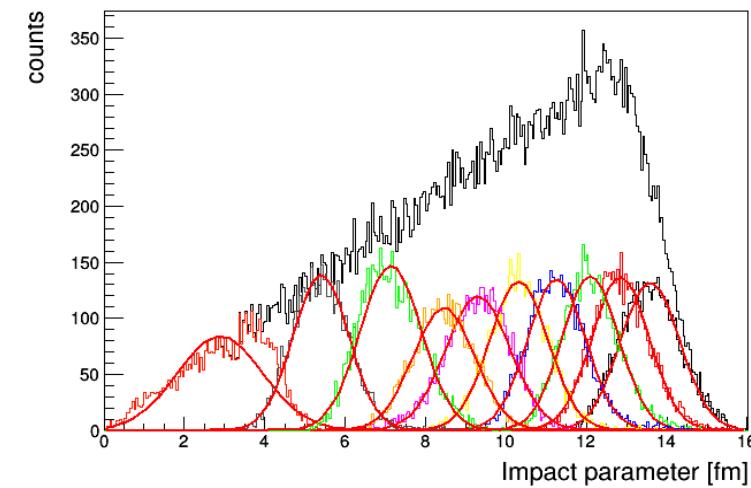

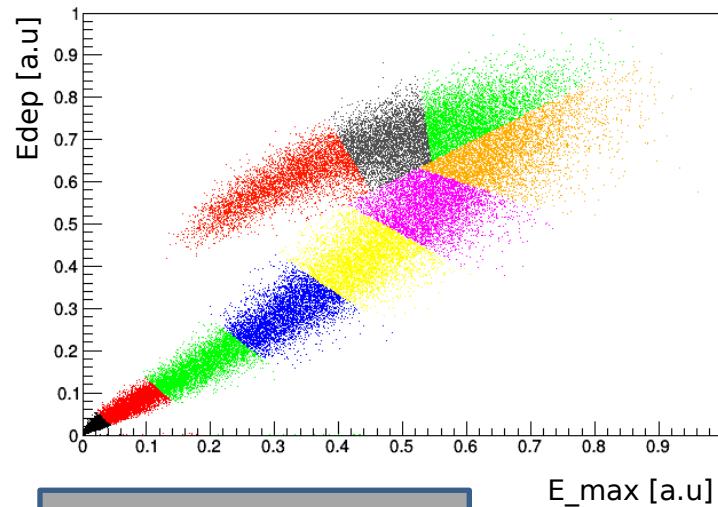

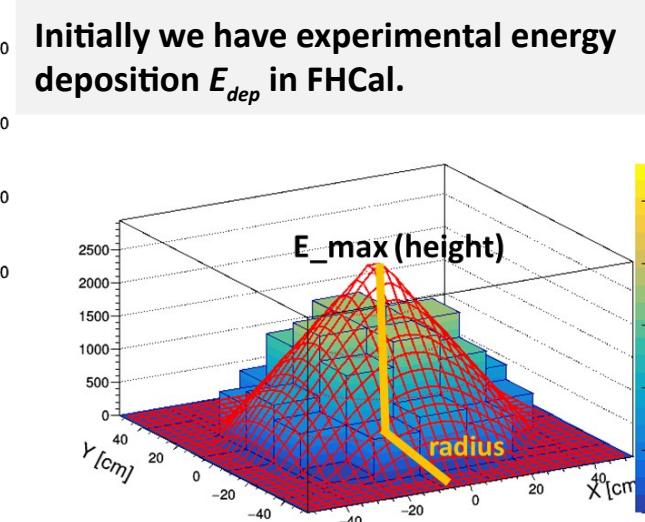

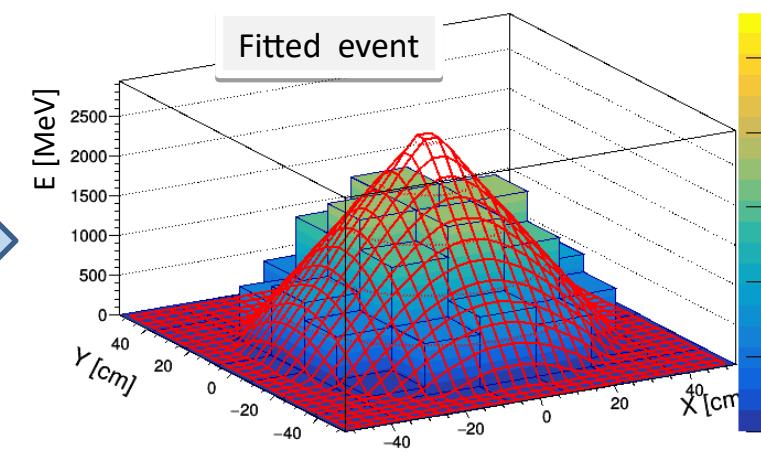

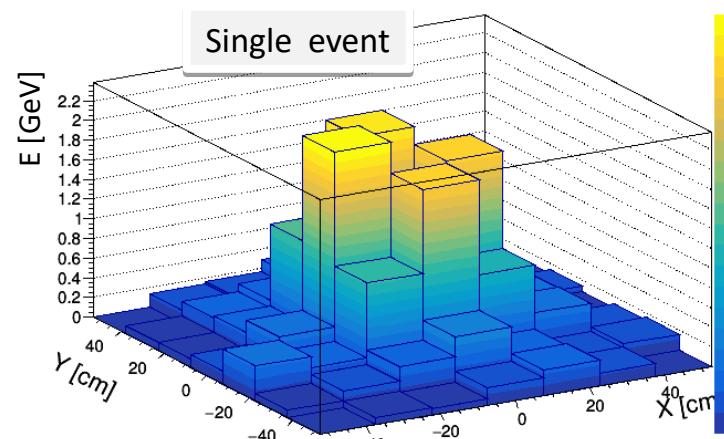

Wangmei Zha, A. Zinchenko

## Heavy flavor

- Study of open charm production
- Charmonium with ECAL and central barrel
- Charmed meson through secondary vertices in ITS and HF electrons
- Explore production at charm threshold

# Centrality and reaction plane in FHCAL

Energy distribution in FHCAL modules

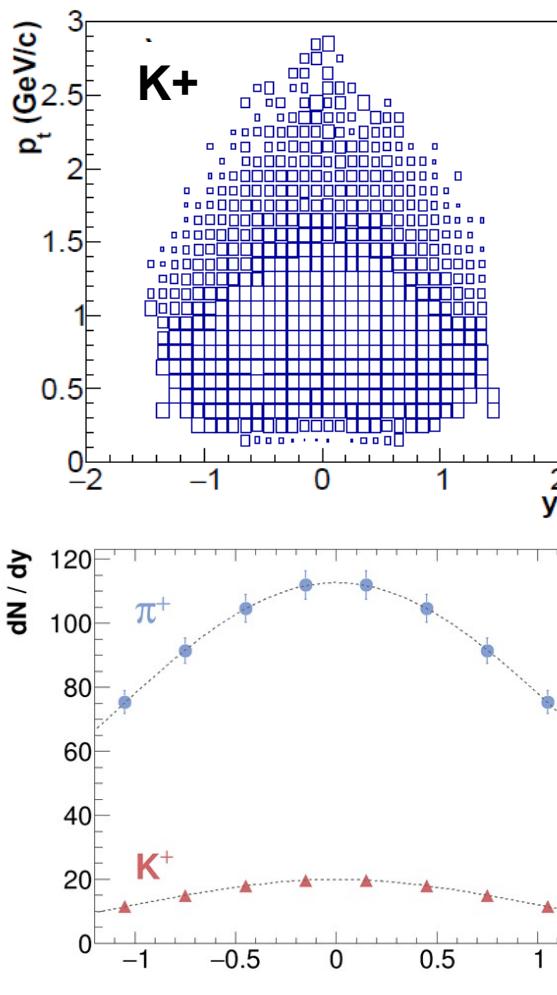

Each color bin is 10% fractions of the total number of events.

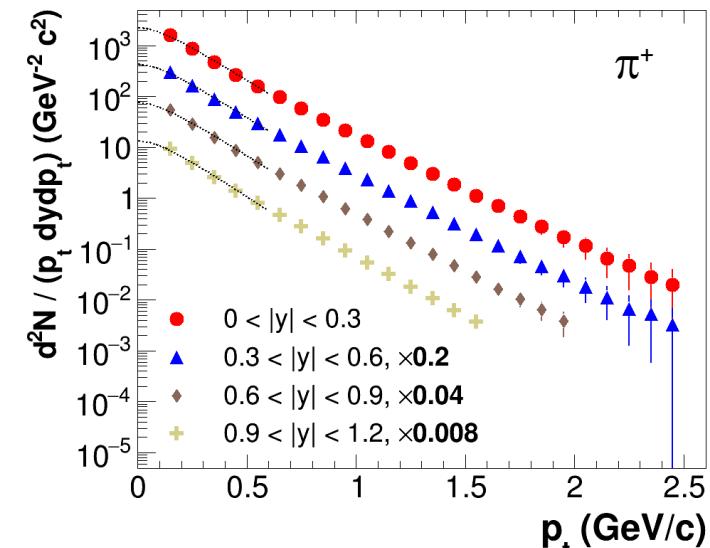

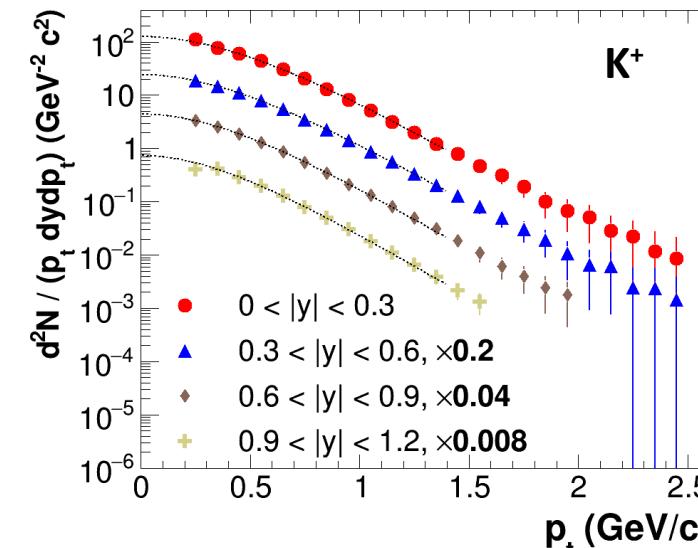

Centrality resolution

# Hadroproduction with MPD

- Particle spectra, yields & ratios are sensitive to bulk fireball properties and phase transformations in the medium
- Uniform acceptance and large phase coverage are crucial for precise mapping of the QCD phase diagram
- ✓ 0-5% central Au+Au at 9 GeV from the PHSD event generator, which implements partonic phase and CSR effects
- ✓ Recent reconstruction chain, combined  $dE/dx$ +TOF particle ID, spectra analysis

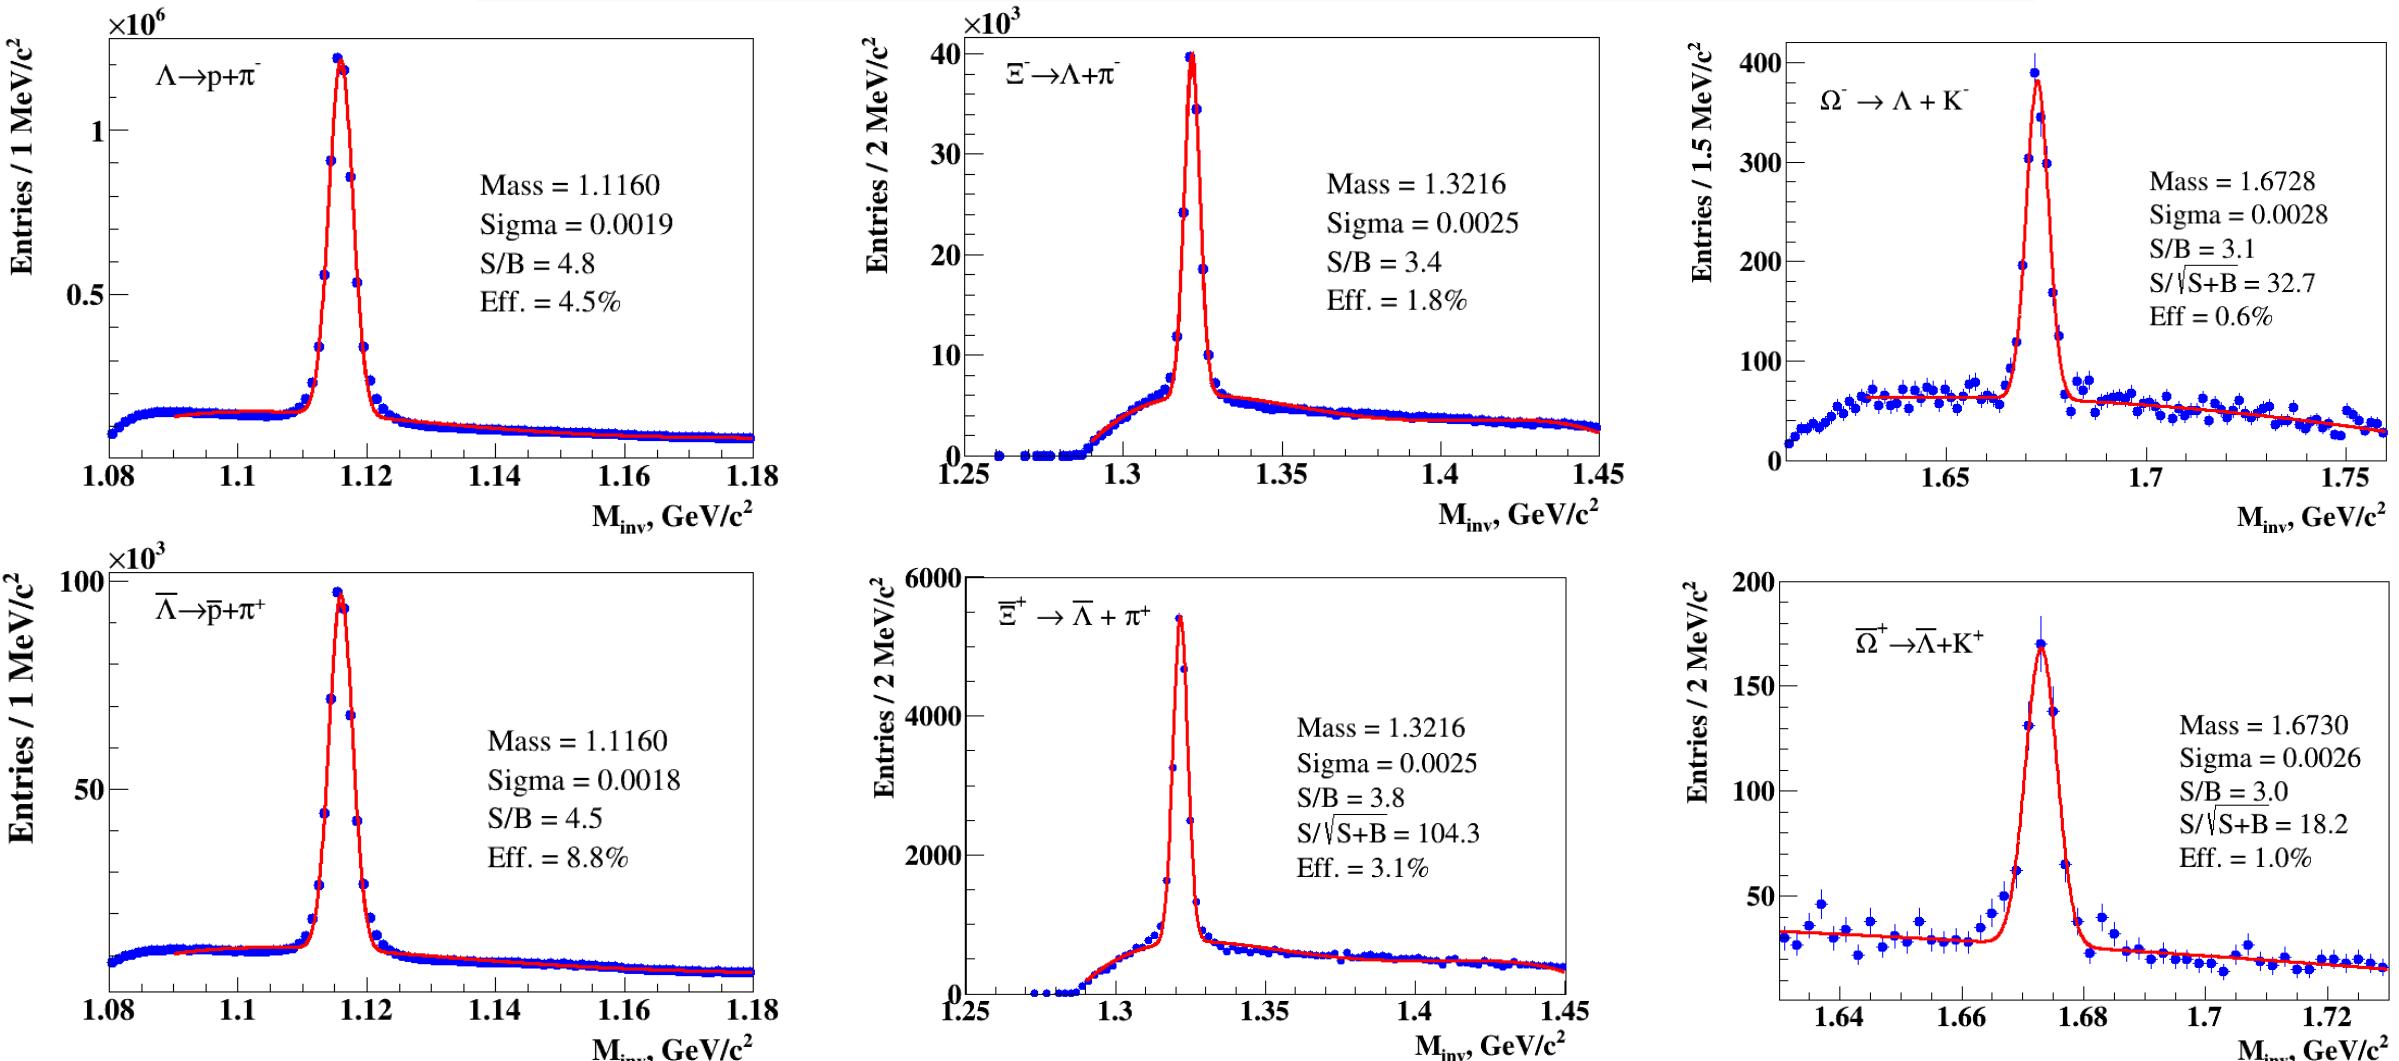

- MPD provides large phase-space coverage for identified pions and kaons (> 70% of the full phasespace at 9 GeV)
- Hadron spectra can be measured from  $p_t = 0.2$  to  $2.5 \text{ GeV}/c$
- Extrapolation to full  $p_t$ -range and to the full phase space can be performed exploiting the spectra shapes (see BW fits for  $p_t$ -spectra and Gaussian for rapidity distributions)

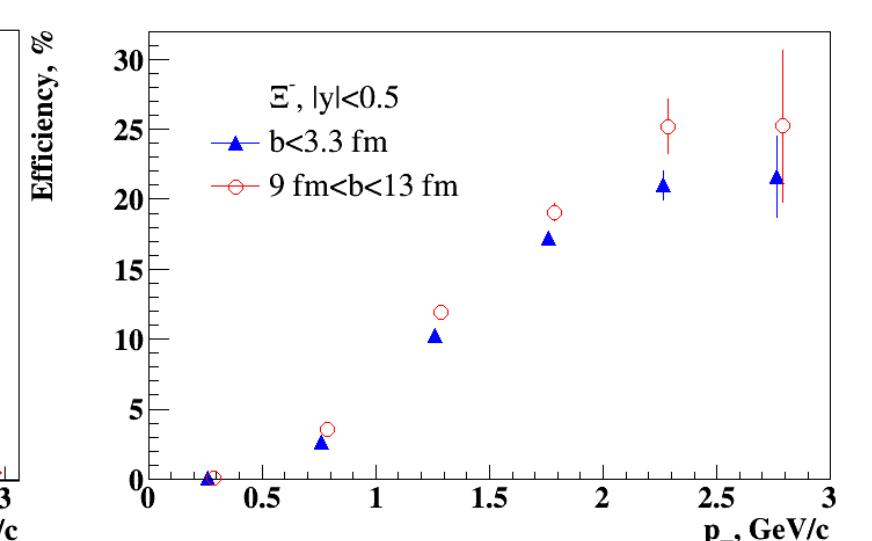

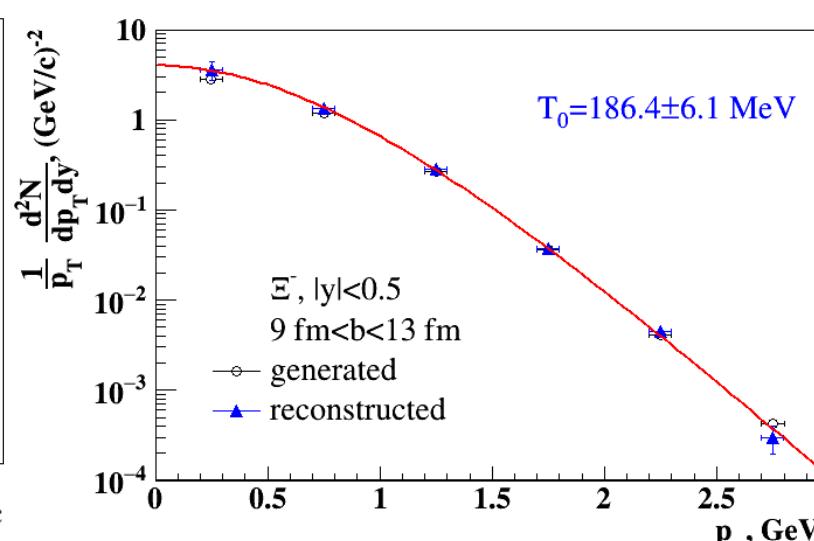

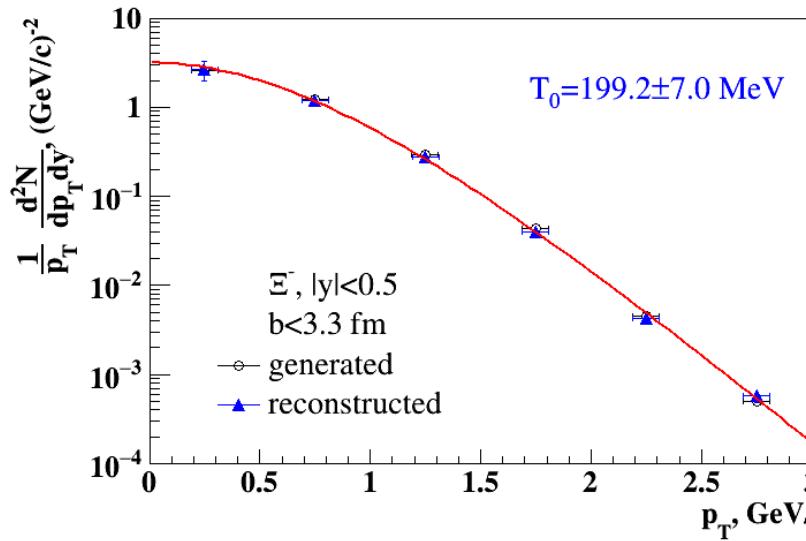

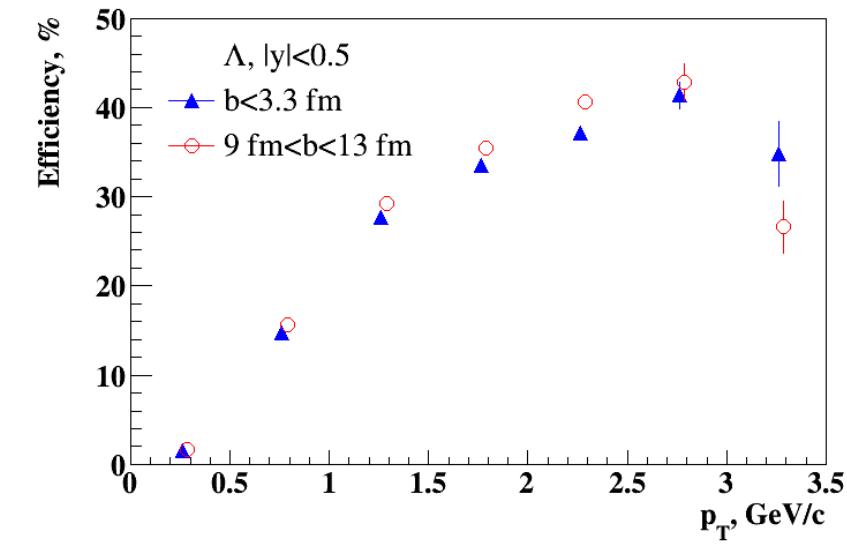

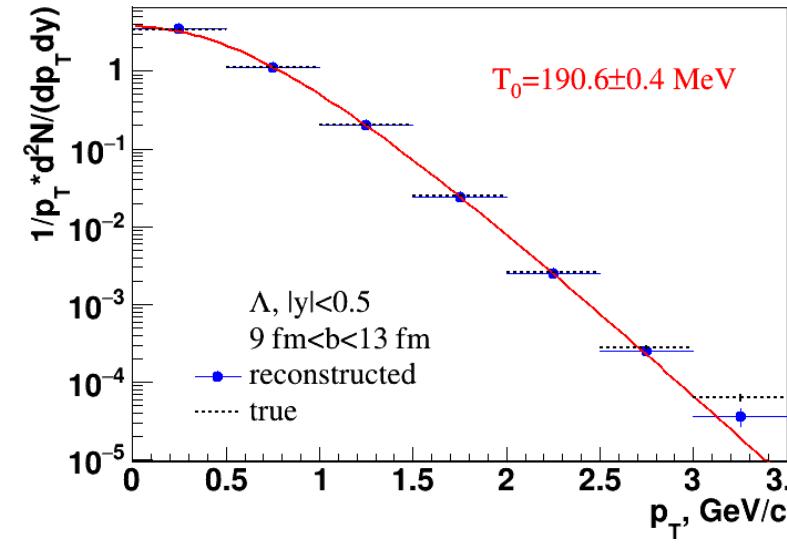

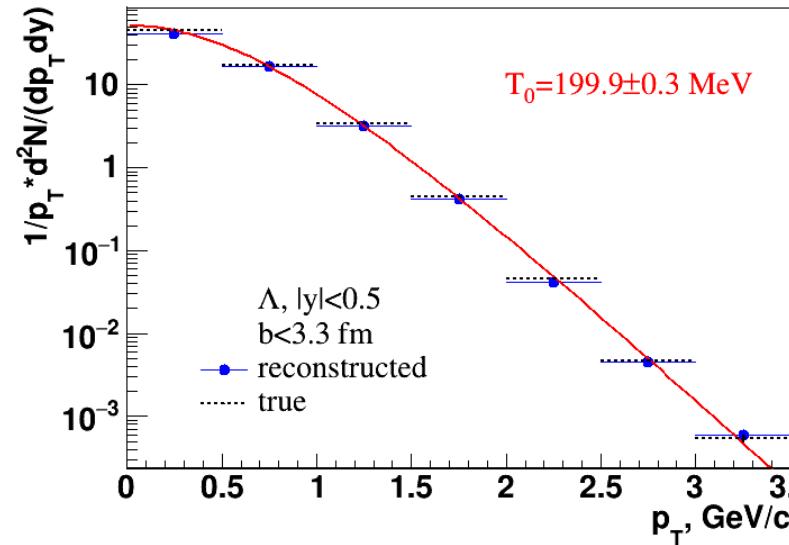

# Strange and multi-strange baryons

Stage'1 (TPC+TOF): Au+Au @ 11 GeV, PHSD + MPDRoot reco.

particle	$\Lambda$	anti- $\Lambda$	$\Xi^-$	anti- $\Xi^+$	$\Omega^-$	anti- $\Omega^+$
<b>yield in 10 weeks</b>	$3 \cdot 10^8$	$3.5 \cdot 10^6$	$1.5 \cdot 10^6$	$8.0 \cdot 10^4$	$7 \cdot 10^4$	$1.5 \cdot 10^4$

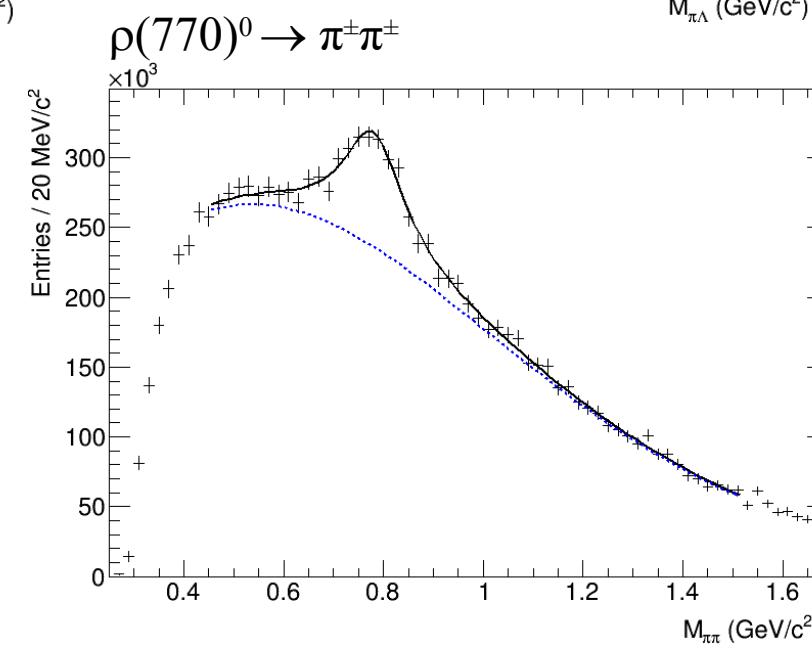

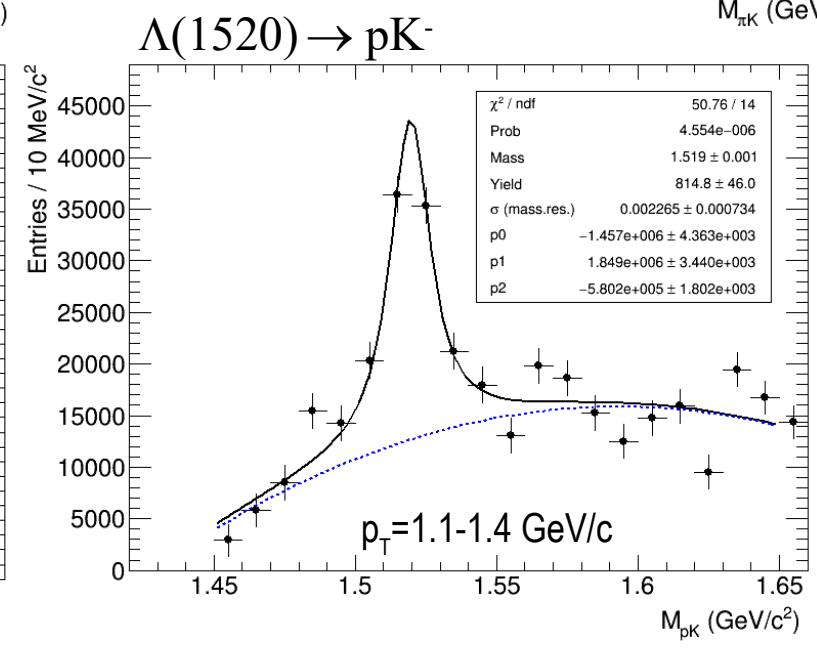

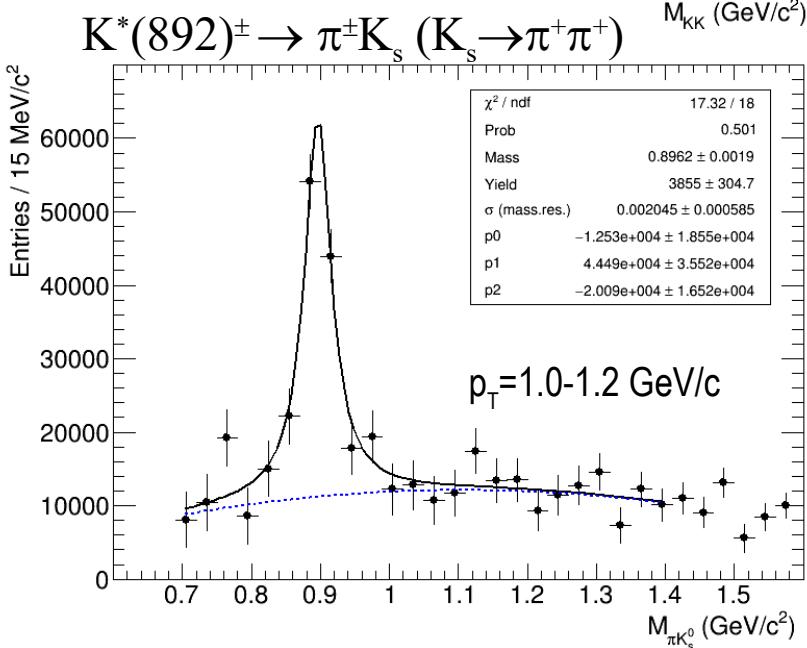

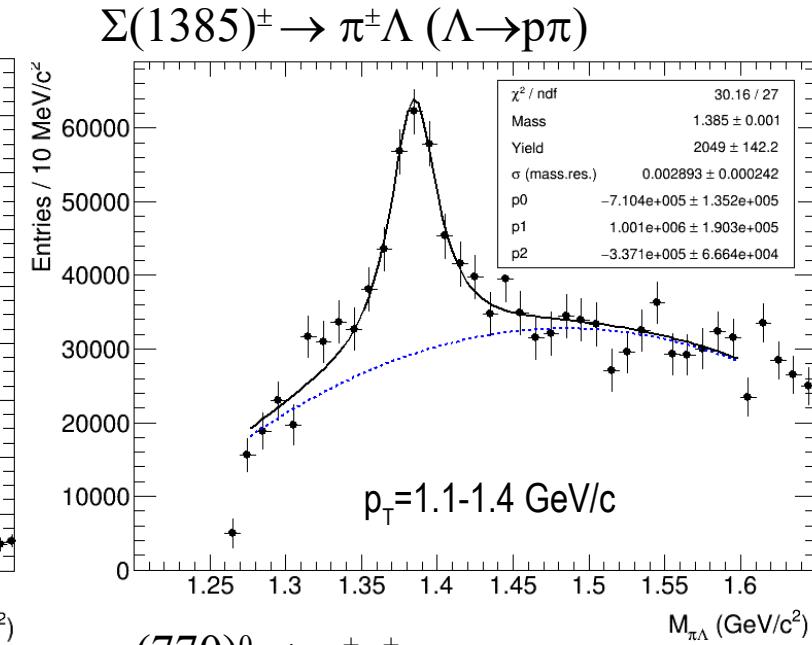

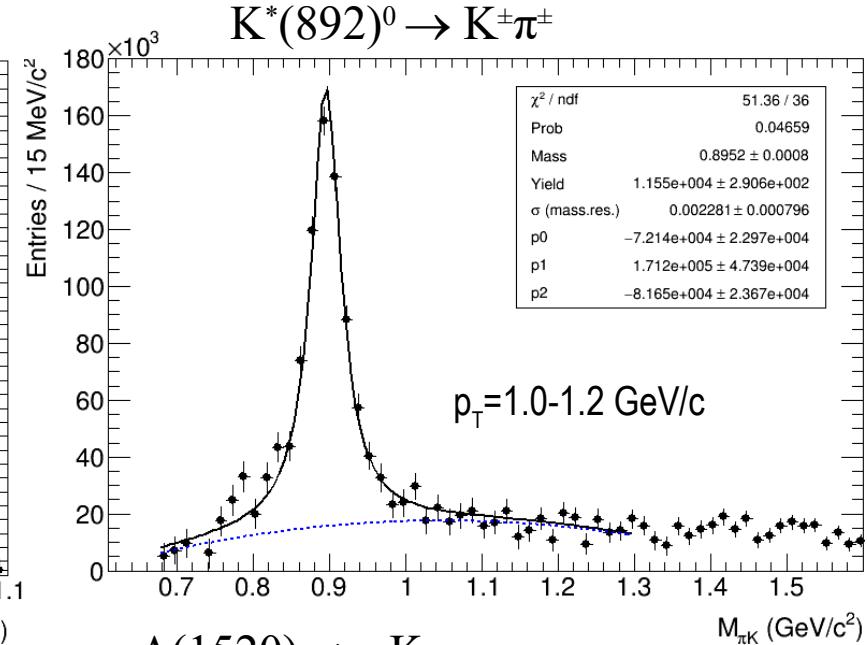

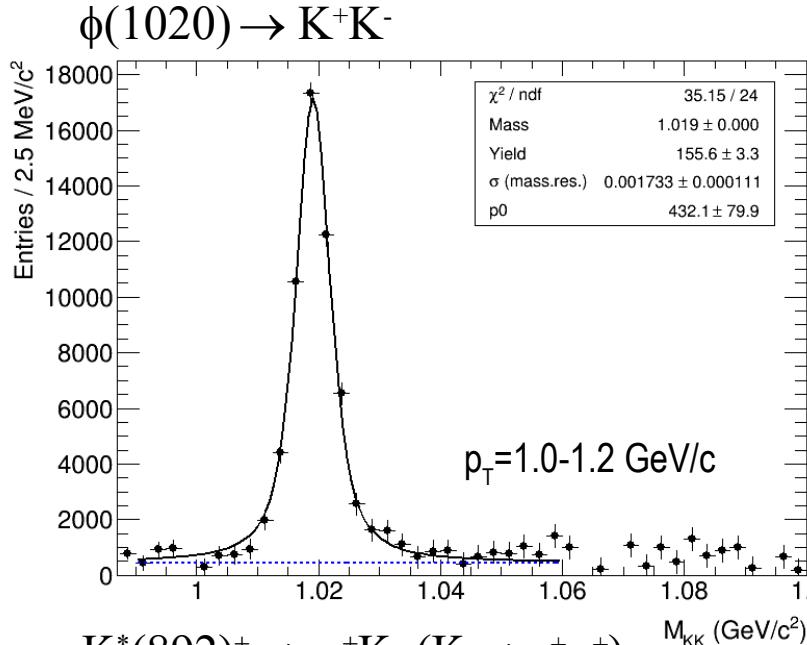

# Efficiency and $p_T$ spectrum

Full  $p_T$  spectrum and yield extraction, reasonable efficiency down to low  $p_T$

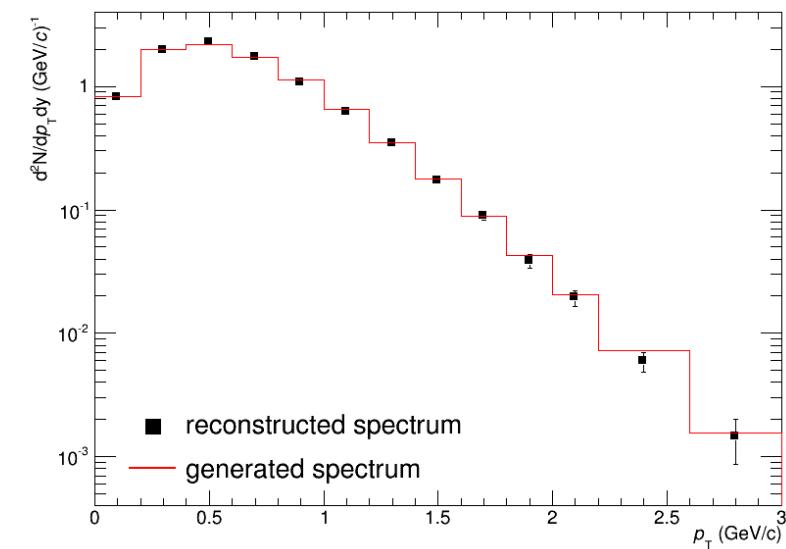

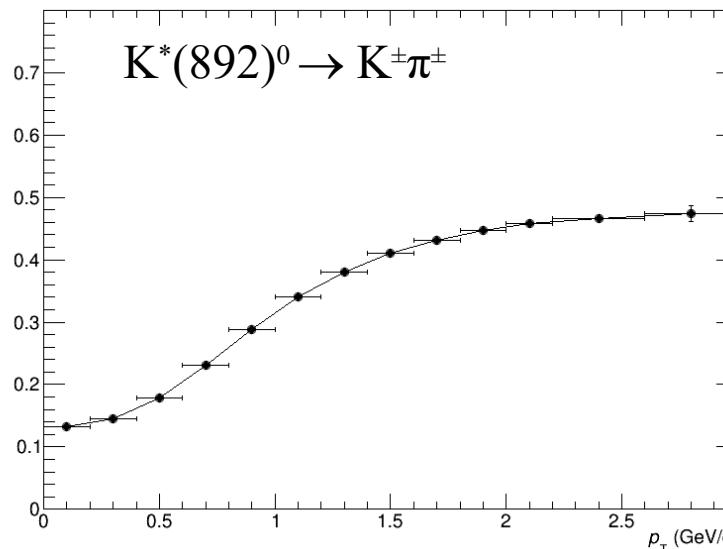

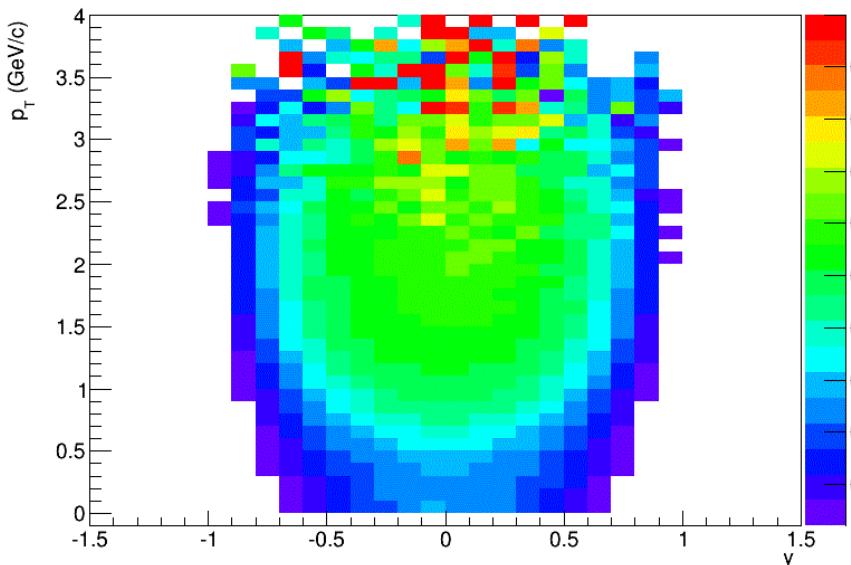

# Resonances at MPD

- Minbias Au+Au@11 (UrQMD)
- Full reconstruction and realistic PID
- Topology cuts and secondary vertex
- Event mixing for background

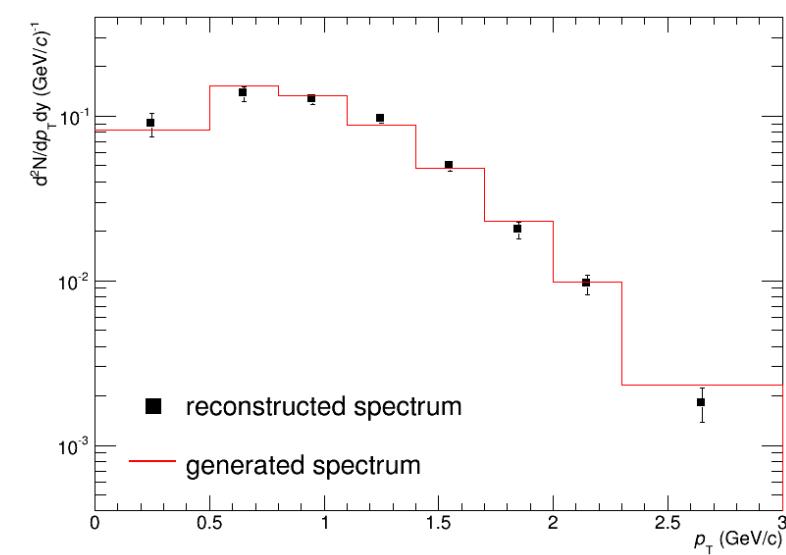

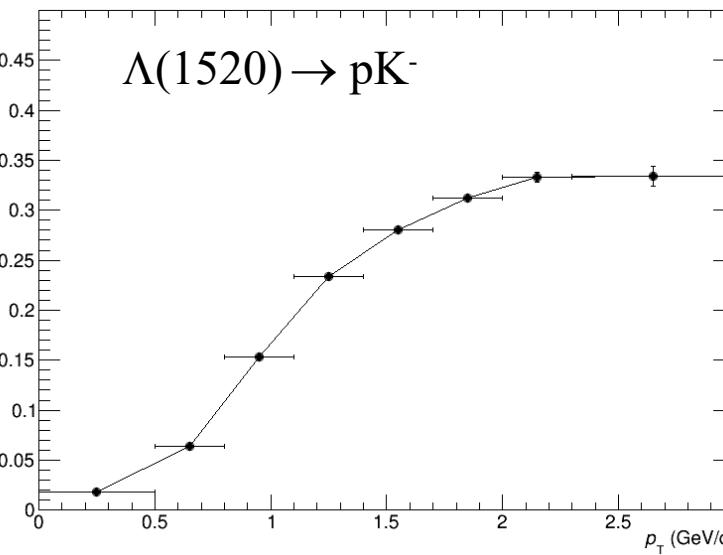

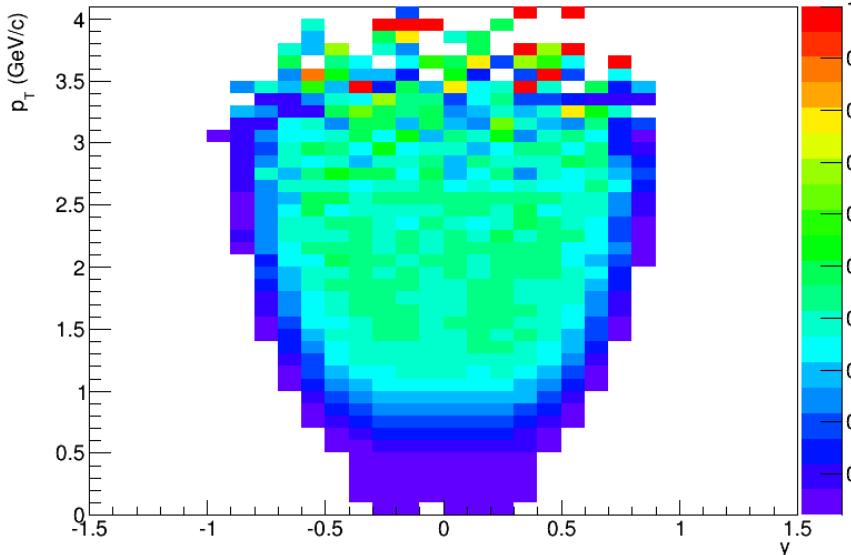

# Efficiencies and closure tests examples

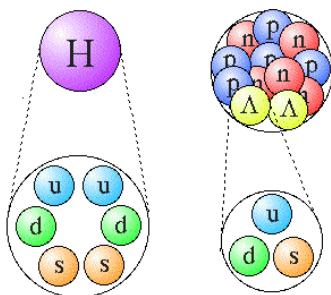

- Minbias Au+Au@11 (UrQMD) · Full reconstruction and realistic PID · Topology cuts and secondary vertex · Event mixing for background

Reconstruction efficiency

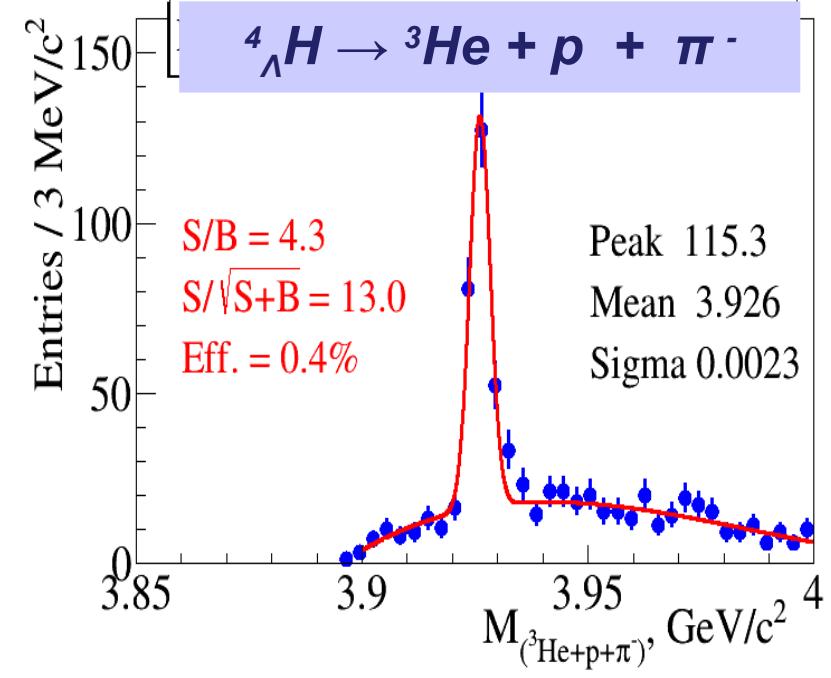

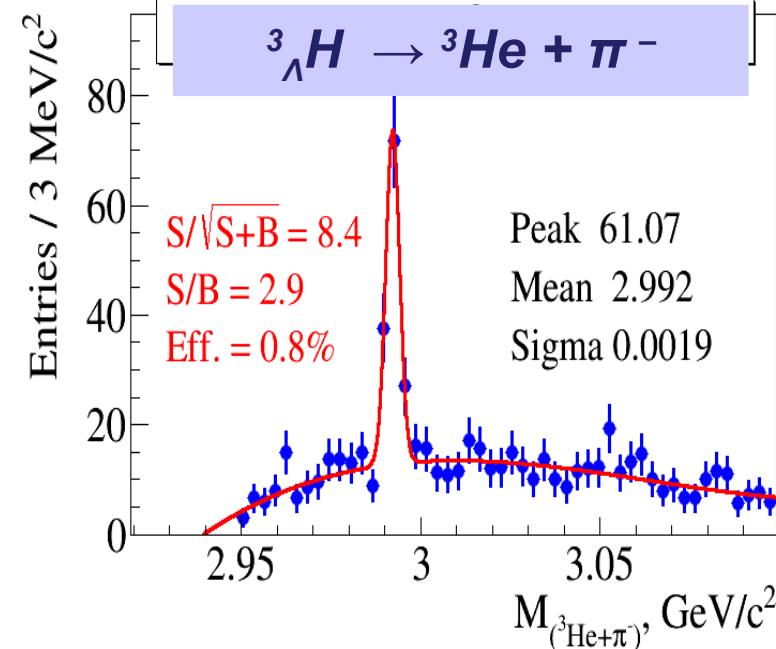

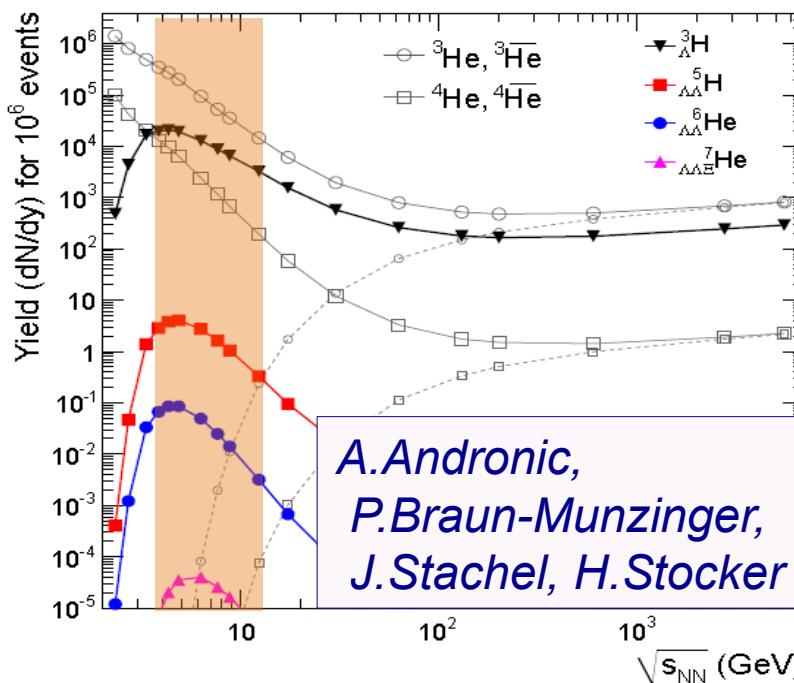

# Hypernuclei at MPD

*astrophysical research  
indicates the appearance of  
hyperons in  
the dense core  
of a neutron star*

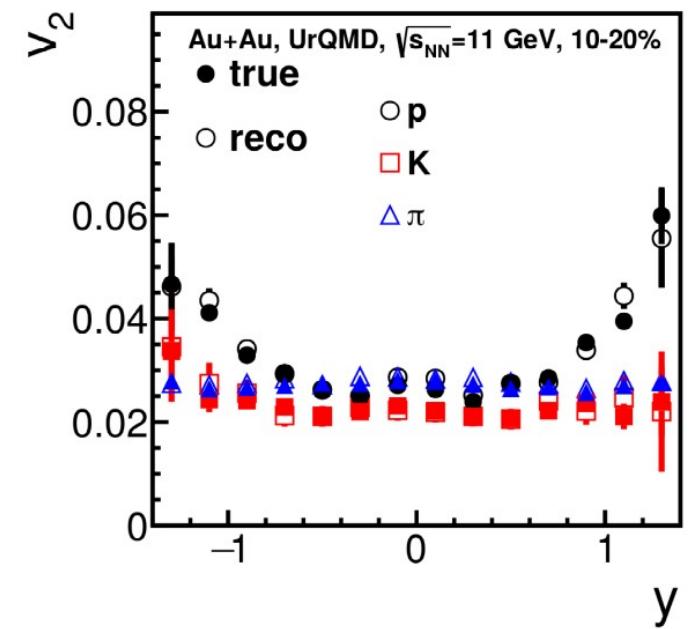

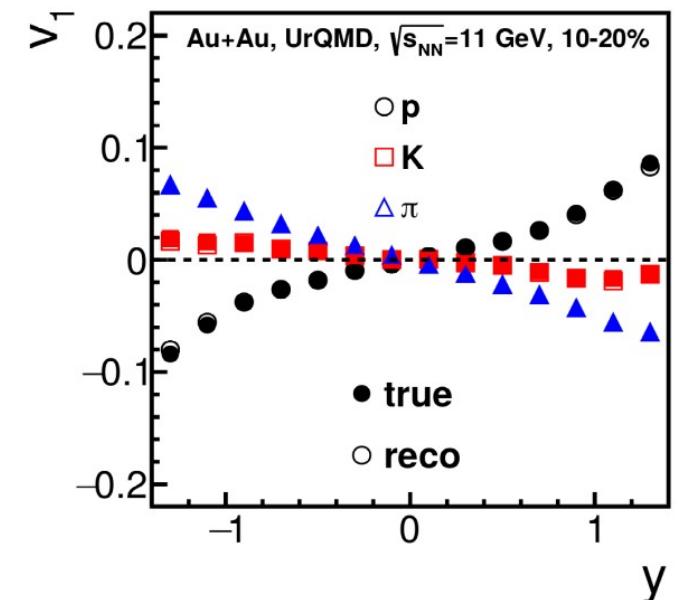

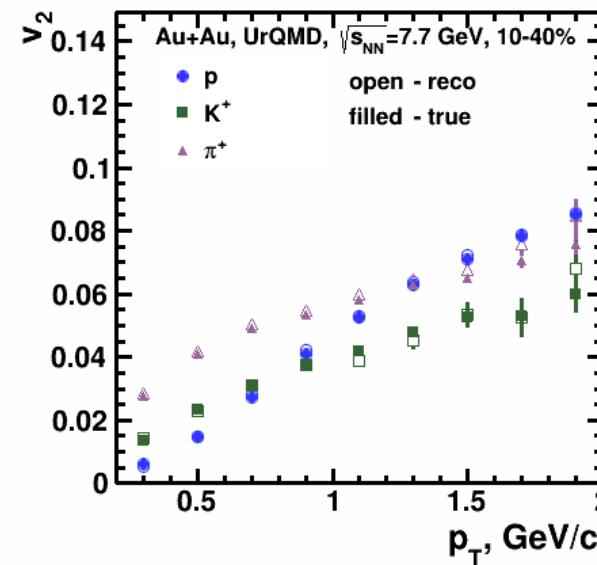

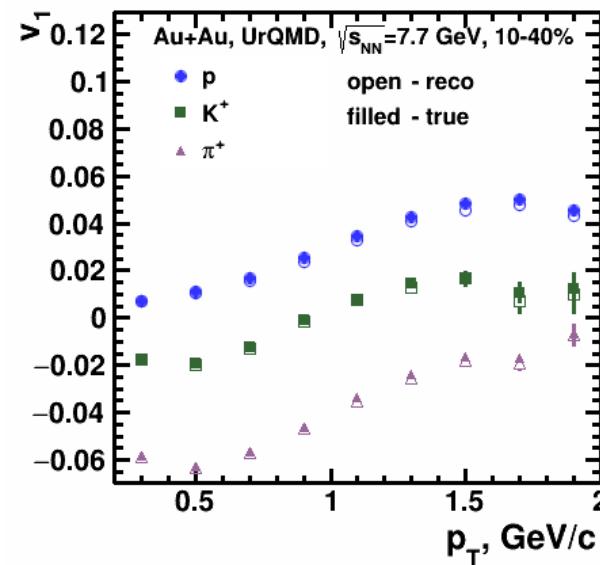

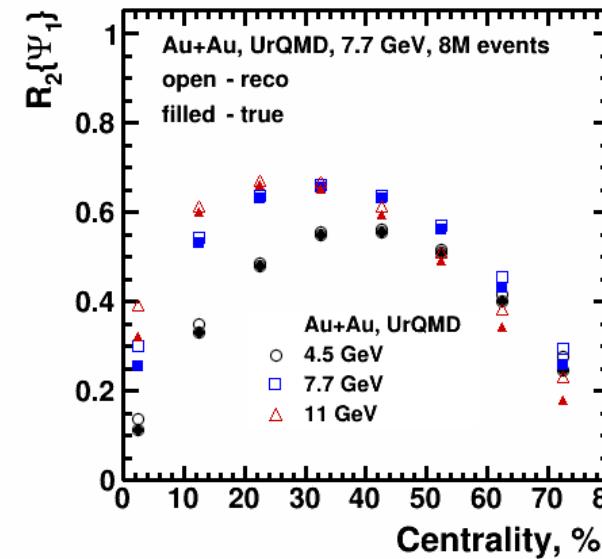

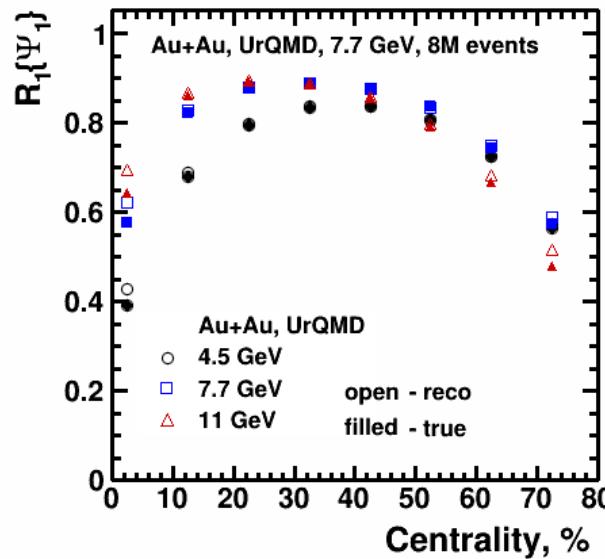

**Stage 2: central Au+Au @ 5 AGeV;  
DCM-QGSM**

hyper nucleus	yield in 10 weeks
$^3_{\Lambda}\text{He}$	$9 \cdot 10^5$
$^4_{\Lambda}\text{He}$	$1 \cdot 10^5$

# Performance of collective flow studies

Au+Au,  $\sqrt{s_{NN}} = 7.7, 11$  GeV, UrQMD, GEANT3 + MPDRoot reco.

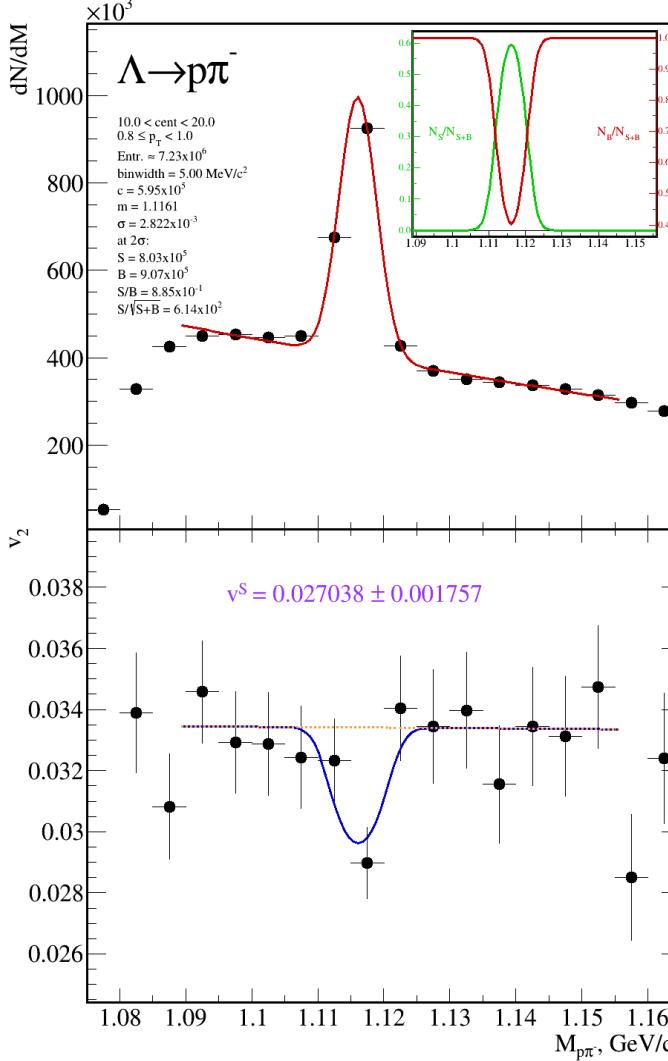

Collective flows a unique and direct way to probe EOS of QCD matter. Excellent flow measurement capabilities in MPD

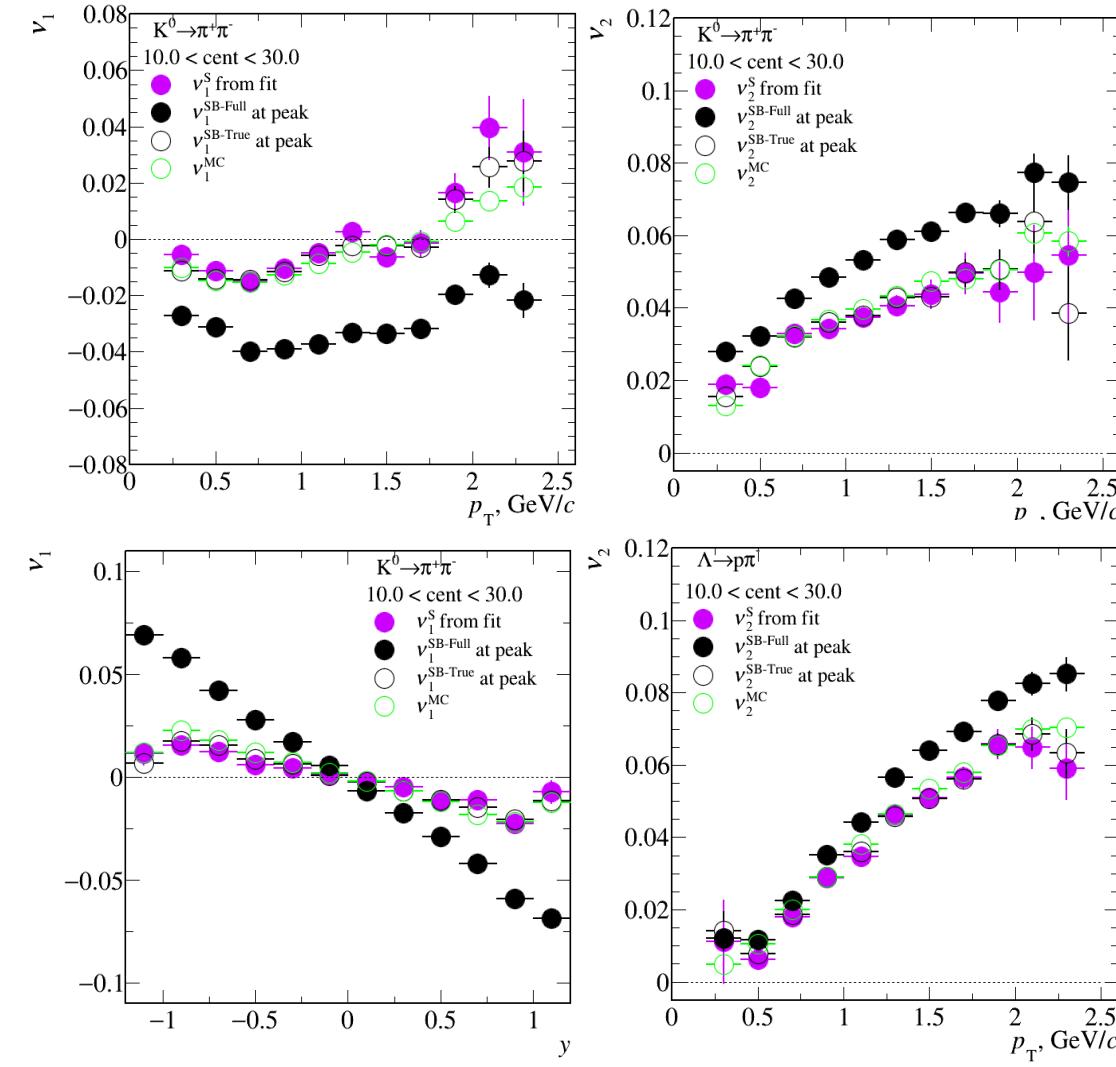

# Anisotropic Flow of Reconstructed Decays

$$v_2^{\text{SB}}(m_{\text{inv}}, p_T) = v_2^S(p_T) \frac{N^S(m_{\text{inv}}, p_T)}{N^{\text{SB}}(m_{\text{inv}}, p_T)} + v_2^B(m_{\text{inv}}, p_T) \frac{N^B(m_{\text{inv}}, p_T)}{N^{\text{SB}}(m_{\text{inv}}, p_T)}$$

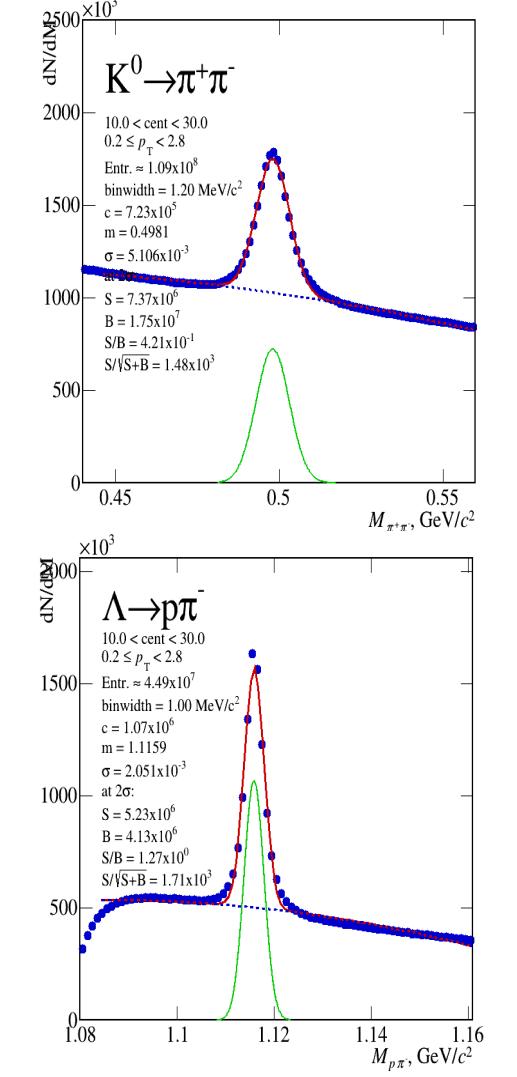

Extracted flow signal after fit  
Measured flow (s+bg) at peak region

Measured flow only for True  
Measured flow from MC/model

Cuts not optimised for S/B

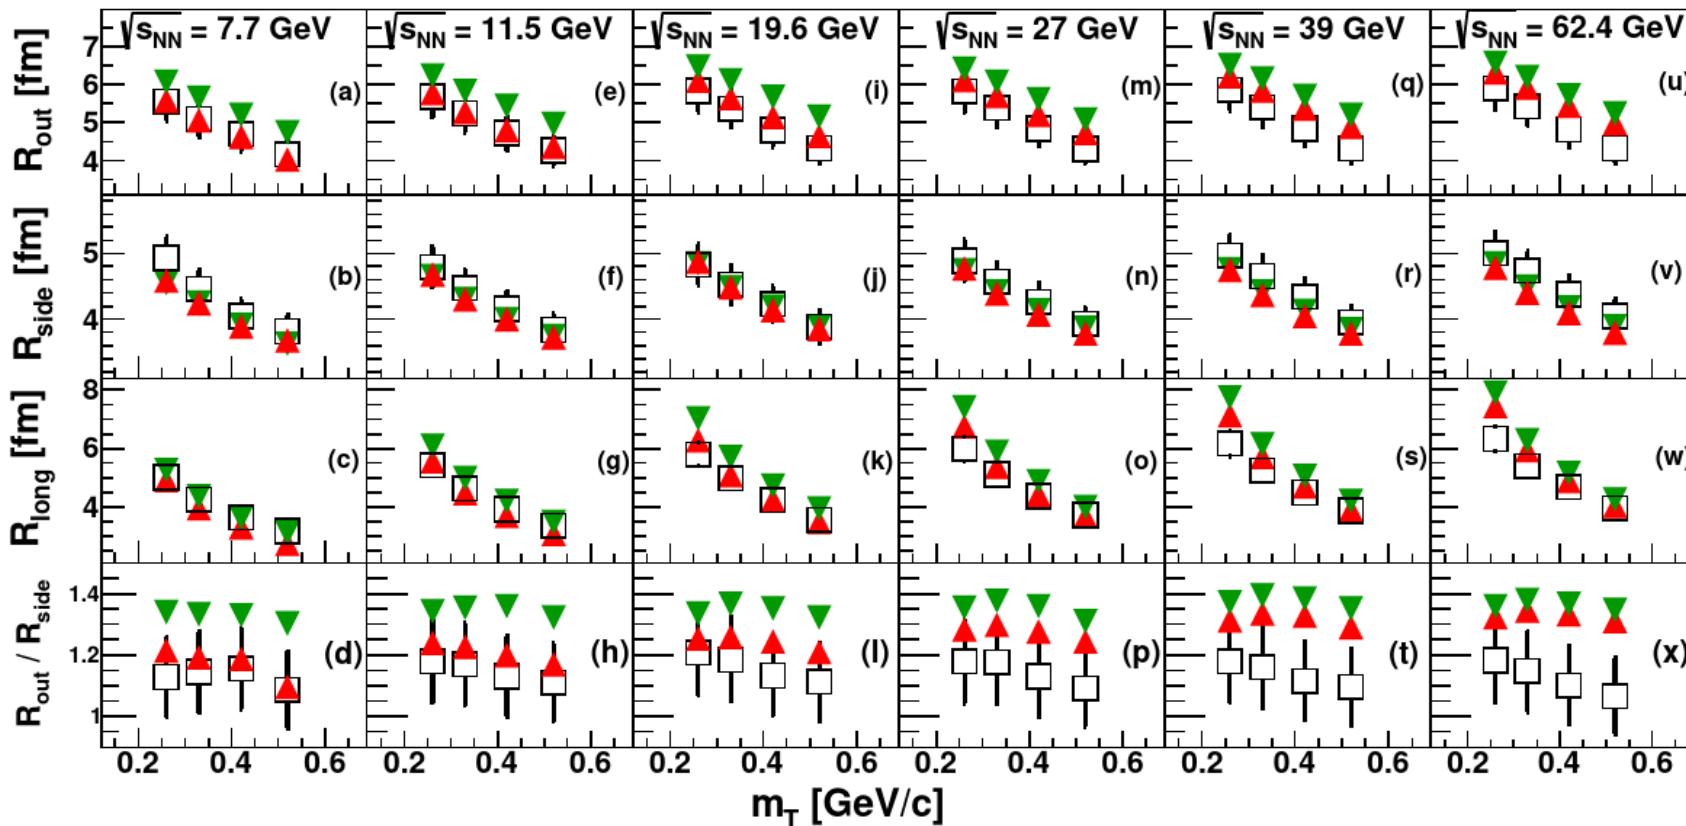

Performance of the MPD Detector for the Study of Multi-strange Baryon Production in Heavy-ion Collisions at NICA

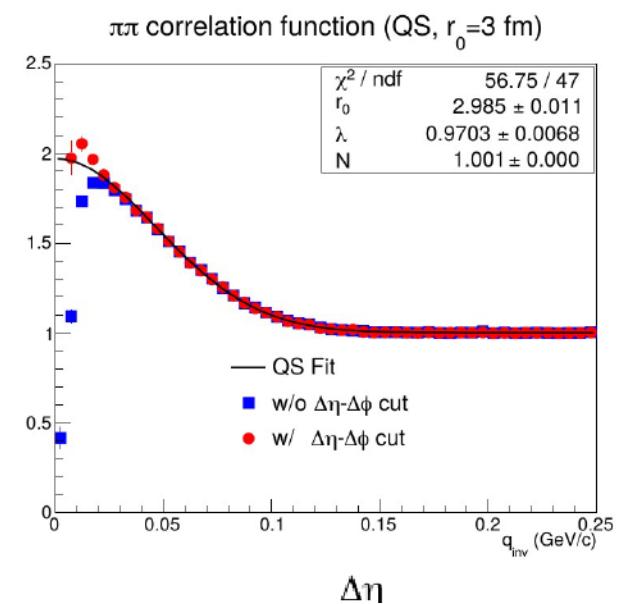

N. Gerakiev, V. Kolesnikov, V. Vasendina,  
 A. Zinchenko for the MPD Collaboration

# System size sensitive to phase transition

- Femtoscopy based on two-particle correlation technique (similar to HBT effect in astronomy) probes system size in HIC
- Measurement for pions straightforward and robust, large discovery potential in correlations for kaons and protons, as well as correlations including hyperons

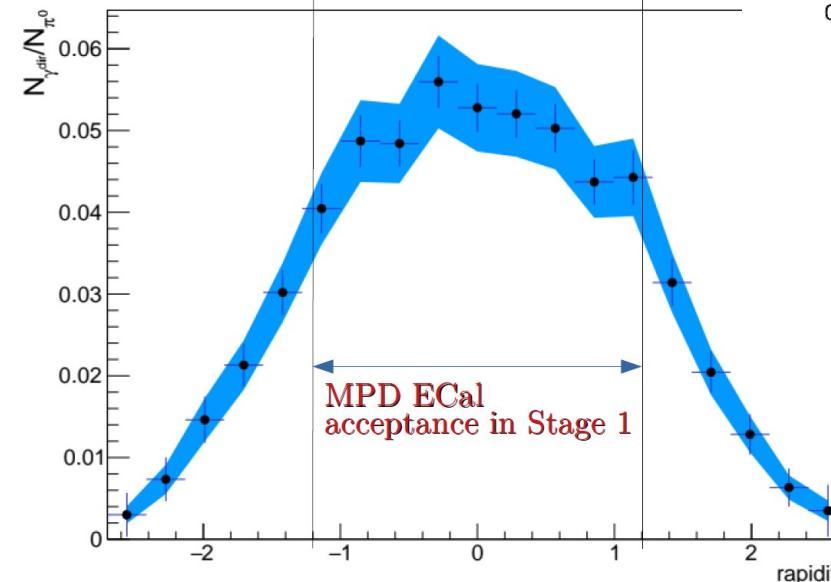

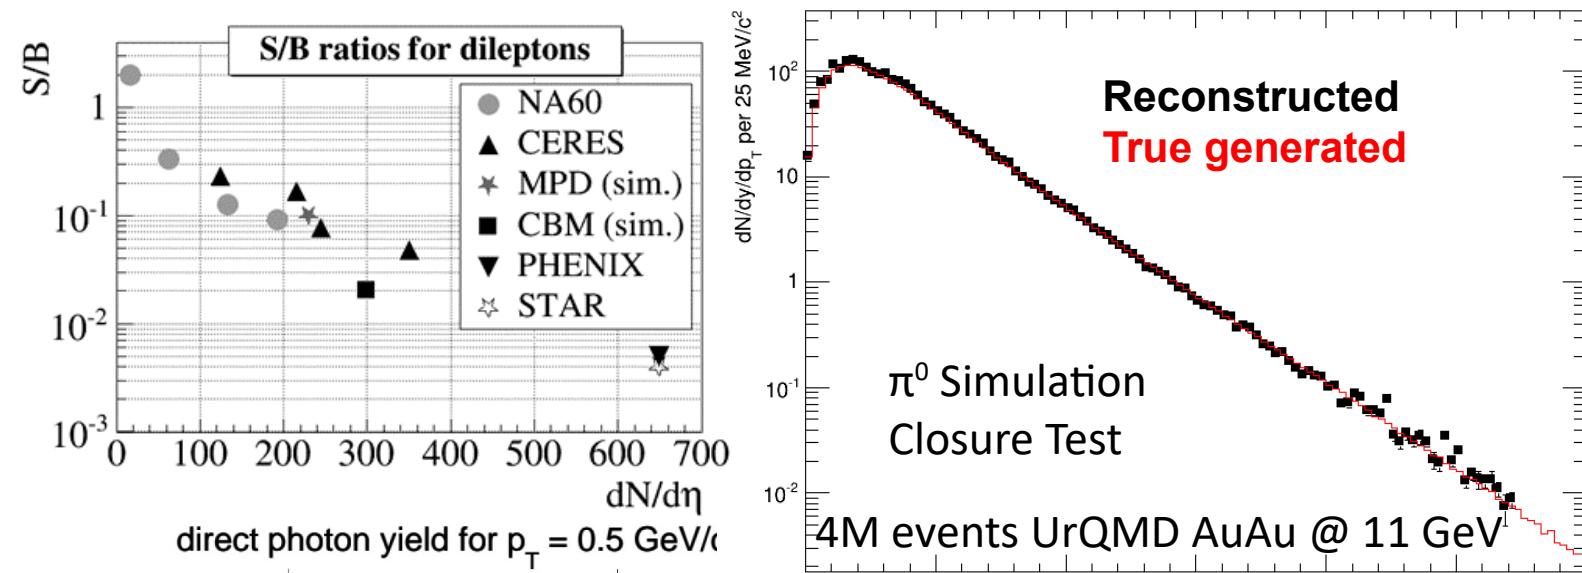

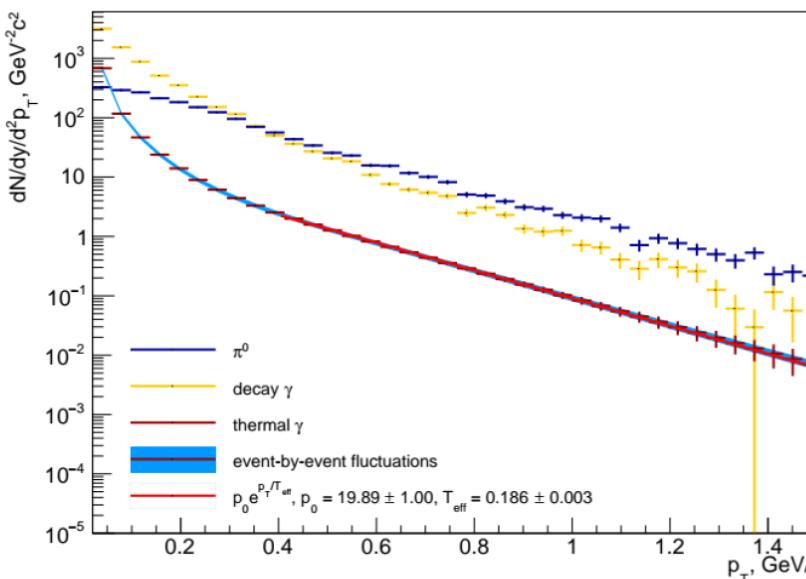

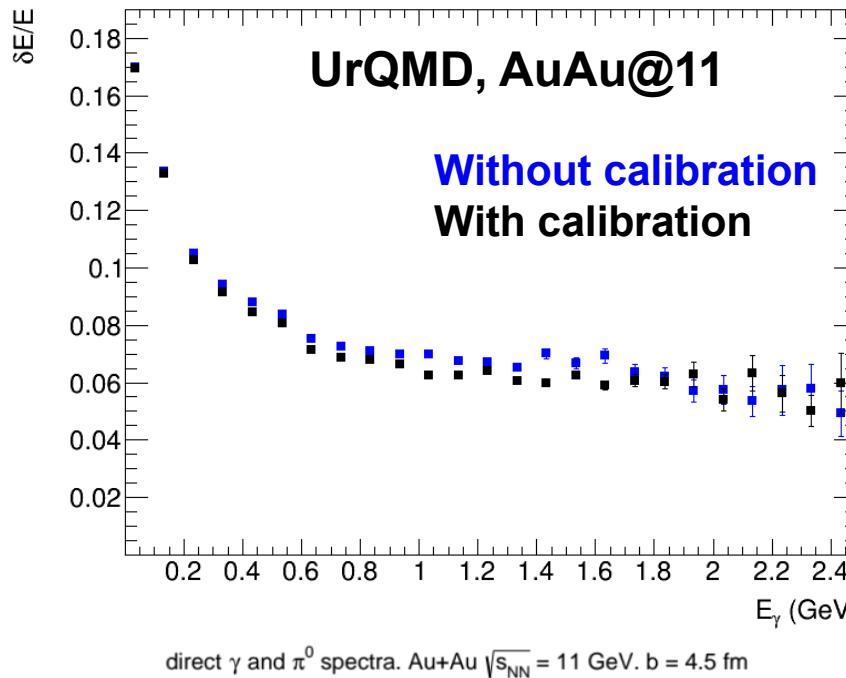

1st order phase transition  
cross-over transition

- Clear sensitivity of pion source size to the nature of the phase transitions
- Important and sensitive cross-check of detector performance (two-track resolution)

# Electromagnetic probes in ECAL

- Realistic ECAL reconstruction & analysis – large acceptance ECAL with good energy resolution: ideal tool for measurement of neutral mesons in a wide momentum range

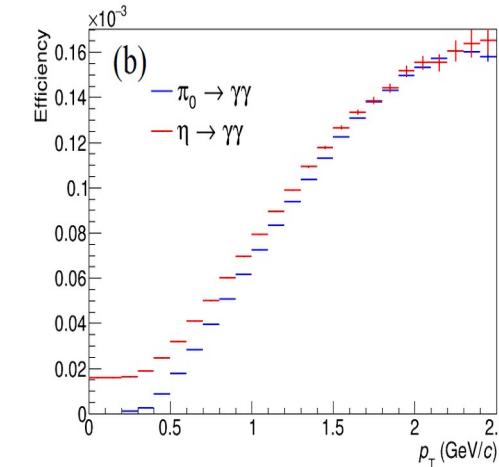

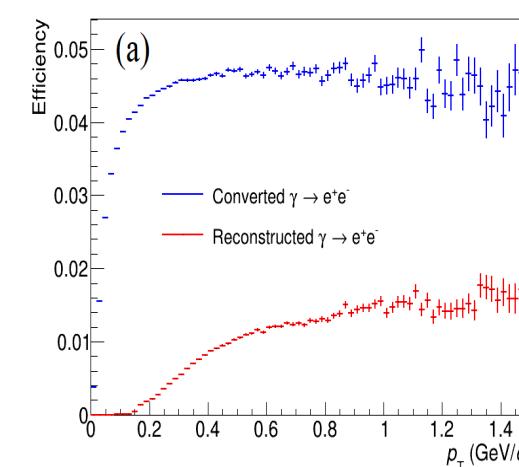

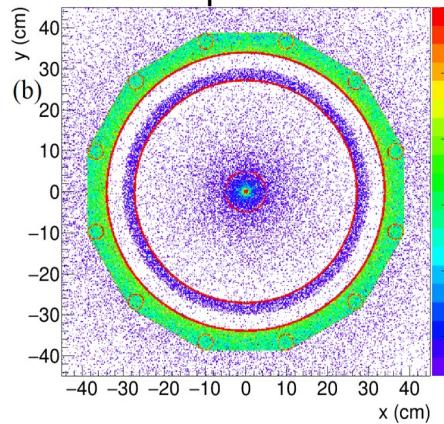

- Promising feasibility studies for prompt photon measurements in MPD

# $\pi^0$ and $\eta$ Reconstruction via conversion

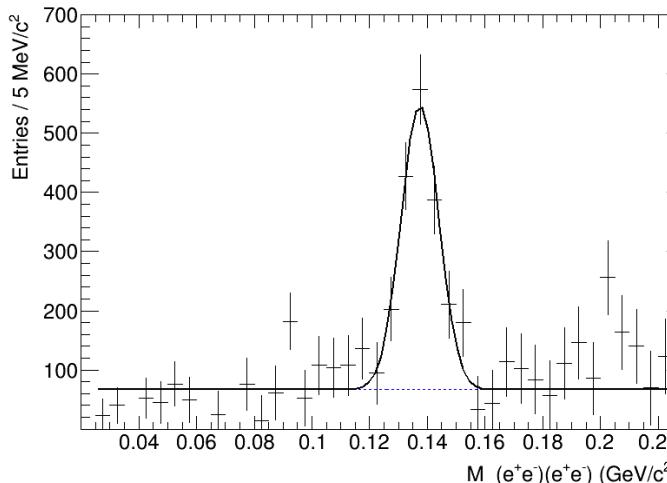

- Photon reconstruction, complimentary to ECAL
- Direct photons, neutral mesons, geometry scan etc ...
- Minbias AuAu@11, UrQMD - conversion on the beam pipe and inner layers of the TPC

Conversion points in MPD

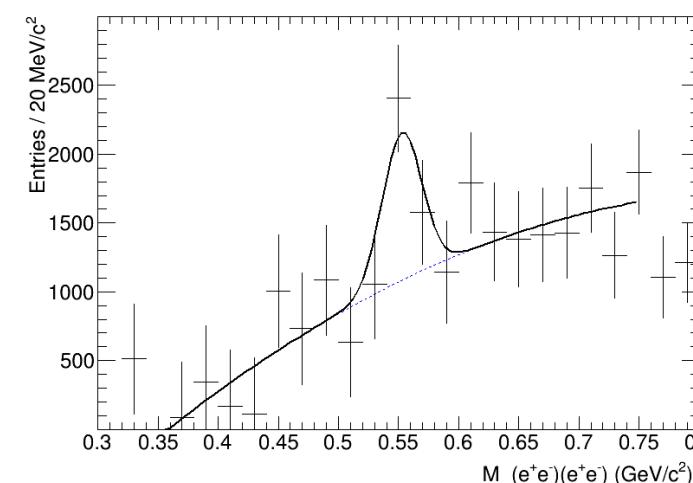

a)  $\gamma$ -conversion efficiency in the beam pipe & TPC vs  $p_T$   
 b) MPD efficiency for  $\pi^0$  and  $\eta$  reconstruction vs meson's  $p_T$

$$\pi^0 \rightarrow \gamma\gamma \rightarrow (e^+e^-)(e^+e^-)$$

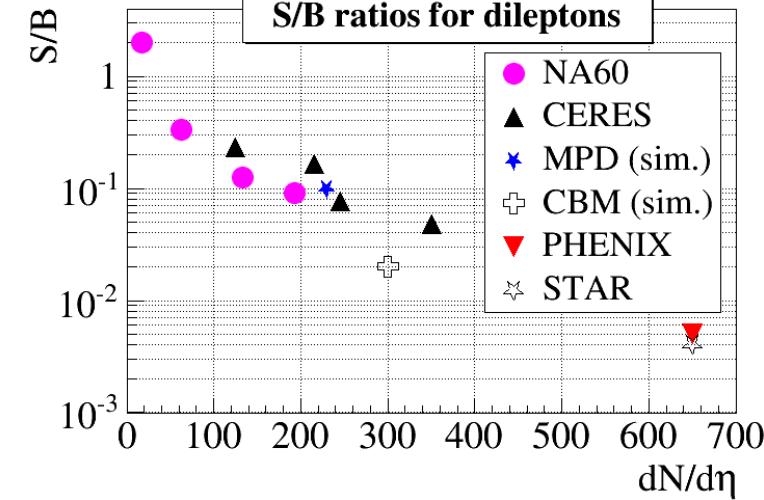

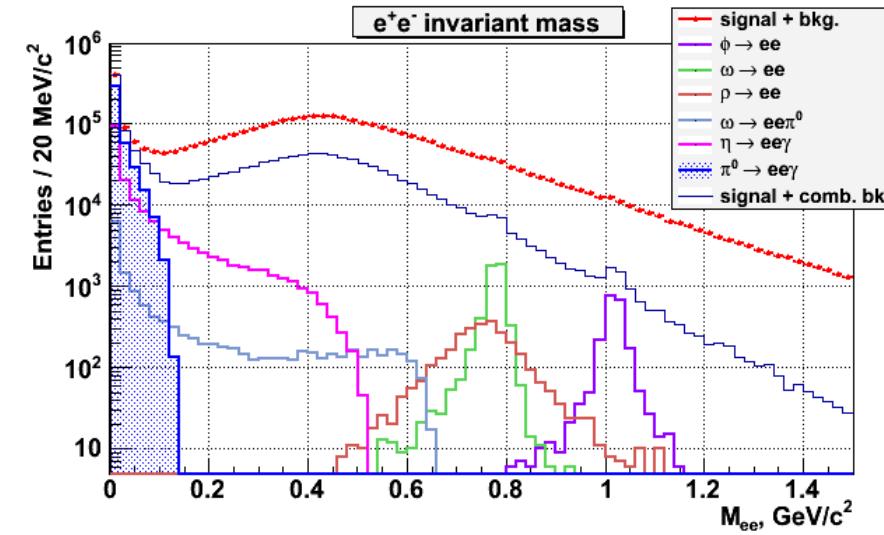

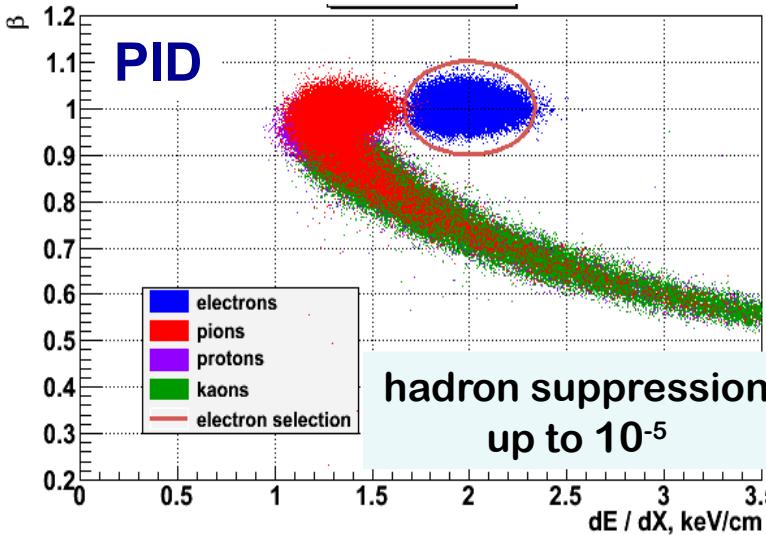

$$\eta \rightarrow \gamma\gamma \rightarrow (e^+e^-)(e^+e^-)$$

- Standard MPD configuration allows to reconstruct  $\pi^0$  and  $\eta$  via conversion pairs

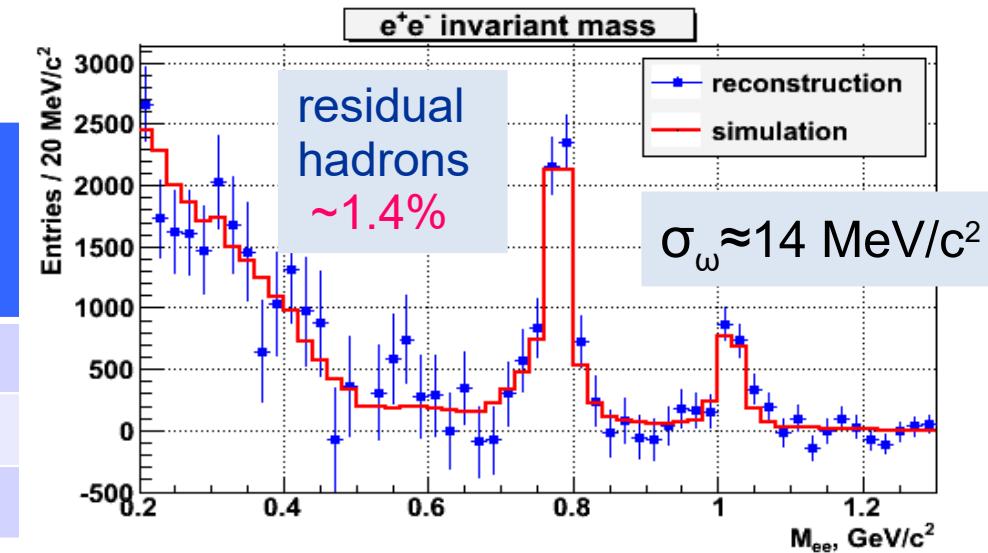

# Prospects of dilepton studies

- Event generator: UrQMD+Pluto (for the cocktail) central Au+Au @ 8 GeV
- PID:  $dE/dx$  (from TPC) + TOF ( $\sigma \sim 100$  ps) + ECAL

## Yields, central Au+Au at $\sqrt{s}_{NN} = 8.8$ GeV

Particle	Yields		Decay mode	BR	Effic. %	Yield /1 w
	4π	y=0				
$\rho$	31	17	$e+e-$	$4.7 \cdot 10^{-5}$	35	$7.3 \cdot 10^4$
$\omega$	20	11	$e+e-$	$7.1 \cdot 10^{-5}$	35	$7.2 \cdot 10^4$
$\phi$	2.6	1.2	$e+e-$	$3 \cdot 10^{-4}$	35	$1.7 \cdot 10^4$

# Summary

- The NICA Accelerator Complex in construction with important milestones achieved and clear plans for 2021 and 2022
- All components of the MPD 1<sup>st</sup> stage detector advanced in production, commissioning expected for 2021 and 2022
- Intensive preparations for the MPD Physics programme with initial beams at NICA
